

Contents

Part I Introduction

1	Modeling Dynamic Biological Systems	3
1.1	Process and Art of Model Building	3
1.2	Static, Comparative Static, and Dynamic Models	6
1.3	Analogies, Anomalies, and Reality	8
1.4	Model Components	10
1.5	Modeling in STELLA	11
1.6	Principles of Modeling	22
1.7	Why Model?	23
1.8	Model Confirmation	24
1.9	Extending the Modeling Approach	26
	References	28
2	Exploring Dynamic Biological Systems	29
2.1	Simple Population Dynamics	29
2.2	Simple Population Model Equations	31
2.3	Simple Population Dynamics with Varying Carrying Capacity	31
2.4	Population with Varying Carrying Capacity Model Equations	33
2.5	Sensitivity and Error Analysis with STELLA	33
2.6	Difference and Differential Equations	37
2.7	Difference and Differential Equation Model Equations	39
	References	40
3	Risky Population	41
3.1	Risky Population Model	41
3.2	Risky Population Model Equations	46

4	Steady State, Oscillation, and Chaos in Population Dynamics	47
4.1	The Emergence of Chaos in Population Models	47
4.2	Chaotic Population Model Equations	52
4.3	Simple Oscillator	52
4.4	Simple Oscillator Model Equations	56
	References	57
5	Spatial Dynamics	59
5.1	Spatial Dynamics Model	59
5.2	Spatial Dynamics Model Equations	61
 Part II Physical and Biochemical Models		
6	Law of Mass Action	65
6.1	Law of Mass Action Model	65
6.2	Law of Mass Action Model Equations	67
7	Catalyzed Product	69
7.1	Catalyzed Product Model	69
7.2	Catalyzed Product Model Equations	72
	Reference	73
8	Two-Stage Nutrient Uptake	75
8.1	Two-Stage Nutrient Uptake Model	75
8.2	Two-Stage Nutrient Uptake Model Equations	78
	References	79
9	Iodine Compartment	81
9.1	Iodine Compartment Model	81
9.2	Iodine Compartment Model Equations	83
10	The Brusselator	85
10.1	Brusselator Model Equations	85
10.2	Brusselator Model Equations	89
	Reference	89
11	Signal Transmission	91
11.1	Fitzhugh–Nagumo Neuron Model	91
11.2	Fitzhugh–Nagumo Neuron Model Equations	95
	Reference	95
 Part III Genetics Models		
12	Mating and Mutation of Alleles	99
12.1	Model of Mating and Mutation of Alleles	99
12.2	Mating and Mutation of Alleles Model Equations	102

13 Artificial Worms	105
13.1 Artificial Worm Model	105
13.2 Artificial Worm Model Equations	113
Reference	118
14 Langur Infanticide and Long-Term Matriline Fitness	119
14.1 Langur Infanticide Model	119
14.2 Langur Infanticide Model Equations	127
References	129

Part IV Models of Organisms

15 Odor Sensing	133
15.1 Basic Model of Odor Sensing	133
15.2 Odor Sensing Model Equations	135
16 Stochastic Resonance	137
16.1 Basic Stochastic Resonance Model	137
16.2 Stochastic Resonance Model Equations	139
17 Heart Beat	141
17.1 Basic Heart Beat Model	141
17.2 Heart Beat Model Equations	146
18 Bat Thermo-Regulation	147
18.1 Bat Thermo-Regulation Model	147
18.2 Bat Thermoregulation Model Equations	150
Reference	150
19 The Optimum Plant	151
19.1 Optimum Plant Model	151
19.2 Optimal Plant Model Equations	154
References	155
20 Soybean Plant Growth	157
20.1 Soybean Plant Model	157
20.2 Soybean Plant Growth Model Equations	164
Reference	165
21 Infectious Diseases	167
21.1 Basic Epidemic Model	167
21.2 Basic Epidemic Model Equations	169
21.3 Two Infective Populations	169
21.4 Two Infective Populations Model Equations	172
21.5 Temporary Immunity	173
21.6 Temporary Immunity Model Equations	175
21.7 Epidemic with Vaccination	175
21.8 Epidemic with Vaccine Model Equations	179
References	180

