Part I Charge States of Swift Ions

1 Charge Equilibrium	3
1.1 Introductory Comments	3
1.2 Qualitative Orientation	5
1.3 Stripping Criteria	6
1.3.1 Velocity Criterion	6
1.3.2 Energy Criterion	9
1.4 Thomas-Fermi Theory	11
1.4.1 Thomas-Fermi Equation for an Atomic Ion	11
1.4.2 Solution	13
1.4.3 Trial Function Approach	16
1.4.4 Examples of Trial Functions	18
1.4.5 Brandt-Kitagawa Theory	20
1.5 Effect of the Stopping Medium	22
1.5.1 Linear Theory	22
1.5.2 Application to Light Ions	25
1.5.3 Wake-Riding Electrons	26
1.5.4 Effect of Screening	27
1.6 Data	28
1.6.1 Gas-Solid Difference	29
1.6.2 Compilations	29
1.7 Discussion and Outlook	33
1.8 Appendix	34
1.8.1 Exchange Energy in the Thomas-Fermi Equation	34
1.8.2 Thomas-Fermi-Dirac Theory	36
Problems	39
References	39

2	Charge Exchange: Atomistics	45
2.1	Introductory Comments	45
2.2	Charge-Changing Events	46
2.3	Early Estimates	48
2.3.1	Double Scattering: The Thomas Process	48
2.3.2	Bohr's Model	50
2.4	Quantum Theory of One-Electron Capture ★	51
2.4.1	A Qualitative Estimate	51
2.4.2	General Considerations	53
2.4.3	Semiclassical Theory	53
2.4.4	First-Order Perturbation	57
2.4.5	Beyond First-Order Perturbation Theory	65
2.5	Multiple-Electron Systems	72
2.5.1	Classical Models	72
2.5.2	Data	76
2.6	Radiative Electron Capture ★	77
2.6.1	Detailed Balance	79
2.6.2	Photoemission	81
2.6.3	Examples	84
2.7	Electron Loss	85
2.7.1	Single and Multiple Loss	86
2.7.2	Theoretical Schemes	87
2.7.3	Data	89
2.8	Discussion and Outlook	89
	Problems	90
	References	91
3	Charge Exchange: Statistics and Energetics	97
3.1	Introductory Comments	97
3.2	Statistics of Charge and Excitation States	98
3.2.1	Transition Matrix	98
3.2.2	Rate Equations	100
3.2.3	Spontaneous Processes	101
3.2.4	Examples	101
3.2.5	Eigenvalue Expansion ★	106
3.3	Charge Equilibrium	106
3.3.1	Continuum Approximation ★	107
3.3.2	Gaussian Approximation	109
3.3.3	Gas-Solid Difference	110
3.4	Energetics of Charge Exchange ★	115
3.4.1	Definitions	115
3.4.2	Electron Capture: One Dimension	116
3.4.3	Planar Collision: Excitation only	117
3.4.4	Planar Collision: Electron Capture	119
3.4.5	Three-dimensional Collision: Electron Loss	119

3.4.6	Elastic and Inelastic Energy Loss	120
3.4.7	Radiative Electron Capture	122
3.4.8	Spontaneous Processes	122
3.5	Statistics of Energy Loss and Charge Exchange	123
3.5.1	Generalized Bothe-Landau Formula	123
3.5.2	Transport Equations	125
3.5.3	Mean Energy Loss	125
3.5.4	State-Specific Mean Energy Loss ★	129
3.5.5	Straggling	133
3.5.6	Energy-Loss Profiles	138
3.6	Discussion and Outlook	141
	Problems	142
	References	143

Part II Energy Loss of Swift Ions

4	Stopping	149
4.1	Introductory Comments	149
4.2	Experiments	151
4.3	Effective Charge and its Problems	152
4.4	Bohr Theory Extended	156
4.4.1	Low-Speed Limit	156
4.4.2	Screening	156
4.4.3	Charge Dependence	158
4.5	Binary Stopping Theory and PASS Code	158
4.5.1	The Kernel	159
4.5.2	Multiple-Electron Atoms	161
4.5.3	Projectile Excitation and Ionization	163
4.5.4	Extension into the Bethe Regime	165
4.5.5	Shell Correction	165
4.5.6	Relativistic Effects	166
4.6	PCA/UCA Approximation and CasP Code	166
4.6.1	The Kernel	167
4.6.2	Extensions	168
4.7	Transport Cross Section	169
4.7.1	A General Remark	170
4.7.2	Generalized Friedel Sum Rule	171
4.7.3	Convergent Kinetic Theory (CKT)	173
4.8	Applications	174
4.8.1	Equilibrium Stopping Forces from PASS and CasP	174
4.8.2	Equilibrium Stopping Forces from Empirical Tabulations	177
4.8.3	Charge-Dependent Stopping	178
4.8.4	Stopping in Compound Materials	182
4.9	Impact-Parameter-Dependent Energy Loss ★	183
4.9.1	Local-Density Approximation	184

