Part I Basic Functional Analysis

1	Topological Vector Spaces	3
1.1	Introduction	3
1.2	Vector Spaces	3
1.3	Some Properties of Topological Vector Spaces	7
1.4	Compactness in Topological Vector Spaces	9
1.5	Normed and Metric Spaces	11
1.6	Compactness in Metric Spaces	13
1.7	The Arzela–Ascoli Theorem	19
1.8	Linear Mappings	21
1.9	Linearity and Continuity	22
1.10	Continuity of Operators on Banach Spaces	23
1.11	Some Classical Results on Banach Spaces	24
1.12	Hilbert Spaces	31
1.13	Orthonormal Basis	36
1.13.1	The Gram–Schmidt Orthonormalization	39
2	The Hahn–Banach Theorems and Weak Topologies	41
2.1	Introduction	41
2.2	The Hahn–Banach Theorem	41
2.3	Weak Topologies	46
2.4	The Weak-Star Topology	48
2.5	Weak-Star Compactness	48
2.6	Separable Sets	52
2.7	Uniformly Convex Spaces	55
3	Topics on Linear Operators	57
3.1	Topologies for Bounded Operators	57
3.2	Adjoint Operators	58
3.3	Compact Operators	64

3.4	The Square Root of a Positive Operator	66
3.5	About the Spectrum of a Linear Operator	73
3.6	The Spectral Theorem for Bounded Self-Adjoint Operators	77
3.6.1	The Spectral Theorem	82
3.7	The Spectral Decomposition of Unitary Transformations	86
3.8	Unbounded Operators	88
3.8.1	Introduction	88
3.9	Symmetric and Self-Adjoint Operators	91
3.9.1	The Spectral Theorem Using Cayley Transform	94
4	Basic Results on Measure and Integration	99
4.1	Basic Concepts	99
4.2	Simple Functions	101
4.3	Measures	101
4.4	Integration of Simple Functions	102
4.5	Signed Measures	106
4.6	The Radon–Nikodym Theorem	109
4.7	Outer Measure and Measurability	114
4.8	The Fubini Theorem	122
4.8.1	Product Measures	123
5	The Lebesgue Measure in \mathbb{R}^n	129
5.1	Introduction	129
5.2	Properties of the Outer Measure	130
5.3	The Lebesgue Measure	133
5.4	Properties of Measurable Sets	133
5.5	Lebesgue Measurable Functions	138
6	Other Topics in Measure and Integration	147
6.1	Some Preliminary Results	147
6.2	The Riesz Representation Theorem	153
6.3	The Lebesgue Points	162
6.3.1	Lebesgue Points	164
7	Distributions	167
7.1	Basic Definitions and Results	167
7.2	Differentiation of Distributions	171
7.3	Examples of Distributions	172
7.3.1	First Example	172
7.3.2	Second Example	172
7.3.3	Third Example	172

8	The Lebesgue and Sobolev Spaces	175
8.1	Definition and Properties of L^p Spaces	175
8.1.1	Spaces of Continuous Functions	180
8.2	The Sobolev Spaces	183
8.3	The Sobolev Imbedding Theorem	186
8.3.1	The Statement of the Sobolev Imbedding Theorem	186
8.4	The Proof of the Sobolev Imbedding Theorem	187
8.4.1	Relatively Compact Sets in $L^p(\Omega)$	191
8.4.2	Some Approximation Results	195
8.4.3	Extensions	199
8.4.4	The Main Results	203
8.5	The Trace Theorem	214
8.6	Compact Imbeddings	216

Part II Variational Convex Analysis

9	Basic Concepts on the Calculus of Variations	225
9.1	Introduction to the Calculus of Variations	225
9.2	Evaluating the Gâteaux Variations	227
9.3	The Gâteaux Variation: A More General Case	229
9.4	Fréchet Differentiability	231
9.5	Elementary Convexity	231
9.6	The Legendre–Hadamard Condition	234
9.7	The Weierstrass Condition for $n = 1$	236
9.8	The Weierstrass Condition: The General Case	239
9.9	The du Bois–Reymond Lemma	243
9.10	The Weierstrass–Erdmann Conditions	245
9.11	Natural Boundary Conditions	248
10	Basic Concepts on Convex Analysis	251
10.1	Convex Sets and Convex Functions	251
10.1.1	Lower Semicontinuity	251
10.2	Duality in Convex Optimization	261
10.3	The Min–Max Theorem	264
10.4	Relaxation for the Scalar Case	271
10.5	Duality Suitable for the Vectorial Case	280
10.5.1	The Ekeland Variational Principle	280
11	Constrained Variational Optimization	287
11.1	Basic Concepts	287
11.2	Duality	291
11.3	The Lagrange Multiplier Theorem	292
11.4	Some Examples Concerning Inequality Constraints	299
11.5	The Lagrange Multiplier Theorem for Equality and Inequality Constraints	300
11.6	Second-Order Necessary Conditions	304

