Part I Antimicrobial Peptides: Mechanism of Action, Selectivity and Biological Activity

1	Introduction	3
1.1	Antimicrobial Peptides	3
1.2	The Rising Problem of Multidrug Bacterial Resistance	4
1.3	Models for AMPs Activity	5
1.4	Selectivity	6
1.5	Relationship Between Function and Structure	9
	References	9
2	Techniques	11
2.1	Fluorescence Spectroscopy	11
2.1.1	Steady-State Fluorescence	12
2.1.2	Time-Resolved Fluorescence	13
2.1.3	FRET	14
2.1.4	Fluorescence Anisotropy	15
2.2	Neutron Reflectivity	16
	References	17
3	Materials and Methods	19
3.1	Materials	19
3.2	Peptide Synthesis	19
3.3	Liposomes Preparation	20
3.4	Spectroscopic Measurements	21
3.5	Turbidity Measurements	21
3.6	Osmolarity Measurements	22
3.7	Membrane-Perturbing Activity Experiments	22
3.8	Water-Membrane Partition Experiments	23
3.9	Molecular Dynamics Simulations of P5 and P5Del	23
3.10	Molecular Dynamics Simulations of GAIV	24
3.11	Neutron Reflectometry Experiments	24
3.12	NR Data Analysis	25
	References	26

4	Results and Discussion	29
4.1	Membrane Thickness and the Mechanism of Action of Trichogin GAIV	29
4.1.1	Trichogin GAIV	29
4.1.2	Neutron Reflectivity Experiments	32
4.1.3	Molecular Dynamics Simulations	36
4.1.4	Vesicles Leakage Experiments	42
4.1.5	Discussion	42
4.2	Selectivity	46
4.2.1	Role of Pro Residues in AMPs Sequences	46
4.2.2	The P5 Peptide	47
4.2.3	Pro Presence and Function in Proteins	48
4.2.4	P5 Analogues	49
4.2.5	Antimicrobial and Hemolytic Activity	49
4.2.6	Membrane-Perturbing Activity of P5 and P5Del	51
4.2.7	Water-Membrane Partition Experiments	55
4.2.8	Peptide Structures in Water and Membranes	61
4.2.9	Molecular Dynamics Simulations	64
4.2.10	Discussion	68
4.3	Tuning the Biological Activity	69
4.3.1	Cell-Penetrating Peptides	69
4.3.2	Membrane-Perturbing Effects	72
4.3.3	Water-Membrane Peptide Partition	76
4.3.4	Peptide Location Inside the Bilayer	78
4.3.5	Cell-Penetrating Properties	80
4.3.6	Discussion	81
	References	82

Part II Hydrogel Nanoparticles for Enzyme-Based Therapies

5	Introduction	93
5.1	Enzymes as Drugs	93
5.2	Stability and Administration	94
5.3	Hydrogel Nanoparticles	96
5.4	Aim of the Work	97
5.5	Superoxide Dismutase and Disease	98
	References	99
6	Materials and Methods	103
6.1	Materials	103
6.2	Nanoparticles Synthesis	103
6.3	Light Scattering Measurements	104
6.4	AFM Measurements	104

6.5	Enzymatic Activity Assay	104
6.6	Protein Labeling	105
6.7	Fluorescence Measurements	105
6.8	Fluorescence Recovery After Photobleaching	106
6.9	Enzyme Protection from Thermal Degradation	106
6.10	Synthesis of FLAC	106
6.11	Nanoparticles Uptake Experiments	107
6.12	Nanoparticles Biocompatibility Experiments	108
6.12.1	Trypan Blue Assay	108
6.12.2	Live or Dead Assay	109
	References	110
7	Results and Discussion	111
7.1	Hydrogel Formulation	111
7.2	Bulk Polymerization	112
7.2.1	SOD-Membrane Interaction: Fluorescence Anisotropy	112
7.2.2	SOD-Membrane Interaction: FRET Measurements	113
7.3	Synthesis Protocol	113
7.4	Nanoparticles Characterization	115
7.4.1	Light Scattering Characterization	115
7.4.2	AFM Characterization	116
7.5	Membrane Removal by Detergent Addition	116
7.6	Protein Labeling for FRAP Experiments	118
7.7	Fluorescence Recovery After Photobleaching	119
7.8	Quantification of Entrapped Enzyme	121
7.9	Enzyme Stabilization	126
7.10	FLAC Synthesis and Characterization	127
7.11	Gel Polymerization in the Presence of FLAC	128
7.12	Cell Uptake Experiments	128
7.13	Cell Viability Assays	130
7.13.1	Trypan Blue Assay	130
7.13.2	Live or Dead Assay	130
7.14	Discussion	132
	References	132
	Concluding Remarks	135
	Presentations to Scientific Congresses Derived from this Thesis	139

Peptide and Protein Interaction with Membrane
Systems

Applications to Antimicrobial Therapy and Protein Drug
Delivery

Bobone, S.

2014, XIII, 140 p. 94 illus., 18 illus. in color., Hardcover