Part V Single Population Models

22	Adaptive Population Control	183
22.1	Adaptive Population Control Model	183
22.2	Adaptive Population Control Model Equations	189
23	Roan Herds	191
23.1	Roan Herd Model	191
23.2	Roan Herd Model Equations	194
	Reference	195
24	Population Dynamics of Voles	197
24.1	Basic Model	197
24.2	Basic Vole Model Equations	200
24.3	Vole Population Dynamics with Seasonality	201
24.4	Vole Model with Seasonality Equations	203
24.5	Sinusoidal Seasonal Change	203
24.6	Sinusoidal Vole Model Equations	204
	References	205
25	Lemming Population Dynamics	207
25.1	Lemming Model	207
25.2	Lemming Model Equations	209
	References	209
26	Multi-Stage Insect Models	211
26.1	Matching Experiments and Models of Insect Life Cycles	211
26.2	Two-Stage Insect Model Equations	214
26.3	Two-Stage Insect Model with a Degree-Day Calculation Controlling the Maturation Rate	215
26.4	Two-Stage Insect Model with Degree-Day Equations	219
26.5	Three-Stage Insect Model	219
26.6	Three-Stage Insect Model Equations	221
27	Two Age-Class Parasites	223
27.1	Two Age-Class Parasite Model	223
27.2	Two Age-Class Parasite Model Equations	226
28	Monkey Travels	229
28.1	Model of Monkey Travels	229
28.2	Monkey Travels Model Equations	236
	Reference	239
29	Biosynchronicity	241
29.1	Firefly Model	241
29.2	Biosynchronicity Model Equations	244
	Reference	245

Part VI Multiple Population Models

30	Plant–Microbe Interaction	249
30.1	Plant–Microbe Interaction Model	249
30.2	Plant–Microbe Interaction Model Equations	256
	References	256
31	Wilbebeest	259
31.1	Wilbebeest Model	259
31.2	Wilbebeest Model Equations	264
	Reference	266
32	Nicholson–Bailey Host–Parasite Interaction	267
32.1	Nicholson–Bailey Host–Parasitoid Model	267
32.2	Nicholson–Bailey Host–Parasitoid Model Equations	271
	References	272
33	Diseased and Healthy Immigrating Insects	273
33.1	Immigrating Insects Model	273
33.2	Immigrating Insects Model Equations	277
34	Two-Species Colonization Model	283
34.1	Basic Colonization Model	283
34.2	Basic Patch Dynamics Model Equations	288
34.3	Two-Species Colonization Model with Fire	288
34.4	Patch Dynamics With Fire Model Equations	290
34.5	Landscape and Patch Dynamics	291
34.6	Landscape and Patch Dynamics Model Equations	296
	References	303
35	Herbivore–Algae Predator–Prey Dynamics	305
35.1	Herbivore–Algae Predator–Prey Model	305
35.2	Herbivore–Algae Predator–Prey Model Equations	309
36	The Grass Carp	311
36.1	Grass Carp Model	311
36.2	Grass Carp Model Equations	321
	Reference	325
37	Recruitment and Trophic Dynamics of Gizzard Shad	327
37.1	Gizzard Shad Model	327
37.2	Gizzard Shad Model Equations	343
38	Salamander Dispersal	349
38.1	Salamander Dispersal Model	349
38.2	Salamander Dispersal Model Equations	353
	References	356

39	Quail Movement	357
39.1	Quail Model	357
39.2	Quail Model Equations	363
	References	366
40	Modeling Spatial Dynamics of Predator–Prey Interactions in a Changing Environment	367
40.1	Spatial Predator–Prey Model	367
40.2	Spatial Predator–Prey Model Equations	371
 Part VII Catastrophe and Self-Organization		
41	Catastrophe	377
41.1	Catastrophe Model	377
41.2	Catastrophe Model Equations	380
	Reference	380
42	Spruce Budworm Dynamics	381
42.1	Spruce Budworm Model	381
42.2	Spruce Budworm Model Equations	388
	Reference	389
43	Game of Life	391
43.1	Game of Life Model	391
43.2	Game of Life Model Equations	395
	References	410
44	Daisyworld	411
44.1	Daisyworld Model	411
44.2	Daisyworld Model Equations	422
	References	423
 Part VIII Conclusion		
45	Building a Modeling Community	427
	Index	429
