
Contents

1	Introduction	1
1.1	General Principles of Energy Conversion and Management	1
1.2	Energy Transformations in Factories and Buildings	3
1.3	The Plan of the Book	4
2	Power and Energy Measurement Units and Techniques	7
2.1	The SI System and Conversion Factors	7
2.2	Primary Energy Measurement Units	8
2.3	End User Energy Measurement Units	14
2.4	An Outline of the Main Measurement Techniques	15
2.4.1	Liquid and Gas Measurements	15
2.4.2	Electric Energy Flow Measurements	20
2.4.3	Temperature, Pressure, and Other Measurements	23
3	World Energy Demand	25
3.1	Introduction	25
3.2	World Energy Demand and Population	25
3.3	Energy End Users	27
3.3.1	Industry	27
3.3.2	Transport	28
3.3.3	Residential and Non-Residential Buildings	28
3.3.4	Agriculture	28
3.3.5	Energy Industry	28
3.3.6	Non-energy Uses	28
3.4	An Outline of Industrial Energy Consumption	28
4	Utility Plants and Renewable Sources	31
4.1	Introduction	31
4.2	Utility Plants and Renewable Sources, from Input Energy to End Users	31

4.3	Renewable Sources: Solar Energy	32
4.3.1	Hot Water from Solar Energy	32
4.3.2	Photovoltaic Systems	33
4.3.3	Solar Concentrated Solar Power Systems	33
4.4	Renewable Sources: Wind Energy	34
4.5	Renewable Sources: Geothermal Energy	35
4.6	Renewable Sources: Wave, Tidal, and Ocean Thermal Energy	36
4.7	Renewable Sources: Hydraulic Energy	37
4.8	Renewable Sources: Energy from Waste	40
4.9	Energy Storage: Hydro, Mechanical, Electric, Fuel Cell, Thermal Storage	40
4.9.1	Hydro Storage	42
4.9.2	Mechanical Storage	42
4.9.3	Electric Storage	43
4.9.4	Fuel Cells	44
4.9.5	Heat and Cold Storage	46
4.10	Applicability in Factories and in Buildings	48
5	Electrical Substations	49
5.1	Introduction	49
5.2	Basic Principles of Transformer Losses and Efficiency	49
5.3	How to Choose the Most Suitable Transformer	51
5.4	Practical Examples	54
6	Boiler Plants	57
6.1	Introduction	57
6.2	Basic Principles of Combustion	58
6.3	Combustion Efficiency	61
6.4	Fundamentals of Steam Generation	62
6.5	Industrial Boilers	64
6.5.1	Steam Watertube Boilers	68
6.5.2	Steam Firetube Boilers	70
6.5.3	Heat Recovery Boilers	70
6.5.4	Electric/Electrode Boilers	71
6.5.5	Oil Boilers	72
6.6	Technical Parameters of Industrial Steam Boilers	72
6.7	Boiler Losses and Efficiency	73
6.7.1	Input–Output Method	74
6.7.2	Heat-Loss Method	74
6.8	How to Improve Boiler Efficiency	81
6.9	Auxiliary Equipment	84
6.9.1	Heat-Recovery Systems	84
6.9.2	Water Treatment Systems	85
6.9.3	Condensate Return Systems	86

6.10	Computerized Control of Boiler Combustion	88
6.11	Boiler Emission and Environmental Pollution	89
6.11.1	Sulfur Dioxide	89
6.11.2	Nitrogen Oxides	90
6.11.3	Carbon Monoxide	91
6.11.4	Particulate Matter	92
6.11.5	Hydrocarbons	92
6.11.6	Other Pollutants	92
6.11.7	Carbon Dioxide and Greenhouse Gases	93
6.12	Practical Examples	93
7	Electric Distribution Systems from Facilities to End Users	97
7.1	Introduction	97
7.2	Electric Distribution Losses	99
7.3	Power Factor Control	102
7.4	Electrical Drives	105
7.4.1	Basic Principles and Operating Modes of Electrical Machines	107
7.4.2	Basic Principles and Operating Modes of Electrical Drives	109
7.4.3	Application Problems	111
7.5	Electrically Heated End Users	111
7.5.1	Joule Losses Principle	112
7.5.2	Electromagnetic Wave Heating	112
7.5.3	Heat Pumps	113
7.5.4	Mechanical Recompression and Thermocompression of Steam	113
7.6	End Users and Load Management	116
7.7	Practical Examples	117
8	Thermal Fluid Distribution Systems	125
8.1	Introduction	125
8.2	Components of Steam and Other Fluid Systems	125
8.3	Basic Principles of Pipeline Losses and Insulation	127
8.3.1	Flat-Surface Multilayer System (See Fig. 8.2)	131
8.3.2	Cylindrical Surface Multilayer System (See Fig. 8.3)	134
8.3.3	Tanks, Other Equipment	137
8.4	Thermal Energy End Users	137
8.4.1	Heating a Mass by Steam	138
8.4.2	Exchanging Heat Between a Fluid and Steam (See Also Chap. 15)	138
8.4.3	Extraction of Water in Industrial Dryers by Evaporation	138
8.5	Practical Examples	138

