## Part I The Recurrent Neurofuzzy Model

<b>1</b>	<b>Introduction and Scope of Part I . . . . .</b>	<b>3</b>
1.1	Introduction . . . . .	3
1.2	Recurrent High-Order Neural Networks. . . . .	5
1.3	Functional Representation of Adaptive Fuzzy Systems . . . . .	8
1.3.1	COA Defuzzification and Indicator Functions . . . . .	9
1.4	Outline of Adaptive Dynamic Identification and Control Based on the Neurofuzzy Mode . . . . .	10
1.5	Goals and Outline of Part I . . . . .	15
	References . . . . .	18
<b>2</b>	<b>Identification of Dynamical Systems Using Recurrent Neurofuzzy Modeling . . . . .</b>	<b>25</b>
2.1	The Recurrent Neurofuzzy Model. . . . .	25
2.2	Approximation Capabilities of the Neurofuzzy Model. . . . .	30
2.3	Learning Algorithms for Parameter Identification. . . . .	33
2.3.1	Simple Gradient Descent. . . . .	34
2.3.2	Pure Least Squares . . . . .	36
2.4	Robust Learning Algorithms . . . . .	39
2.5	Simulation Results . . . . .	45
2.5.1	Parameter Identification in a Known Model Structure . . . . .	46
2.5.2	Two Link Robot Arm . . . . .	47
2.6	Summary. . . . .	54
	References . . . . .	54
<b>3</b>	<b>Indirect Adaptive Control Based on the Recurrent Neurofuzzy Model . . . . .</b>	<b>57</b>
3.1	Neurofuzzy Identification of Affine in the Control Systems. . . . .	57
3.1.1	Neurofuzzy Modeling . . . . .	58
3.1.2	Adaptive Parameter Identification. . . . .	61

3.2	The Indirect Control Scheme . . . . .	63
3.2.1	Parametric Uncertainties . . . . .	64
3.2.2	The Method of Parameter Hopping . . . . .	66
3.2.3	Parametric Plus Dynamic Uncertainties . . . . .	71
3.3	Simulation Results on the Speed Regulation of a DC Motor . . . . .	80
3.4	Summary . . . . .	84
	References . . . . .	84
<b>4</b>	<b>Direct Adaptive Neurofuzzy Control of SISO Systems . . . . .</b>	<b>87</b>
4.1	Direct Adaptive Regulation . . . . .	87
4.1.1	Neurofuzzy Modeling . . . . .	88
4.1.2	Adaptive Regulation with Modeling Error Effects . . . . .	90
4.2	Adaptive Tracking . . . . .	104
4.2.1	Complete Matching Case . . . . .	105
4.2.2	Inclusion of a Non-zero Approximation Error . . . . .	109
4.3	Simulation Results . . . . .	111
4.3.1	Inverted Pendulum . . . . .	111
4.3.2	Van der Pol Oscillator . . . . .	113
4.4	Summary . . . . .	117
	References . . . . .	117
<b>5</b>	<b>Direct Adaptive Neurofuzzy Control of MIMO Systems . . . . .</b>	<b>119</b>
5.1	Regulation of MIMO Systems Assuming Only Parametric Uncertainties . . . . .	119
5.2	Robustness Analysis Assuming the Presence of Modeling Errors . . . . .	125
5.2.1	Modeling Errors Depending on System States . . . . .	125
5.2.2	Modeling Errors Depending on System States and a Not-Necessarily-Known Constant Value . . . . .	129
5.3	The Model Order Problem . . . . .	132
5.3.1	Problem Formulation . . . . .	132
5.3.2	Adaptive Regulation . . . . .	133
5.4	State Trajectory Tracking . . . . .	143
5.4.1	The Complete Model Matching Case . . . . .	144
5.4.2	Inclusion of a Non-zero Approximation Error . . . . .	146
5.5	Simulation Results . . . . .	148
5.5.1	Exact Model Order . . . . .	149
5.5.2	Reduced Model Order . . . . .	150
5.5.3	Trajectory Tracking . . . . .	154
5.6	Summary . . . . .	157
	References . . . . .	158

