

Contents

1	Introduction	1
2	Phase-Type Distributions	5
2.1	Basic Definitions	5
2.1.1	Markov Chains	5
2.1.2	Absorbing Markov Chains and Phase-Type Distributions	7
2.1.3	Analysis of Phase-Type Distributions	10
2.2	Similarity and Equivalence	12
2.2.1	Similarity Transformations	13
2.2.2	Lumping and General Equivalence	14
2.3	Acyclic Phase-Type Distributions	15
2.3.1	Erlang and Hyper-Erlang Distributions	16
2.3.2	Coxian Distributions	20
2.3.3	Canonical Representations	21
2.4	Properties	24
2.5	Concluding Remarks	27
3	Parameter Fitting for Phase Type Distributions	29
3.1	Trace Based Fitting	29
3.1.1	Definition of Traces and Derived Measures	30
3.1.2	Expectation Maximization Approach for General PH Distributions	33
3.1.3	Expectation Maximization Approach for Hyper-Erlang Distributions	40
3.1.4	Expectation Maximization Approach for Canonical Representations	46
3.1.5	Density Based Parameter Fitting	49
3.2	Moments Based Fitting	51
3.2.1	Closed Form Equations	52
3.2.2	Least Squares Based Techniques	60
3.3	Concluding Remarks	62

4 Markovian Arrival Processes	63
4.1 Definition and Basic Results	63
4.1.1 Definition of MAPs	63
4.1.2 Analysis of MAPs	66
4.1.3 Equivalent Representations of MAPs	67
4.1.4 MAPs as Counting Processes	68
4.2 MAPs of Order 2	70
4.3 BMAPs and MMAPs	71
4.4 Properties	73
4.5 Concluding Remarks	74
5 Parameter Fitting of MAPs	75
5.1 Moment and Joint Moment Based Fitting	75
5.1.1 Parameter Fitting for MAPs with Two States	76
5.1.2 A Compositional Approach	79
5.2 Trace Based Fitting of MAPs	80
5.3 Two Phase Approaches	84
5.3.1 Joint Moment Fitting	84
5.3.2 Autocorrelation Fitting	87
5.3.3 Iterative EM Approaches	89
5.4 Fitting of the Counting Process	90
5.5 Concluding Remarks	93
6 Stochastic Models Including PH Distributions and MAPs	95
6.1 Queueing Systems	95
6.1.1 Single Queues	95
6.1.2 Queueing Networks	98
6.2 Modeling Reliability and Availability	102
6.2.1 Modeling Failure and Repair Times	102
6.2.2 Reliability and Availability Models	104
6.3 Simulation Models	105
6.3.1 Generating Random Numbers from PHDs and MAPs	105
6.3.2 Simulation Models with PHDs and MAPs	107
6.4 Concluding Remarks	110
7 Software Tools	111
7.1 Software Tools for Generating PH Distributions	111
7.2 Software Tools for Generating MAPs	112
7.3 Software Tools for Analyzing Models with PHDs and MAPs	113
8 Conclusion	115
References	117
Index	125

Input Modeling with Phase-Type Distributions and
Markov Models

Theory and Applications

Buchholz, P.; Kriege, J.; Felko, I.

2014, XII, 127 p. 42 illus., 35 illus. in color., Softcover
