Part I Basic Concepts

1 Stress and Strain	3
1.1 Stress	4
1.2 Strain	5
1.2.1 Simple Shear	6
1.2.2 Homogeneous and Inhomogeneous Strain	7
1.2.3 Extensional and Compressional Structures	8
1.2.4 Strain Ellipsoid	10
1.2.5 Strains Associated with Homogeneous Deformation	11
1.2.6 Pure Shear	12
1.3 Flinn Diagram	13
1.4 Determination of Finite Strain: Precautions	14
References	15
2 Anisotropy of Magnetic Susceptibility	17
2.1 Different Forms of Magnetization	18
2.2 Anisotropy of Magnetic Susceptibility	19
2.3 Equipment	20
2.4 Collection of Samples	21
2.4.1 Importance of Sampling in an Area	23
2.5 Magnetic Anisotropy	24
2.5.1 Mean Susceptibility (Km)	25
2.5.2 Magnitude of Anisotropy	25
2.6 Different Types of AMS Fabrics	26
2.7 Plotting of Magnitude and Shape of Susceptibility Ellipsoid	26
2.7.1 Jelinek Plot (Shape Plot)	28
2.7.2 Plotting of the Principal Axes	30
2.8 Hrouda Diagram	31
References	33

3	Folds and Folding	35
3.1	Fold Geometry	36
3.2	Fold Classification	43
3.2.1	Class 1, Convergent	43
3.2.2	Class 2, Folds with Parallel Isogons (Similar)	45
3.2.3	Class 3, Divergent	45
3.3	Why Folds Develop	46
3.4	Selection of Wavelength	48
3.5	Zone of Contact Strain	51
3.6	Development of Multilayer Folds	52
3.7	Development of Sinusoidal Buckles in Experiments	54
3.7.1	Construction of Multilayer Plasticine/Modeling Clay Models	54
3.7.2	Biaxial Press	55
3.8	Development of Flexural Slip Folds	59
3.9	Development of Asymmetric Folds	65
3.10	Development of Noncylindrical Folds	67
3.10.1	Importance of the Culmination Point	71
3.10.2	Interference Patterns of Simultaneously Developing Fold Complexes	72
3.11	Development of Polyharmonic Folds	76
3.12	Structures Developing on Fold Surfaces at Late Stages of Fold Development	81
3.13	Superimposed Folding	85
3.13.1	Crossing Orogenic Belts	85
3.13.2	Successive Deformation Phases in One Orogenic Cycle	86
3.13.3	Successive Folding During a Single Progressive Deformation	86
3.13.4	Simultaneous Folding in Several Directions During One Deformation	87
3.14	Interference Patterns	88
3.14.1	Type 0: Redundant Superposition	88
3.14.2	Type 1: Dome-basin Pattern	89
3.14.3	Type 2: Dome-crescent-mushroom Pattern	90
3.14.4	Type 3: Convergent-Divergent Pattern	90
3.15	Creep	96
3.16	Concluding Remarks	96
	References	97
4	Thrust Fault	101
4.1	Reverse and Normal Drags	102
4.2	Classification of Thrust Faults	102
4.2.1	Basal Decollement	107
4.3	Flat and Ramp Model	107
4.4	Problems with the 'Rocky Mountain' Thrust Model	109

4.5	The Kimmeridge Bay Model	111
4.6	Imbricate Thrusts	112
4.7	Development of Duplex Structure	114
4.8	Development of Decollement Upwarp Structure	116
4.8.1	Model 1	116
4.8.2	Model 2	117
4.9	Thrust Locking	120
4.10	Frontal and Oblique Fault Ramps	120
4.10.1	Formation of Oblique Fault Ramps	121
4.11	Models of Thrusting	123
4.12	Formation of Thrust Ramps	128
4.13	Development of Klippe	128
4.14	Restoration (Balancing) of Deformed Cross-Sections	136
4.15	Estimation to the Depth of Detachment	138
4.16	Step-by-Step Construction of Balanced Cross-Section	139
	References	141
5	Normal Fault	143
5.1	Fault Propagation and Termination	143
5.2	Bookshelf Gliding	147
5.3	Fault Dip, Displacement and Extension	148
5.4	Curvature of Faults and Associated Dilation Spaces	150
5.5	Decollement and Detachment Faults	156
5.6	Co-existence of Normal and Reverse Faults	156
5.7	Evolutionary Stages of Normal Faults	158
5.8	Models of Lithospheric Extension	163
5.9	Factors Responsible for Uplift in a Region	164
5.10	Identification of a Rift Phase by Geochemical Method	166
5.10.1	Ocean Floor Basalts	167
5.10.2	Volcanic Arc Basalts	168
5.10.3	Ocean Island Basalts	168
5.10.4	Continental Basalts	169
	References	169
6	Strike-Slip Fault	173
6.1	Rheological Control on the Development of Faults	173
6.2	Development of Strike-Slip Faults	174
6.3	Development of Two Sets of Faults Under Pure Shear	176
6.4	Differential Displacement Along Faults and Fault Terminations	177
6.5	Transpression and Transtension	178
6.6	Relationships Between Folds and Strike-Slip Faults	180
6.7	Oblique Fault Ramp	182
	References	182

