

# Contents

<b>1</b>	<b>Introduction and Motivation</b>	1
1.1	Why a Quantum Theory of Gravity Cannot be Dispensed With.	1
1.2	Quantum Gravity and Quantization	5
1.3	On Scales and Renormalization With or Without Background	8
1.4	Purpose and Plan of the Thesis	10
	References	12
<b>2</b>	<b>Two Paths to Group Field Theories</b>	17
2.1	Group Field Theories and Quantum General Relativity	17
2.1.1	Loop Quantum Gravity	17
2.1.2	Spin Foams	22
2.1.3	Summing Over Spin Foams	27
2.1.4	Towards Well-Defined Quantum Field Theories of Spin Networks	29
2.2	Group Field Theories and Random Discrete Geometries.	34
2.2.1	Matrix Models and Random Surfaces	34
2.2.2	Higher Dimensional Generalizations	39
2.2.3	Bringing Discrete Geometry In.	41
2.3	A Research Direction.	43
	References	45
<b>3</b>	<b>Colors and Tensor Invariance</b>	49
3.1	Colored Group Field Theories.	50
3.1.1	Combinatorial and Topological Motivations.	50
3.1.2	Motivation from Discrete Diffeomorphisms	52
3.2	Colored Tensor Models	53
3.2.1	Models and Amplitudes.	53
3.2.2	Degree and Existence of the Large N Expansion	55
3.2.3	The World of Melons	55

3.3	Tensor Invariance . . . . .	57
3.3.1	From Colored Simplices to Tensor Invariant Interactions . . . . .	57
3.3.2	Generalization to GFTs . . . . .	58
	References . . . . .	59
<b>4</b>	<b>Large N Expansion in Topological Group Field Theories . . . . .</b>	<b>61</b>
4.1	Colored Boulatov Model . . . . .	61
4.1.1	Vertex Variables . . . . .	61
4.1.2	Regularization and General Scaling Bounds . . . . .	74
4.1.3	Topological Singularities . . . . .	78
4.1.4	Domination of Melons . . . . .	82
4.2	Colored Ooguri Model . . . . .	88
4.2.1	Edge Variables . . . . .	88
4.2.2	Regularization and General Scaling Bounds . . . . .	96
4.2.3	Topological Singularities . . . . .	102
4.2.4	Domination of Melons . . . . .	105
	References . . . . .	109
<b>5</b>	<b>Renormalization of Tensorial Group Field Theories:</b>	
	<b>Generalities . . . . .</b>	<b>111</b>
5.1	Preliminaries: Renormalization of Local Field Theories . . . . .	111
5.1.1	Locality, Scales and Divergences . . . . .	111
5.1.2	Perturbative Renormalization Through a Multiscale Decomposition . . . . .	113
5.2	Locality and Propagation in GFT . . . . .	117
5.2.1	Simplicial and Tensorial Interactions . . . . .	118
5.2.2	Constraints and Propagation . . . . .	119
5.3	A Class of Models with Closure Constraint . . . . .	121
5.3.1	Definition . . . . .	121
5.3.2	Graph-Theoretic and Combinatorial Tools . . . . .	124
5.4	Multiscale Expansion and Power-Counting . . . . .	131
5.4.1	Multiscale Decomposition . . . . .	131
5.4.2	Propagator Bounds . . . . .	132
5.4.3	Abelian Power-Counting . . . . .	134
5.5	Classification of Just-Renormalizable Models . . . . .	137
5.5.1	Analysis of the Abelian Divergence Degree . . . . .	137
5.5.2	Just-Renormalizable Models . . . . .	142
5.5.3	Properties of Melonic Subgraphs . . . . .	143
	References . . . . .	149
<b>6</b>	<b>Super-Renormalizable <math>U(1)</math> Models in Four Dimensions . . . . .</b>	<b>151</b>
6.1	Divergent Subgraphs and Wick Ordering . . . . .	151
6.1.1	A Bound on the Divergence Degree . . . . .	152

6.1.2	Classification of Divergences . . . . .	153
6.1.3	Localization Operators. . . . .	155
6.1.4	Melordering . . . . .	156
6.1.5	Vacuum Submelonic Counter-Terms . . . . .	159
6.2	Finiteness of the Renormalized Series . . . . .	160
6.2.1	Classification of Forests. . . . .	161
6.2.2	Power-Counting of Renormalized Amplitudes . . . . .	163
6.2.3	Sum Over Scale Attributions . . . . .	165
6.3	Example: Wick-Ordering of a $\varphi^6$ Interaction . . . . .	167
	References . . . . .	169
<b>7</b>	<b>Just-Renormalizable SU(2) Model in Three Dimensions . . . . .</b>	<b>171</b>
7.1	The Model and Its Divergences. . . . .	171
7.1.1	Regularization and Counter-Terms . . . . .	171
7.1.2	List of Divergent Subgraphs. . . . .	174
7.2	Non-Abelian Multiscale Expansion . . . . .	175
7.2.1	Power-Counting Theorem . . . . .	175
7.2.2	Contraction of High Melonic Subgraphs . . . . .	179
7.3	Perturbative Renormalizability . . . . .	186
7.3.1	Effective and Renormalized Expansions . . . . .	188
7.3.2	Classification of Forests. . . . .	194
7.3.3	Convergent Power-Counting for Renormalized Amplitudes. . . . .	197
7.3.4	Sum Over Scale Attributions . . . . .	199
7.4	Renormalization Group Flow . . . . .	201
7.4.1	Approximation Scheme . . . . .	202
7.4.2	Truncated Equations for the Counter-Terms. . . . .	204
7.4.3	Physical Coupling Constants: Towards Asymptotic Freedom . . . . .	210
7.4.4	Mass and Consistency of the Assumptions. . . . .	211
	References . . . . .	212
<b>8</b>	<b>Conclusions and Perspectives . . . . .</b>	<b>213</b>
8.1	The $1/N$ Expansion in Colored GFTs . . . . .	213
8.1.1	Achievements. . . . .	213
8.1.2	Discussion and Outlook. . . . .	215
8.2	Renormalization of TGFTs. . . . .	216
8.2.1	Achievements. . . . .	216
8.2.2	Discussion and Outlook. . . . .	218
	References . . . . .	219
	<b>Appendix A: Technical Appendix. . . . .</b>	<b>221</b>

Tensorial Methods and Renormalization in Group Field  
Theories

Carrozza, S.

2014, XV, 226 p. 51 illus., Hardcover

ISBN: 978-3-319-05866-5
