1	Introduction	1
1.1	Discovery of the Neutrino	2
1.2	Neutrino Oscillations	3
1.3	Role of Massive Neutrinos	10
1.3.1	Particle Physics	10
1.3.2	Cosmology	13
1.4	Measurement of the Neutrino Mass	14
1.4.1	Indirect Methods	15
1.4.2	Direct Methods	19
	References	26
2	The KATRIN Experiment	31
2.1	Tritium β -decay Experiments	31
2.1.1	Tritium β -decay and the Neutrino Mass	31
2.1.2	The MAC-E-Filter Measurement Principle	34
2.1.3	Results of Previous Neutrino Mass Experiments at Mainz and Troitsk	36
2.2	The Karlsruhe Tritium Neutrino Experiment	36
2.2.1	Projected Sensitivity on Neutrino Mass	37
2.2.2	Experimental Overview	38
2.3	Properties of the WGTS	41
2.3.1	Column Density	41
2.3.2	Isotopologue Composition	42
2.4	Accuracy Requirements for the Monitoring of the Source Gas Composition	43
	References	48
3	Theory of Quantitative Raman Spectroscopy	53
3.1	Introduction to Raman Spectroscopy	54
3.1.1	Rotational and Vibrational States in Diatomic Molecules	55
3.1.2	Basic Principles of the Raman Effect	58
3.1.3	Description of Raman Intensities	61

3.2	Raman Spectroscopy on Hydrogen Isotopologues	65
3.2.1	Pre-Requisites of the Experimental Systems	66
3.2.2	Theoretical Values for the Polarizability	67
3.2.3	Previous Raman Studies on All Hydrogen Isotopologues Including Tritium	68
3.3	Calibration for Quantitative Analysis	69
3.3.1	Possible Methods	70
3.3.2	Calibration Strategy for the KATRIN LARA System . . .	71
	References	73
4	Experimental Setup	75
4.1	Raman System Hardware	75
4.1.1	Overview of the Scheme of Raman Measurements	75
4.1.2	Raman Systems at the TLK	76
4.1.3	Components of the Raman Systems	78
4.2	Spectrum Acquisition, Processing and Analysis.	85
4.2.1	Data Acquisition	86
4.2.2	Data Processing	88
4.3	Analysis of Actual System Performance.	95
	References	98
5	Calibration Based on Theoretical Intensities and Spectral Sensitivity (Method I).	101
5.1	Motivation and Overview	101
5.2	Calculation of Theoretical Intensities	102
5.3	Verification of Theoretical Intensities via Depolarization Measurements	106
5.3.1	Definition of the Depolarization Ratio	107
5.3.2	Model of Depolarization Ratios as Observed in the Experiment	108
5.3.3	Routine for Correcting Observed Depolarization Ratios	116
5.3.4	Measurement of Depolarization Ratios of All Six Hydrogen Isotopologues	119
5.4	Measurement of the System's Spectral Sensitivity	132
5.4.1	Requirements for the Determination of the Spectral Sensitivity	132
5.4.2	Possible Calibration Sources for the Measurement of the Spectral Sensitivity	133
5.4.3	NIST-traceable Luminescence Standard SRM 2242. . . .	135
5.4.4	Resulting Spectral Sensitivity and Discussion.	143
5.5	Discussion of the Calibration Results.	144
5.6	Conclusions	146
	References	147

6 Calibration Based on Accurate Gas Samples (Method II)	151
6.1 Motivation and Overview	151
6.1.1 Content of Chapter	152
6.2 Calibration Method	153
6.3 Experimental Setup of the Hydrogen Deuterium Equilibration Loop	155
6.4 Measurements	157
6.4.1 Preparations and Pre-Measurements	157
6.4.2 Calibration Measurements	158
6.5 Discussion of the Measurement Results	159
6.5.1 Calibration Results and Uncertainties	159
6.5.2 Remarks on the use of the Permeator	164
6.5.3 Possible Improvements for Further Reduction of Systematic Uncertainties	166
6.5.4 Upgrade for the Use with Tritium	166
6.6 Conclusions	167
References	168
7 Comparison of Calibration Methods	171
7.1 Discussion of Calibration Results	171
7.2 Implications for the KATRIN Experiment	173
References	175
8 Summary and Outlook	177
8.1 Summary	177
References	182
Appendix A: Statistical Terms	183
Appendix B: Complete Derivation of Integration Formula for Depolarization Measurements	185
Appendix C: Jones Calculations for Polarization Aberrations in the Raman Collection System	195
Appendix D: Measurements of Polarization Aberrations in Raman Cell Windows	199
Appendix E: Error Estimation in Depolarization Ratio Measurements	207
Appendix F: Relation Between Experimental Error of Raman Intensities and Depolarization Ratios	211

Appendix G: Full Tabulation of Measured Depolarization Ratios	215
Appendix H: Demonstration of Bootstrapping on HYDE Data	219
About the Author	223

Accurate Calibration of Raman Systems

At the Karlsruhe Tritium Neutrino Experiment

Schlösser, M.

2014, XII, 225 p. 77 illus., 18 illus. in color., Hardcover