4.9.2	Born Approximation	185
4.9.3	PCA/UCA Approximation	185
4.9.4	Binary Theory	185
4.9.5	Examples	187
4.10	Discussion and Outlook	188
	Problems	190
	References	190
5	Straggling	197
5.1	Introductory Comments	197
5.2	General Considerations	198
5.2.1	Validity of the Gaussian Approximation	200
5.2.2	Correlated and Uncorrelated Straggling	200
5.3	Uncorrelated Straggling	201
5.3.1	Screening	202
5.3.2	Transition to the Bethe regime	204
5.3.3	Shell and Barkas-Andersen correction	204
5.3.4	Projectile Excitation and Ionization	205
5.3.5	Relativity	206
5.3.6	Electron Capture	207
5.3.7	Short Summary of Linear Straggling	207
5.4	Bunching and Packing	207
5.4.1	Statistics	208
5.4.2	Bunching: Atoms	210
5.4.3	Packing: Molecules	212
5.4.4	Packing: Solids	214
5.5	Charge-Exchange Straggling	218
5.5.1	Neglecting Energy Loss by Charge Exchange?	218
5.5.2	Examples	219
5.6	Dielectric Theory	221
5.6.1	Recapitulation	221
5.6.2	Local-Density Approximation	223
5.6.3	Empirical Extension to Heavier Ions	223
5.7	Data	225
5.8	Discussion and Outlook	226
	Problems	229
	References	229

Part III Scattering

6	Interatomic Potentials, Scattering and Nuclear Stopping	235
6.1	Introductory Comments	235
6.2	Potentials	236
6.2.1	Bohr's Estimate	237
6.2.2	Thomas-Fermi Theory	240
6.2.3	Other Binary Potentials	245
6.2.4	Nonbinary Potentials	249
6.2.5	Power Potentials	250
6.3	Screened-Coulomb Scattering	250
6.3.1	Limitations of Classical Elastic-Scattering Theory	251
6.3.2	Recapitulation	254
6.3.3	Lindhard-Scharff Scaling	255
6.3.4	Comparison of Differential Cross Sections	258
6.3.5	Inversion	259
6.3.6	Scattering Experiments	261
6.3.7	Shadow Cone	266
6.4	Nuclear Stopping	267
6.4.1	Scaling Properties	268
6.4.2	Power Cross Section	269
6.4.3	Straggling	271
6.4.4	Measurements of Nuclear Stopping	272
6.5	Discussion and Outlook	274
	Problems	275
	References	276
7	Multiple Scattering	281
7.1	Introductory Comments	281
7.2	Needs	282
7.3	Statistics: Angular Distributions	283
7.3.1	Two-Layer Argument	284
7.3.2	Expansion in Legendre Polynomials	284
7.3.3	Small-Angle Approximation	287
7.3.4	Bothe Formula	288
7.3.5	Collision Counting*	289
7.3.6	Excursion into Truncated Cross Sections*	292
7.3.7	Transport Equation	293
7.3.8	Projected Distribution	294
7.3.9	Packing	294
7.4	Statistics: Correlated Distributions ★	296
7.4.1	Lateral-Angular Distribution	296
7.4.2	Energy-Angular Distribution	297
7.4.3	Effect of Charge Exchange	299

7.5	Approaches	299
7.5.1	Moments and Cumulants	299
7.5.2	Diffusion Limit	300
7.5.3	An Integrable Example	302
7.5.4	Transition to Single Scattering	303
7.5.5	Bohr-Williams Model	304
7.5.6	Simulation	306
7.6	Angular Distribution	306
7.6.1	Scaling properties	306
7.6.2	Relativity	309
7.6.3	Weak Screening	309
7.6.4	Numerical Results	312
7.6.5	Measurements	315
7.6.6	Special Aspects	316
7.7	Lateral Distribution	318
7.7.1	Scaling Properties	318
7.7.2	Power Scattering	320
7.7.3	Numerical Results	321
7.7.4	Measurements	321
7.7.5	Packing	323
7.7.6	Angular-Lateral Distribution	325
7.8	Energy-Angular Distribution	325
7.8.1	Separation of Nuclear from Electronic Stopping	327
7.8.2	Angular Scan	329
7.8.3	Trajectory Inversion	332
7.9	Discussion and Outlook	334
	Problems	334
	References	335

Part IV Slow Ions

8	Stopping of Slow Ions	343
8.1	Introductory Comments	343
8.2	Velocity-proportional Stopping?	344
8.2.1	Stokes' Law	345
8.2.2	Z_1 Structure	346
8.2.3	Reciprocity	346
8.2.4	Threshold Behaviour	349
8.3	Experimental Aspects	350
8.3.1	Problems and Tools	350
8.3.2	Data	352
8.3.3	Stopping in Crystals	358
8.4	Limitations to Additivity ★	359
8.4.1	Conservation Laws in Inelastic Collisions	360
8.4.2	Mean Energy Loss	361

