Part I Communities in Networks

| | | |
|----------|--|-----------|
| 2 | Community Detection | 11 |
| 2.1 | Modularity | 11 |
| 2.2 | Canonical Community Detection | 13 |
| 2.2.1 | Reichardt and Bornholdt | 15 |
| 2.2.2 | Arenas, Fernández and Gómez | 18 |
| 2.2.3 | Ronhovde and Nussinov | 19 |
| 2.2.4 | Constant Potts Model | 20 |
| 2.2.5 | Label Propagation | 20 |
| 2.2.6 | Random Walker | 21 |
| 2.2.7 | Infomap | 23 |
| 2.2.8 | Alternative Clustering Methods | 27 |
| 2.3 | Algorithms | 29 |
| 2.3.1 | Simulated Annealing | 29 |
| 2.3.2 | Greedy Improvement | 32 |
| 2.3.3 | Louvain Method | 33 |
| 2.3.4 | Eigenvector | 34 |
| 2.4 | Benchmarks | 37 |
| 2.4.1 | Test Networks | 37 |
| 2.4.2 | Comparing Partitions | 39 |
| 2.4.3 | Results | 42 |
| | References | 45 |
| 3 | Scale Invariant Community Detection | 49 |
| 3.1 | Issues with Modularity | 49 |
| 3.1.1 | Resolution Limit | 49 |
| 3.1.2 | Non-locality | 54 |
| 3.1.3 | Spuriously High Modularity | 55 |

| | | |
|--|---|------------|
| 3.2 | Resolution Limit in Other Models | 57 |
| 3.2.1 | RB Model | 57 |
| 3.2.2 | AFG Model | 61 |
| 3.2.3 | CPM and RN | 63 |
| 3.3 | Scale Invariance | 65 |
| 3.3.1 | Relaxing the Null Models | 66 |
| 3.3.2 | Defining Scale Invariance | 67 |
| | References | 74 |
| 4 | Finding Significant Resolutions | 75 |
| 4.1 | Scanning Resolution Parameter | 75 |
| 4.2 | Significance of Partition | 79 |
| 4.2.1 | Preliminaries | 80 |
| 4.2.2 | Subgraph Probability | 81 |
| 4.2.3 | Asymptotic Analysis | 84 |
| 4.2.4 | Scanning for Significance | 88 |
| 4.2.5 | Optimizing Significance | 89 |
| | References | 91 |
| 5 | Modularity with Negative Links | 93 |
| 5.1 | Social Balance | 93 |
| 5.1.1 | Frustration | 94 |
| 5.2 | Weighted Models | 95 |
| 5.3 | Implementation and Benchmark | 98 |
| | References | 101 |
| 6 | Applications | 103 |
| 6.1 | Communities in International Relations | 103 |
| 6.1.1 | Direct Trade and Conflict | 105 |
| 6.1.2 | Trading Communities and Conflict | 107 |
| 6.1.3 | The Trade Network | 109 |
| 6.1.4 | Results | 112 |
| 6.2 | Scientific Communities and Negative Links | 115 |
| 6.2.1 | Effect of Negative Links | 117 |
| 6.2.2 | Dissensus or Specialization? | 119 |
| 6.2.3 | A Public Debate | 121 |
| | References | 124 |
| Part II Social Balance and Reputation | | |
| 7 | Social Balance | 129 |
| 7.1 | Balanced Triads | 130 |
| 7.2 | Balanced Cycles | 133 |

| | | |
|-----------|---|------------|
| 7.3 | Weak Social Balance | 137 |
| | References | 140 |
| 8 | Models of Social Balance | 143 |
| 8.1 | Discrete Models | 143 |
| 8.1.1 | Local Triad Dynamics. | 144 |
| 8.1.2 | Constrained Triad Dynamics | 146 |
| 8.2 | Continuous Time Squared Model | 148 |
| 8.2.1 | Normal Initial Condition | 150 |
| 8.2.2 | Generic Initial Condition | 153 |
| 8.3 | Continuous Time Transpose Model. | 158 |
| 8.3.1 | Normal Initial Condition | 159 |
| 8.3.2 | Generic Initial Condition | 163 |
| 8.3.3 | Genericity | 168 |
| | References | 171 |
| 9 | Evolution of Cooperation | 173 |
| 9.1 | Game Theory. | 173 |
| 9.1.1 | Finite Population Size | 176 |
| 9.1.2 | Fixation Probability for 2×2 Games | 178 |
| 9.1.3 | Infinite Population Size. | 184 |
| 9.1.4 | Prisoner's Dilemma | 189 |
| 9.2 | Towards Cooperation | 191 |
| 9.2.1 | Direct Reciprocity | 191 |
| 9.2.2 | Indirect Reciprocity | 194 |
| 9.3 | Private Reputation | 204 |
| | References | 209 |
| 10 | Ranking Nodes Using Reputation | 211 |
| 10.1 | Ranking Nodes. | 211 |
| 10.2 | Including Negative Links. | 214 |
| 10.3 | Convergence and Uniqueness. | 219 |
| | References | 221 |
| 11 | Conclusion | 223 |
| | References | 224 |
| | Biography of Author | 225 |
| | Index | 227 |

Algorithms and Dynamical Models for Communities and
Reputation in Social Networks

Traag, V.

2014, XIV, 229 p. 40 illus., 19 illus. in color., Hardcover

ISBN: 978-3-319-06390-4
