1	Constitutive Models in Finite Element Codes.....	1
	W. Fellin and A. Ostermann	
1.1	Introduction	1
1.2	The Merits and Pitfalls of One-Dimensional Considerations.....	3
1.3	Time Integration of Pure Rate Equations	5
1.3.1	Pure Rate Equation.....	5
1.3.2	Explicit Integration	8
1.3.3	Adaptivity and Error Control	11
1.3.4	Implicit Integration	12
1.3.5	Semi-Implicit Integration	13
1.3.6	Examples	15
1.4	Extensions to Elasto-Plastic Models	16
1.4.1	Nonlinear Elasticity, Nonlinear Isotropic Hardening.....	16
1.4.2	Event Location	19
1.4.3	Time Integration of Index 2 Problems	20
1.4.4	Example	22
1.5	Consistent Tangent Operator	22
1.5.1	Incremental Loading	23
1.5.2	The Equilibrium Iteration.....	24
1.5.3	Newton's Method	24
1.5.4	Consistent Tangent.....	25
1.5.5	The Jacobian	26
1.5.6	Analytical Solution	26
1.5.7	Numerical Time Integration	27
1.5.8	Variational Equation	27
1.5.9	Analytic Solution of Stress Update and Jacobian	28
1.5.10	Numerical Approximation of the Jacobian	28
1.5.11	Example	29
1.6	Fully Three-Dimensional Formulation	32
1.6.1	Consistent Tangent Operator, Jacobian	32
1.6.2	Adaptive Time Integration	34

1.6.3	Application to Hypoplasticity	34
1.6.4	Application to Elasto-Plasticity	35
1.7	Conclusion	37
	Appendix: Hypoplastic Model	38
A.1	Basic Model	39
A.2	Extended Hypoplastic Model	40
A.3	Material Parameters	41
	References	41
2	Barodesy: The Next Generation of Hypoplastic Constitutive Models for Soils	43
	D. Kolymbas	
2.1	Introduction	43
2.2	Empirical Basis of Barodesy	44
2.3	Early Quests for Alternatives to Plasticity Theory	44
2.4	Barodesy and Hypoplasticity	45
2.4.1	About the Name “Barodesy”	46
2.5	Symbols and Notation	47
2.6	Proportional Paths A	48
2.7	Proportional Paths B	50
2.8	Limit States	50
2.9	Incremental Non-Linearity	51
2.10	Consolidations and Critical States	51
2.11	Cyclic Loading, Limit Cycles and Shake-Down	53
2.12	Significance of Barodesy	55
2.13	Open Questions	55
	References	56
3	Seismic Performance of Tuned Mass Dampers with Uncertain Parameters	57
	C. Adam, M. Oberguggenberger, and B. Schmelzer	
3.1	Introduction	58
3.2	Mechanical Model	59
3.3	Modeling of the Earthquake Excitation	61
3.4	Modeling of the Parameter Uncertainty	64
3.4.1	Two Examples of Random Sets for Uncertainty Modeling	65
3.5	Combination of Stochastic Excitation and Parameter Uncertainty	66
3.6	Numerical Simulation and Results	68
3.6.1	Parametric Studies	69
3.6.2	Set-Valued TMD Parameters	73
3.6.3	Set-Valued Soil Parameters	78
3.7	Conclusion	81
	References	82

4 Sensitivity and Reliability Analysis of Engineering Structures: Sampling Based Methods	85
M. Oberguggenberger	
4.1 Introduction	85
4.2 Design of Experiment	87
4.3 Random Fields	92
4.4 Sensitivity Analysis	94
4.5 Reliability Analysis	97
4.6 Application	103
4.7 Conclusion	110
References	110
5 Multi-Phase Models in Civil Engineering	113
P. Gannitzer, M. Aschaber, and G. Hofstetter	
5.1 Introduction	113
5.2 Primary Unknowns and Thermodynamic State Variables	114
5.3 Governing Equations	116
5.3.1 Balance Laws	117
5.3.2 Flux Approximations and Stress State Variables	119
5.4 Application to Geotechnical Engineering	121
5.4.1 A Modified Cap Model for Unsaturated and Saturated Soil	123
5.4.2 A Model Problem for Ground Settlements	129
5.4.3 Shear Failure of an Embankment Dam	135
5.5 Multi-Phase Model for Concrete	140
5.5.1 Constitutive Law for Concrete	142
5.5.2 Numerical Simulation of the Behaviour of Concrete Overlays	143
5.6 Summary and Conclusions	147
References	148
6 Concrete Structures Subjected to Fire Loading: From Thermo-Mechanical Modeling of Strain Behavior of Concrete Towards Structural Safety Assessment	151
T. Ring, M. Zeiml, and R. Lackner	
6.1 Introduction	152
6.2 Experimental Observation	154
6.2.1 Deformation Under Thermo-Mechanical Loading	154
6.2.2 Behavior of Siliceous Material	155
6.3 Micromechanical Model	156
6.3.1 Effective Elastic Properties	157
6.3.2 Effective (Free) Thermal Strain	159
6.4 Implementation	160
6.5 Finite-Element Implementation and Numerical Results	166
6.6 Concluding Remarks	169
Appendix	170
References	170