8.5	Free Target Electrons	362
8.5.1	Lindhard Theory	362
8.5.2	Transport Cross Section	365
8.5.3	Fermi Gas	366
8.5.4	Born Approximation	366
8.5.5	Screening	367
8.5.6	Partial Waves	368
8.5.7	Local-Density Approximation	373
8.5.8	Lindhard-Scharff Formula	377
8.6	Bound Target Electrons	378
8.6.1	Electron Promotion	379
8.6.2	Firsov Theory	379
8.6.3	Dependence on Atomic Radius	381
8.6.4	Modifications	382
8.6.5	Numerical Procedures	383
8.7	Transition to Higher Energies	388
8.8	Straggling *	390
8.8.1	General Considerations	390
8.8.2	Free Target Electrons	392
8.8.3	Bound Target Electrons	398
8.8.4	Comparison with Experiment	400
8.9	Discussion and Outlook	401
8.10	Appendix	403
8.10.1	The WKB Method	403
8.10.2	Friedel Sum Rule	405
8.10.3	Density Functional Theory	407
	Problems	408
	References	409
9	Range and Energy Deposition	417
9.1	Introductory Comments	417
9.1.1	Recapitulation	418
9.1.2	Needs	420
9.2	Pathlength	420
9.2.1	Integral Equation	421
9.2.2	Moments	422
9.2.3	Simple Solutions	423
9.2.4	Profiles	424
9.2.5	Input	425
9.2.6	Scaling Properties	425
9.2.7	Power Cross Section	428
9.3	Projected and Lateral Range	430
9.3.1	Integral Equation	430
9.3.2	Range Parameters	431
9.3.3	Input	432

9.3.4	Mean Range	434
9.3.5	Higher Moments	436
9.3.6	Charge Exchange	441
9.4	Deposited Energy	444
9.4.1	Nuclear and Electronic Processes	445
9.4.2	Zero-Order Moments	445
9.4.3	Higher Moments	452
9.5	Range and Energy-Deposition Profiles	455
9.5.1	Construction from Moments	455
9.5.2	Direct Methods	459
9.5.3	Simulation Codes	461
9.5.4	Measurements	463
9.6	Fluctuations and Correlations	469
9.7	Discussion and Outlook	471
	Problems	472

Part V Penetration of Aggregates

10	Penetration of Molecules and Clusters	481
10.1	Introductory Comments	481
10.2	Coulomb Explosion	482
10.2.1	Dynamics	482
10.2.2	Time Constant	484
10.2.3	Transformation to the Laboratory Frame	484
10.2.4	Energy and Angular Spectra	486
10.3	Multiple Scattering	487
10.3.1	Independent Atoms	487
10.3.2	Correlated Scattering	488
10.3.3	Examples	489
10.4	Energy Loss	491
10.4.1	Qualitative Considerations	492
10.4.2	Born Approximation	493
10.4.3	Classical Theory	499
10.4.4	Dielectric Theory	503
10.4.5	Large Clusters	509
10.5	Charge State	511
10.5.1	Observations	511
10.5.2	Qualitative Considerations	512
10.5.3	Estimates	513
10.6	Correlations	518
10.6.1	Ring Patterns	519
10.6.2	Coulomb Explosion and Multiple Scattering	519
10.6.3	Coulomb Explosion and Energy Loss	523
10.6.4	Wake Effects	525

10.7 Applications	528
10.7.1 Energy Deposition	528
10.7.2 Coulomb Imaging	529
10.8 Discussion and Outlook	530
10.9 Appendix: Polarization Wake	530
10.9.1 Point Charge	530
10.9.2 Screened Ions	538
Problems	539
References	541

Part VI Penetration through Crystals

11 Channeling and Blocking of Energetic Particles in Crystals	549
11.1 Introduction	550
11.2 Collision with String of Atoms	552
11.2.1 Continuum Model	553
11.2.2 Screened Potential	553
11.2.3 Lindhard's Critical Angle	555
11.2.4 Thermal Vibrations	556
11.2.5 Dip in Yield	557
11.3 Planar Channeling	557
11.4 Channeling of Electrons and Positrons	558
11.5 Channeling Radiation	561
11.6 Dechanneling	564
11.7 Applications	565
11.7.1 Dechanneling by Crystal Defects	565
11.7.2 Localization of Impurities by Channeling and Blocking ...	567
11.7.3 Crystal Blocking for Determination of Nuclear Lifetimes ...	570
11.8 Restricted Equilibrium in Axial Channeling	572
11.9 Cooling and Heating in Ion Transmission through Crystals	575
11.10 Secondary Processes	579
11.10.1 Energy Loss for Channeled Particles	579
11.10.2 Crystal as Special Target for Atomic Processes	583
11.11 Concluding Remarks	584
References	585
Author and Subject Index	589

Particle Penetration and Radiation Effects Volume 2

Penetration of Atomic and Molecular Ions

Sigmund, P.

2014, XXIX, 603 p. 286 illus., 97 illus. in color.,

Hardcover

ISBN: 978-3-319-05563-3