7	Simultaneous Development of Folds and Faults	185
7.1	Simultaneous Development of Folds and Thrusts	186
7.1.1	Fold Initiation with Reactivation of Early Normal Fault as Thrust	186
7.1.2	Variation of Fold Geometry with Increasing Distance from a Thrust	194
7.2	Thrust Initiation Later than Folding	195
7.3	Simultaneous Development of Folds and Strike-Slip Faults	198
7.4	Determination of Fault Displacement by Using a Fold Hinge Line	203
7.5	Simultaneous Development of Folds and Normal Faults	205
7.5.1	Normal Faults in Vicinity of a Thrust	205
7.5.2	Normal Faults During a Rift Phase	205
7.6	Simultaneous Development of Folds and Oblique Ramps	206
7.7	Interference Between Simultaneously Developing Folds, Frontal and Oblique Fault Ramps	209
7.8	Fault Reactivation During Superposed Deformation	210
	References	212
8	Global Positioning System	215
8.1	Possible Sources of Error	216
8.2	Experiments with Physical Models	217
8.3	Experiment	217
8.4	Deformation of a Body Under Pure-Shear	221
8.5	Development of Geological Structures During Internal Deformation and Translation	223
8.6	Field Observations Versus GPS Data	225
8.7	Indian Plate Movement and GPS Data	226
8.8	Importance of Location of GPS Stations in an Orogenic Belt	227
	References	229

Part II Evolution of the Himalaya

9	The Himalaya	233
9.1	Tectonic Subdivisions of the Himalaya	235
	References	237
10	The Foreland Basin	239
10.1	Stratigraphic Succession	240
10.2	Structural Features	246
10.3	Results of Cross-Section Balancing	249
10.3.1	Transect One	249
10.3.2	Transect Two	250
10.3.3	Transect Three	251

10.3.4	Transect Four	252
10.3.5	Transect Five	252
10.4	Possible Sources of Error.	254
10.5	Development of a Foreland Basin	254
10.6	Corrections to be Applied.	256
10.6.1	Case 1.	256
10.6.2	Case 2.	257
10.7	The Estimated Crustal Shortening with Reference to Distance from the Central Crystalline Thrust	259
10.8	Smooth Trajectory Thrust Versus Flat and Ramp Structure.	260
10.9	Future Directions of Research	262
	References.	263
11	The Lower (Lesser) Himalaya	267
11.1	Pre-Himalayan Curvature of the MBT.	268
11.2	Lithotectonic Set-Up	269
11.3	Inverted Metamorphism	274
11.4	Structure	275
11.5	Structural Evolution of the Mandi-Karsog Pluton	280
11.6	Structural Evolution of the Kangra Region	280
11.6.1	The Model	282
11.7	Geometrical Relationships Between Shortening, Displacement Along Thrust and Displacement Out of Tectonic Transport Plane.	285
11.8	Structural Evolution of the Simla Klippe.	288
11.9	Structural Evolution of the Uttarkashi Area.	292
11.9.1	The Model	293
11.10	Structural Evolution of the Mussoorie Syncline	296
11.10.1	The Model	301
11.11	Structural Evolution of the Garhwal Syncline	306
11.11.1	The Model	309
	References.	311
12	The High Himalaya	315
12.1	Age of the MCT.	316
12.2	The Central Crystalline Rocks	317
12.3	Metamorphism	319
12.4	A Model to Explain the Younger Vaikrita Rocks on the Thrust Hanging Wall	320
12.5	Structural Features Along the Satluj Valley	323
12.6	Tectonic Evolution of the WGC.	329
12.7	Reverse (Inverse) Metamorphism	331
12.8	Structural Evolution of the High Himalaya	333
12.9	Tectonic Exhumation of the High Himalaya	338
	References.	339

13 The Tethys Himalaya	345
13.1 The South Tibetan Detachment System	346
13.2 Leucogranites	347
13.3 Lithostratigraphy	347
13.4 Structural Features	348
References	350
14 The Ladakh Himalaya	353
14.1 Tectonostratigraphy	354
14.1.1 Zaskar Zone	354
14.1.2 Tso Morari Crystalline Complex	357
14.1.3 Indus Tsangpo Suture Zone	358
14.1.4 Ladakh Plutonic Complex	359
14.1.5 Shyok Suture Zone	360
14.1.6 Karakoram Zone	361
14.2 Tectonics of the Region	362
14.3 Karakoram Fault	363
14.4 Zaskar Shear Zone	368
14.5 Simultaneous Development of Normal and Strike-Slip Faults	369
References	369
15 The Model	373
15.1 Pre-Himalayan Rift Tectonics	374
15.2 Distribution of Basic Lava	375
15.3 Acid Magmatism	377
15.4 Significant Structural Features of the Himalaya	378
15.5 A Model for Structural Evolution of the Himalaya	382
15.6 Tectonics and Climate	385
References	387
