Contents

1 Recursion, Induction 1
1.1 Numerals, Types, Tokens 1
1.2 Immediate Succession. 4
1.3 How Many Types?. 7
1.4 Recursive Definition. 9
1.5 Proof by Induction 11
1.6 A Characteristic Function 14
1.7 Some Logic. 16
1.8 Π^0_1 Sentences. 20
1.9 Some Philosophy 24
1.10 Solutions of Odd-Numbered Exercises 29
References 33

2 Peano Arithmetic, Incompleteness 35
2.1 The language of PA. 35
2.2 The Axioms of PA. 37
2.3 Incompleteness 1: Compactness. 39
2.4 Incompleteness 2: Representability. 43
2.5 Why Fret About Consistency?. 50
2.6 Solutions of Odd-Numbered Exercises 51
References 52

3 Hereditarily Finite Lists. 55
3.1 What Sets Are Not. 55
3.2 List-Types. 57
3.3 Precursors 60
3.4 Logically Possible Lists 62
3.5 Numbers Can Be Lists 64
3.6 Lists Can Be Numbers 67
3.7 Super-Numbers 70
3.8 Hereditary Finiteness 72
3.9 Finite Ranks 74

3.10 And Why Are We Doing This? . . . 78
3.11 Solutions of Odd-Numbered Exercises . . . 79
References . . . 82

4 Zermelian Lists . . . 85
4.1 Infinite Lists . . . 85
4.2 More Ranks. . . . 88
4.3 Real Numbers . . . 91
4.4 From Lists to Sets . . . 97
4.5 Solutions of Odd-Numbered Exercises . . . 97
References . . . 100

5 The Hierarchy of Sets . . . 101
5.1 New Axioms . . . 101
5.2 Two Models . . . 106
5.3 How Many Ranks?. . . . 107
5.4 Equiconsistency . . . 109
5.5 Even More Ranks . . . 111
5.6 $V(\omega + \omega)$ and Beyond . . . 115
5.7 Solutions of Odd-Numbered Exercises . . . 118
References . . . 121

6 Frege Arithmetic . . . 123
6.1 The Language of FA . . . 123
6.2 The Axioms of FA. . . . 126
6.3 Some Number Theory . . . 127
6.4 FA Interprets PA . . . 135
6.5 Extensions: An Epic Failure . . . 141
6.6 The Perils of Abstraction . . . 143
6.7 Monadic Frege Arithmetic . . . 144
6.8 Solutions of Odd-Numbered Exercises . . . 153
References . . . 159

7 Intuitionist Logic . . . 161
7.1 Inference. . . . 161
7.2 Conjunctions . . . 163
7.3 Conditionals . . . 166
7.4 Negations . . . 169
7.5 Absurd Absurdities. . . . 172
7.6 Disjunctions . . . 175
7.7 Assimilators . . . 178
7.8 The Glivenko/Gödel Theorems . . . 181
7.9 First-Order Logic With a Decidable Relation . . . 184

7.10 Curry's Paradox 187
7.11 Solutions of Odd-Numbered Exercises 188
References 196