9 Cogeneration Plants	141
9.1 Introduction	141
9.2 Forms of Cogeneration and Trigeneration	142
9.3 The Backpressure or Non-condensing Steam Turbine	144
9.4 The Gas Turbine	150
9.5 The Reciprocating Engine	153
9.6 Determining the Feasibility of Cogeneration	155
9.7 Practical Examples	157
10 Facilities: Pumps and Fans	163
10.1 Introduction	163
10.2 Basic Principles of Pump and Fan Operation	165
10.3 Methods of Regulating the Working Point	170
10.3.1 Dissipative Methods for Pumps and Fans	170
10.3.2 Non-dissipative Methods for Pumps and Fans	171
10.4 Comparison Between Dissipative and Non-dissipative Regulation Methods	173
10.5 Pump and Fan Regulation Methods	175
10.6 Practical Examples	175
11 Facilities: Gas Compressors	179
11.1 Introduction	179
11.2 Basic Principles of Compressed-Air Systems	180
11.2.1 Isothermal Compression	180
11.2.2 Adiabatic Compression	180
11.2.3 Polytrophic Compression	182
11.3 Auxiliary Equipment	186
11.4 Technical Data on Industrial Air Compressors and Control Systems	187
11.5 The Control of Air Compressors	190
11.6 Compressed-Air Systems: Distribution Lines and End Users	191
11.6.1 The Distribution Lines	191
11.6.2 The End Users	192
11.7 Energy-Saving Investments	195
11.8 Practical Examples	195
12 Facilities: Cooling Systems	199
12.1 Introduction	199
12.2 Basic Principles of Vapor-Compression Systems	199
12.2.1 Vaporization (Process from 4 to 1' or 1)	201
12.2.2 Compression (Process from 1 to 2s or to 2)	202
12.2.3 Condensation (Process from 2 to 3' or 3)	203
12.2.4 Expansion (Process from 3' or 3 to 4)	203
12.2.5 Practical Vapor-Compressor Cycles	205

12.3	Coolant Properties and Applications	205
12.4	The Main Components of Vapor-Compression Systems	207
12.4.1	Evaporator	207
12.4.2	Compressor	207
12.4.3	Condenser	208
12.4.4	Expansion Valve	210
12.5	Cascade and Multistage Systems	210
12.6	Absorption Refrigerating Systems	210
12.7	Brayton Refrigeration Cycle	213
12.8	Energy Saving and Computer Control	214
12.9	Heat Pump Operation	215
12.10	Practical Examples	216
13	Facilities-HVAC Systems	221
13.1	Introduction	221
13.2	Basic Principles of HVAC Systems	222
13.2.1	Typical Air Conditioning Processes	227
13.3	Heating and Cooling Load Calculation	229
13.4	Typical HVAC Systems	231
13.4.1	All-Air Systems	232
13.4.2	All-Water Systems	233
13.4.3	Air-Water Systems	233
13.4.4	Individual Units	233
13.4.5	Radiant Systems for Heating	233
13.5	Centralized Control	234
13.6	Energy-Saving Systems	234
13.7	Practical Examples	235
14	Facilities: Lighting	241
14.1	Introduction	241
14.2	Basic Principles of Lighting Systems and Definitions	241
14.3	Typical Lighting Systems and Related Equipment	242
14.3.1	Incandescent Lamps	244
14.3.2	Fluorescent Lamps	246
14.3.3	High-Intensity Discharge Lamps	246
14.3.4	Light-Emitting Diode Lamps	247
14.3.5	Luminaires	247
14.3.6	Lighting Control	248
14.4	How to Choose a Lighting System	249
14.5	Energy-Saving Opportunities	250
14.6	Practical Examples	250
15	Heat Exchange and Recovery in Process and Facilities	255
15.1	Introduction	255
15.2	Opportunities for Heat Recovery from Process and Facility Plants	255

15.3	Heat Exchange and Recovery Systems	257
15.4	Basic Principles of Heat Exchanger Operation	257
15.5	Preliminary Evaluation Criteria for Heat Exchangers	264
15.5.1	The Log-Mean Temperature Method	264
15.5.2	Effectiveness-NTU Method	265
15.6	A Classification of Heat Exchangers and Their Selection Criteria	267
15.6.1	Shell and Tube Heat Exchanger	267
15.6.2	Double-Pipe Heat Exchanger	267
15.6.3	Gasketed-Plate Heat Exchanger	267
15.6.4	Welded-Plate Exchanger	268
15.6.5	Hot-Gas-to-Liquid Convective Bank System	268
15.6.6	Gas-to-Gas Recuperative Heat Exchanger	268
15.6.7	Heat Pipe Exchanger	268
15.6.8	Rotary Regenerator	269
15.7	Practical Examples	269
16	Waste and Energy Recovery	273
16.1	Introduction	273
16.2	Waste Management	274
16.3	Energy Recovery from Waste	276
16.4	Waste and Energy Management Functions in Industry	277
17	Energy Management Strategies for Control and Planning	279
17.1	Introduction	279
17.2	The Different Steps of an Energy Management Approach	280
17.3	Preliminary Technical and Economic Evaluation of Energy-Saving Investments	291
17.4	Off-Line and On-Line Procedures for Energy Accounting	291
17.5	Feasibility Studies and Financing	292
17.6	Personnel Training	293
17.7	A Successful Energy Management Program	293
17.8	Centralized Control of Process and Facility Plants	294
17.9	Practical Examples	296
18	Education in Energy Conversion and Management	297
18.1	Introduction	297
18.2	The Role of University	297
18.3	Personnel Training	298
18.4	Awareness of Energy Conversion and Management as an Intersectoral Discipline	299
19	Economic Analysis of Energy-Saving Investments	301
19.1	Introduction	301
19.2	Methods Not Using Life Cycle Costing	301
19.2.1	Payback Method	301
19.2.2	Investors' Rate of Return (ROR) Method	302

19.3	Methods Using Life Cycle Costing	302
19.3.1	Present Worth Method	303
19.3.2	Internal Rate of Return (IRR)	305
19.4	Case Studies	305
20	Conclusions	311
	References	315
