Part I International Cramér Symposium on Insurance Mathematics

1	International Cramér Symposium on Insurance Mathematics (ICSIM)	3
	Dmitrii Silvestrov and Anders Martin-Löf	
1.1	ICSIM	3
1.2	Sponsors	5
1.3	Committees	5
	Reference	6
2	Harald Cramér and Insurance Mathematics	7
	Anders Martin-Löf	
2.1	The Early Years	7
2.2	Career and Theoretical Development	8
	References	13
3	100 Years of the Scandinavian Actuarial Journal	15
	Boualem Djehiche and Arne Sandström	
3.1	Foundation of the Journal	15
3.2	The Scandinavian Actuarial Journal	16
	References	17

Part II Modern Risk Theory and Its Applications

4	A Note on Gerber–Shiu Functions with an Application	21
	Hanspeter Schmidli	
4.1	Introduction	21
4.2	Gerber–Shiu Functions in the Non-Discounted Case $\alpha = 0$. . .	22
4.3	Change of Measure and the Discounted Case	26
4.4	Discounted Capital Injections	28
4.4.1	Small Claims	30

4.4.2	Large Claims	31
4.4.3	Intermediate Cases	33
	References	35
5	Improved Asymptotics for Ruin Probabilities	37
	Dmitrii Silvestrov	
5.1	Introduction	37
5.2	Nonlinearly Perturbed Renewal Equation.	38
5.3	Asymptotic Expansions in the Cramér–Lundberg Approximation	45
5.4	First-Rare-Event Times for Semi-Markov Processes	52
5.5	Stable Approximation for Non-ruin Probabilities	55
5.6	Coupling for Risk Processes	59
5.7	Explicit Estimates for the Rate of Convergence in the Cramér–Lundberg Approximation for Ruin Probabilities	64
	References	65
6	Exponential Asymptotical Expansions for Ruin Probability in a Classical Risk Process with Non-polynomial Perturbations	69
	Ying Ni	
6.1	Introduction	69
6.2	The Perturbed Risk Process	71
6.2.1	Diffusion Approximation and the Cramér–Lundberg Approximation for the Ruin Probability	73
6.3	The Perturbed Risk Process with Non-polynomial Perturbations	74
6.4	Exponential Asymptotic Expansions for the Ruin Probability.	77
6.5	Applications.	79
6.5.1	Ruin Probability Under the Diffusion Approximation Setting	79
6.5.2	Ruin Probability Under the Cramér–Lundberg Approximation Setting	83
6.6	Proofs	86
6.6.1	Proof of Corollary 6.1.	86
6.6.2	Proof of Proposition 6.1	86
6.6.3	Proof of Proposition 6.2	86
6.6.4	Proof of Theorem 6.2	87
6.6.5	Proof of Corollary 6.2.	91
6.6.6	Proof of Corollary 6.3.	92
	References	92

7	Asymptotics of Ruin Probabilities for Perturbed Discrete Time Risk Processes	95
	Mikael Petersson	
7.1	Introduction	95
7.2	Perturbed Renewal Equations.	96
7.3	Perturbed Risk Processes.	98
7.4	Asymptotic Expansions	101
7.4.1	Asymptotic Expansion for the Root of the Characteristic Equation	102
7.4.2	Asymptotic Expansion for the Renewal Limit	103
7.4.3	Approximations of Ruin Probabilities	104
7.4.4	Modification of Perturbation Conditions	105
7.5	Proof of Theorem 7.3	108
	References	111
8	Coherent Risk Measures Under Dominated Variation	113
	Dimitrios G. Konstantinides and Christos E. Kountzakis	
8.1	Distributions, Wedges and Risk Measures	113
8.2	Adjusted Expected Shortfall.	118
8.3	Optimisation in $L^{1+\varepsilon}$	121
8.3.1	Estimation of $AES_{a,b}(Z_T)$	124
8.4	Proofs	126
	References	138
9	Estimation of the Ruin Probability in Infinite Time for Heavy Right-Tailed Losses	139
	Abdelaziz Rassoul	
9.1	Introduction	139
9.2	Defining the Estimator	142
9.3	Main Result.	143
9.3.1	Confidence Bounds.	145
9.4	Simulation Study	145
9.5	Proof of Theorem 1	145
	References	150