<b>6</b>	<b>Selected Applications</b>	161
6.1	Trajectory Tracking of Robot Manipulators	161
6.1.1	Robot Controller Based on Filtered Tracking Error.	162
6.1.2	Neurofuzzy Model for the Unknown Nonlinear Robot Dynamics.	163
6.1.3	Neurofuzzy Controller and Error System Dynamics	164
6.1.4	Simulation Results	169
6.2	Bioreactor Application	172
6.2.1	Model Description and Control Objective	172
6.2.2	Simulation Results	174
6.3	Experimental Setup and NF Regulation of a DC Motor.	174
6.3.1	Description of the Experiment	176
6.3.2	Experiment	177
6.4	Summary	179
	References	180

## Part II The FCN Model

<b>7</b>	<b>Introduction and Outline of Part II.</b>	185
7.1	Introduction	185
7.2	Basic Notions.	186
7.3	Convergence Peculiarities	189
7.4	Fuzzy Cognitive Networks and Its Mode of Operation	191
7.5	Goals and Outline of Part II.	192
	References	194
<b>8</b>	<b>Existence and Uniqueness of Solutions in FCN</b>	197
8.1	Introduction	197
8.2	The Contraction Mapping Principle in Sigmoidal Nodes	197
8.3	Conditions for the Existence and Uniqueness of Solutions in FCN	202
8.3.1	Conditions Involving Only Weights	204
8.3.2	The Role of the Inclination Parameters	205
8.4	The Effect of Input Nodes	206
8.5	Academic Examples	208
8.6	Discussion and Interpretation of the Results.	212
8.7	Summary	214
	References	214

<b>9</b>	<b>Adaptive Estimation Algorithms of FCN Parameters . . . . .</b>	<b>215</b>
9.1	Introduction . . . . .	215
9.2	Adaptive Estimation Algorithm Based on Linear Parametric Modeling. . . . .	216
9.3	Projection Methods Based on the Existence and Design Conditions . . . . .	219
9.3.1	Projection Method 1 . . . . .	219
9.3.2	Projection Method 2 . . . . .	220
9.3.3	Concurrent Projection Method . . . . .	221
9.4	Adaptive Estimation Algorithm Based on the Bilinear Parametric Model . . . . .	221
9.5	The Projection Methods for the Bilinear Model . . . . .	225
9.5.1	Projection Method 1: Relation to FCN Definition. . . . .	225
9.5.2	Projection Method 2: Relation to Contraction Conditions . . . . .	226
9.6	Simulations and Comparisons Between the Two Parametric Models . . . . .	238
9.6.1	Simulation Results Based on the LPM . . . . .	239
9.6.2	M: Comparisons Between the Two Models . . . . .	243
9.7	Summary . . . . .	249
	References . . . . .	249
<b>10</b>	<b>Framework of Operation and Selected Applications. . . . .</b>	<b>251</b>
10.1	Framework of Operation of FCNs . . . . .	251
10.1.1	Training Using Close Interaction with the Real System . . . . .	251
10.1.2	Weight Updating Procedure . . . . .	252
10.2	Storage Mechanism Based on Fuzzy Rule Databases . . . . .	252
10.2.1	Using the Acquired Knowledge . . . . .	256
10.3	Applications. . . . .	257
10.3.1	Conventional Benchmark: The Inverted Pendulum . . . . .	258
10.3.2	Small Hydro Electric Power Plant . . . . .	278
10.3.3	Coordination of a Smart Grid with Renewable Power Generation Sources . . . . .	291
10.4	Summary . . . . .	305
	References . . . . .	306
	<b>Epilogue . . . . .</b>	<b>307</b>
	<b>Index . . . . .</b>	<b>311</b>

System Identification and Adaptive Control  
Theory and Applications of the Neurofuzzy and Fuzzy  
Cognitive Network Models

Boutalis, Y.; Theodoridis, D.; Kottas, T.; Christodoulou,  
M.A.

2014, XII, 313 p. 120 illus., 56 illus. in color., Hardcover
