

# Contents

<b>1 Preliminaries on Transition Probabilities</b>	1
1.1 Basic Definitions and Results	2
1.2 Invariant Probabilities	20
1.3 The Ergodic Decomposition of Kryloff, Bogoliouboff, Beboutoff and Yosida	25
1.4 Feller Transition Probabilities	36
1.4.1 Supports of Elementary and Ergodic Invariant Measures, Minimality, Unique Ergodicity, and Generic Points	36
1.4.2 Equicontinuity	45
<b>2 Preliminaries on Transition Functions and Their Invariant Probabilities</b>	57
2.1 Transition Functions	57
2.2 Examples	68
2.2.1 Transition Functions Defined by One-Parameter Semigroups or Groups of Measurable Functions: General Considerations	69
2.2.2 Transition Functions Defined by Specific One-Parameter Semigroups or Groups of Measurable Functions	72
2.2.3 Transition Functions Defined by One-Parameter Convolution Semigroups of Probability Measures	83
2.3 Invariant Probability Measures	89
<b>3 Preliminaries on Vector Integrals and Almost Everywhere Convergence</b>	97
3.1 The Bochner and the Dunford-Schwartz Integrals	97
3.1.1 The Bochner Integral	98
3.1.2 Complete Measure Spaces	102
3.1.3 The Dunford-Schwartz Integral	105

3.2	Almost Everywhere Convergence and the Dunford-Schwartz Theorem .....	110
3.2.1	Pointwise and Almost Everywhere Convergence .....	110
3.2.2	Semigroups of Operators Defined by Invariant Probabilities, and a Theorem of Dunford and Schwartz .....	120
3.3	The Pointwise Integral .....	129
3.3.1	Definitions and Basic Properties .....	129
3.3.2	An Application: The Existence of Invariant Probabilities for Transition Functions .....	138
<b>4</b>	<b>Special Topics</b> .....	145
4.1	Functions Constant Almost Everywhere .....	145
4.2	Conditional Expectation .....	147
4.3	Weak* Convergence and Continuous-Time Limit Supports .....	148
4.4	Continuous-Time Banach Limits .....	157
4.5	The Ascoli-Arzelà Theorem .....	167
4.6	Ordered Vector Spaces and Positive Operators .....	170
<b>5</b>	<b>The Ergodic Decomposition of Kryloff, Bogoliouboff, Beboutoff and Yosida, Part I</b> .....	175
5.1	Elementary Measures and Their Role in the Decomposition .....	176
5.2	The Measurability of $\mathcal{D}$ , $\Gamma_0$ , $\Gamma_c$ , $\Gamma_{cp}$ and $\Gamma_{cpi}$ .....	183
5.3	Sets of Maximal Probability .....	192
<b>6</b>	<b>The Ergodic Decomposition of Kryloff, Bogoliouboff, Beboutoff and Yosida, Part II: The Role of the Invariant Ergodic Probability Measures in the Decomposition</b> .....	199
6.1	Preliminaries on Ergodic Measures .....	199
6.2	The Invariant Ergodic Probability Measures as Standard Elementary Measures .....	218
6.3	More About the Set of All Invariant Ergodic Probabilities .....	228
<b>7</b>	<b>Feller Transition Functions</b> .....	249
7.1	Elementary Measures and Their Supports .....	250
7.2	Unique Ergodicity and Related Topics .....	267
7.2.1	Supports of Invariant Probabilities of Uniquely Ergodic Transition Functions and a Related Topic .....	267
7.2.2	A Criterion for Unique Ergodicity .....	272
7.2.3	Generic Points .....	280
7.3	Mean Ergodic Theorems .....	289
	<b>Appendices</b> .....	309
<b>A</b>	<b>Semiflows and Flows: The Algebraic and Topological Setting, and First Examples</b> .....	309
A.1	Semigroups, Groups and Coset Spaces .....	309
A.2	Topologies on Semigroups, Groups and Coset Spaces .....	315
A.3	Actions, Semiflows and Flows .....	325

**B Invariant Measures, One-Parameter Convolution Semigroups, and Additional Examples of Semiflows and Flows** ..... 335

    B.1 Invariant Measures ..... 335

    B.2 Banach Algebras, Convolutions of Measures, and the Exponential Function ..... 349

    B.3 One-Parameter Convolution Semigroups of Probability Measures ..... 361

    B.4 Exponential Semiflows and Flows ..... 363

        B.4.1 Stochastic Matrices and Semiflows ..... 364

        B.4.2 Exponential Flows on Spaces of Cosets of  $SL(n, \mathbb{R})$  ..... 370

**Bibliography** ..... 375

**Index** ..... 381

Invariant Probabilities of Transition Functions

Zaharopol, R.

2014, XVIII, 389 p., Hardcover

ISBN: 978-3-319-05722-4