Part III Stochastic Modelling of Insurance Business

10	A Simulation-Based ALM Model in Practical Use by a Norwegian Life Insurance Company	155
	Kjersti Aas, Linda R. Neef, Dag Raabe and Ingeborg D. Vårli	
10.1	Introduction	155
10.2	Solvency Capital Requirement and Market Value of Liabilities.	156

10.3	Liability Model	158
10.4	Balance Sheet for a Norwegian Life Insurance Company	160
10.5	Asset Models	160
10.5.1	Interest Rate Model	161
10.5.2	Credit Bonds	162
10.5.3	Other Assets	163
10.5.4	Management Actions	163
10.6	Balance Sheet Operations	163
10.7	Numerical Results	165
10.7.1	Portfolio Characteristics	165
10.7.2	Asset Model Parameters	165
10.7.3	Technical Details	167
10.7.4	Selected Results	167
10.8	Summary and Discussion.	170
	References	170
11	Predicting Future Claims Among High Risk Policyholders Using Random Effects.	171
	Clara-Cecilie Günther, Ingunn Fride Tvete, Kjersti Aas, Jørgen Andreas Hagen, Lars Kvifte and Ørnulf Borgan	
11.1	Introduction	172
11.2	Data	172
11.3	Models, Estimation and Prediction	174
11.3.1	Fixed and Mixed Effects Models	174
11.3.2	<i>A Posteriori</i> Risk Distributions and Expected Number of Claims	175
11.3.3	Parameter Estimation	176
11.4	Results	177
11.4.1	In-Sample Evaluation	177
11.4.2	Out-of-Time Validation.	180
11.5	Discussion	183
	References	185
12	Disability Insurance Claims Study by a Homogeneous Discrete Time Alternating Renewal Process.	187
	Guglielmo D'Amico, Fulvio Gismondi, Jacques Janssen and Raimondo Manca	
12.1	Introduction	187
12.2	Discrete Time Homogeneous Alternating Renewal Processes	188
12.3	The Discrete Time Homogeneous Alternating Renewal Process Algorithm	192
12.4	The Temporary Disability Insurance Studied by a Discrete Time Alternating Renewal Model.	193

12.4.1	The Insurance Problem	193
12.4.2	An Example.	194
12.5	Conclusion.	196
	References	196

Part IV New Mathematical Problems in Life and Non-Life Insurance

13	Analysis of the Stochasticity of Mortality Using Variance Decomposition	199
	Erland Ekheden and Ola Hössjer	
13.1	Introduction	199
13.1.1	Preliminaries	201
13.2	Explorative Data Analysis	202
13.3	Mixed Regression Model for Transformed Data	205
13.4	Basic Model	206
13.4.1	Logit Mortality.	207
13.4.2	Logit Mortality Increments	208
13.5	Variance Decomposition and Overdispersion Test	209
13.6	Data Analysis.	212
13.6.1	Variance Decomposition	213
13.6.2	Residual Plots	214
13.6.3	Estimated and Predicted Mortality Rates	216
13.7	Discussion	217
	References	221
14	The Impact of Stress Factors on the Price of Widow's Pensions.	223
	Yurij Kartashov, Vitalij Golomoziy and Nikolai Kartashov	
14.1	Introduction	223
14.2	Stability of Time-Inhomogeneous Markov Chains	224
14.3	Maximal Coupling	225
14.3.1	Introduction	225
14.3.2	Decoupling for One Step.	226
14.3.3	Coupling for One Step	227
14.3.4	Trajectories Development	228
14.4	Application to the Widow's Pension.	229
14.4.1	Introduction	229
14.4.2	Connection with Actuarial Functions	230
14.4.3	Markov Model	231
14.4.4	Upper Bound on the Stress Factor Impact	232
14.4.5	Numerical Example: Simple Geometrical Model	232
14.4.6	Numerical Example: ILT Mortality Data	233
14.4.7	Stress Factor Nature	234
	References	236