11.7	On the Banach Fixed Point Theorem	307
11.8	Sensitivity Analysis	309
11.8.1	Introduction	309
11.8.2	The Main Results About Gâteaux Differentiability	311

Part III Applications

12	Duality Applied to Elasticity	321
12.1	Introduction	321
12.2	The Main Duality Principle	322
12.3	Other Duality Principles	331
12.4	A Numerical Example	339
12.5	Conclusion	341
13	Duality Applied to a Plate Model	343
13.1	Introduction	343
13.2	The Main Duality Principle	345
13.3	Another Duality Principle	349
13.4	An Algorithm for Obtaining Numerical Results	353
13.5	Numerical Results	360
13.6	Conclusion	362
14	About Ginzburg–Landau-Type Equations: The Simpler Real Case	363
14.1	Introduction	363
14.1.1	Existence of Solution for the Ginzburg–Landau Equation	364
14.2	A Concave Dual Variational Formulation	365
14.3	A Numerical Example	369
15	The Full Complex Ginzburg–Landau System	373
15.1	Introduction	373
15.2	Global Existence for the Ginzburg–Landau System	374
15.3	A Related Optimal Control Problem	377
15.4	The Generalized Method of Lines	382
15.4.1	About the Approximation Error	386
15.4.2	The Solution of Laplace Equation for a Special Class of Domains	387
15.5	A First Numerical Example	389
15.6	A Numerical Example Concerning the Optimal Control Problem	390
15.7	Conclusion	392
16	More on Duality and Computation for the Ginzburg–Landau System	393
16.1	Introduction	393
16.2	The Duality Principle	394

16.3	On the Numerical Procedures for Ginzburg–Landau-Type Equations	400
16.4	Numerical Results for Related PDEs	403
16.4.1	A Related PDE on a Special Class of Domains	403
16.4.2	About the Matrix Version of GMOL	404
16.5	Numerical Results	411
16.6	A New Procedure to Obtain Approximate PDE Solutions	412
16.7	Final Results, Newton’s Method for a First-Order System	416
16.7.1	An Example in Nuclear Physics	418
16.8	Conclusion	423
17	On Duality Principles for Scalar and Vectorial Multi-well Variational Problems	425
17.1	Introduction	425
17.2	Preliminaries	427
17.3	The Main Duality Principle	429
17.4	The Scalar Multi-well Problem	433
17.4.1	The Primal Variational Formulation	433
17.4.2	A Scalar Multi-well Formulation	435
17.5	Duality for a Vectorial Multi-well Model Applicable to Phase Transition Problems	437
17.6	Conclusion	446
18	More on Duality Principles for Multi-well Problems	447
18.1	Introduction	447
18.2	The Main Duality Principle	447
18.3	Another Duality Principle for Phase Transition Models	450
18.4	Duality for a Problem on Conductivity in Composites	451
18.5	Optimal Design and Control for a Plate Model	456
18.5.1	The Duality Principle for the Plate Model	456
18.6	A Numerical Example	460
18.7	Conclusion	462
19	Duality and Computation for Quantum Mechanics Models	465
	Fabio Botelho and Anderson Ferreira	
19.1	Introduction	465
19.2	The Duality Principle	466
19.3	Numerical Examples	469
19.3.1	The Algorithm	470
19.4	Conclusion	476
20	Duality Applied to the Optimal Design in Elasticity	477
	Fabio Botelho and Alexandre Molter	
20.1	Introduction	477
20.2	On the Duality Principle	478
20.3	A Numerical Example	484

20.4	Another Numerical Example	486
20.5	Conclusion	491
21	Duality Applied to Micro-Magnetism	493
21.1	Introduction	493
21.2	Summary of Results for the Hard Uniaxial Case	494
21.3	The Duality Principle for the Hard Case	496
21.4	The Semi-Linear Case	502
21.5	Numerical Examples	510
21.5.1	First Example	511
21.5.2	Second Example	511
21.6	Acknowledgments	515
21.7	Conclusion	516
22	The Generalized Method of Lines Applied to Fluid Mechanics	517
22.1	Introduction	517
22.2	On the Solution of Steady-State Euler Equation	517
22.3	The Generalized Method of Lines for the Navier–Stokes System	519
22.3.1	The General Case for Specific Boundary Conditions	520
22.3.2	A Numerical Example	529
22.4	Conclusion	530
23	Duality Applied to the Optimal Control and Optimal Design of a Beam Model	537
23.1	Introduction	537
23.2	The Duality Principle	538
23.3	Some Closely Related Simpler Examples with Numerical Results	546
23.3.1	Numerical Results	549
23.3.2	A Dynamical Case	549
23.4	Conclusion	552
	References	553
	Index	557

Functional Analysis and Applied Optimization in Banach
Spaces

Applications to Non-Convex Variational Models

Silva Botelho, F.

2014, XVIII, 560 p. 57 illus., 51 illus. in color., Hardcover