15	The Design of an Optimal Bonus-Malus System Based on the Sichel Distribution	239
	George Tzougas and Nicholas Frangos	
15.1	Introduction	239
15.2	The Design of an Optimal BMS Based on the A Posteriori Criteria	241
15.2.1	The Negative Binomial Model	241
15.2.2	The Sichel Model	242
15.3	The Design of an Optimal BMS Based on Both the A Priori and the A Posteriori Criteria	245
15.3.1	The Negative Binomial Model	245
15.3.2	The Sichel Model	248
15.4	Application	251
15.4.1	Claim Frequency Models Comparison	252
15.4.2	Optimal BMS Based on the A Posteriori Criteria	253
15.4.3	Optimal BMS Based on Both the A Priori and the A Posteriori Criteria	255
15.5	Conclusions	258
	References	259
16	Bonus-Malus Systems in Open and Closed Portfolios	261
	Rahim Mahmoudvand and Samane Aziznasiri	
16.1	Introduction	261
16.2	Designing a BMS in a Closed Portfolio	263
16.3	Evaluating the Efficiency of a BMS	265
16.3.1	Elasticity	265
16.3.2	Rate of Convergence	266
16.3.3	Asymptotic Relativity	266
16.4	Designing a BMS in an Open Portfolio	266
16.5	Comparison Between Closed and Open Systems in $-1/\text{Top BMSs}$	267
16.5.1	A Real Example	269
16.6	Conclusion	271
	References	271
 Part V Related Topics in Applied and Financial Mathematics		
17	Large Deviations for a Damped Telegraph Process	275
	Alessandro De Gregorio and Claudio Macci	
17.1	Introduction	275
17.2	Preliminaries	277
17.3	The Damped Telegraph Process	277
17.4	Results	279

17.5	Conclusions	285
17.5.1	Comparison Between $\{D(t) : t \geq 0\}$ and $\{S(t) : t \geq 0\}$	286
17.5.2	Open Problems.	288
	References	288
18	Probabilistic Choice with an Infinite Set of Options: An Approach Based on Random Sup Measures	291
	Hannes Malmberg and Ola Hössjer	
18.1	Introduction	292
18.2	Defining the Argmax Measure	293
18.3	Sup Measures, Random Sup Measures, and Upper-Semi Continuous Functions	294
18.3.1	Calculating Argmax on Random Sup Measures	295
18.4	Calculating the Argmax Measure	296
18.5	The Argmax Measure for Homoscedastic Regression Models	300
18.5.1	Some Extreme Value Theory	301
18.5.2	Exponential Offers	301
18.5.3	Non-exponential Offers	306
18.6	Conclusion.	311
	References	311
19	Generalisation of the Damping Factor in PageRank for Weighted Networks.	313
	Christopher Engström and Sergei Silvestrov	
19.1	Introduction	313
19.2	Calculating PageRank	314
19.3	Notation and Definitions	316
19.4	Using the Power Method to Calculate PageRank	319
19.5	Expanding the Definition of PageRank	319
19.5.1	Changes in c	320
19.5.2	Using Weighted Links.	328
19.6	Combining Two Systems.	329
19.6.1	PageRank After Adding a Link from Dangling Nodes in System A to Nodes in System B from Which You Can't Reach a Dangling Node.	330
19.6.2	General Case: Adding a Link from a Node in System A to a Node in System B.	331
19.6.3	Conclusions	332
	References	333

20 Asian Options, Jump-Diffusion Processes on a Lattice, and Vandermonde Matrices	335
Karl Lundengård, Carolyne Ogutu, Sergei Silvestrov and Patrick Weke	
20.1 Introduction	335
20.1.1 Options	336
20.2 Methods for Pricing Asian Options	338
20.2.1 Asian Options	338
20.2.2 Modelling Jumps	340
20.3 Methodology	341
20.3.1 The Black–Scholes Option Pricing Model	341
20.3.2 The CRR Binomial Option Pricing Model	342
20.3.3 Jump Diffusion Option Pricing	343
20.3.4 Pricing Asian Options on the Lattice	346
20.4 General Lattice Construction	347
20.4.1 Binomial Lattice	348
20.4.2 Trinomial Lattice	349
20.4.3 The Quadrinomial Lattice	350
20.4.4 The General Lattice Matrix	352
20.4.5 Calculating Probabilities Using the General Matrix	352
20.4.6 Finding the Jump Size Numerically for an Example Process	356
