

# Contents

<b>1</b>	<b>Equilibrium</b>	1
1.1	Many Particles Systems: Kinematics, Timing	1
1.2	Birth of Kinetic Theory	3
1.3	Heat Theorem and Ergodic Hypothesis	6
1.4	Least Action and Heat Theorem	9
1.5	Heat Theorem and Ensembles	12
1.6	Boltzmann's Equation, Entropy, Loschmidt's Paradox	15
1.7	Conclusion	19
	References	20
<b>2</b>	<b>Stationary Nonequilibrium</b>	23
2.1	Thermostats and Infinite Models	23
2.2	Finite Thermostats	25
2.3	Examples of Nonequilibrium Problems	27
2.4	Initial Data	29
2.5	Finite or Infinite Thermostats? Equivalence?	32
2.6	SRB Distributions	34
2.7	Chaotic Hypothesis	36
2.8	Phase Space Contraction in Continuous Time	37
2.9	Phase Space Contraction in Timed Observations	40
2.10	Conclusions	42
	References	43
<b>3</b>	<b>Discrete Phase Space</b>	45
3.1	Recurrence	45
3.2	Hyperbolicity: Stable and Unstable Manifolds	47
3.3	Geometric Aspects of Hyperbolicity: Rectangles	49
3.4	Symbolic Dynamics and Chaos	51
3.5	Examples of Hyperbolic Symbolic Dynamics	54
3.6	Coarse Graining and Discrete Phase Space	55
3.7	Coarse Cells, Phase Space Points and Simulations	57
3.8	The SRB Distribution: Its Physical Meaning	59
3.9	Other Stationary Distributions	61
3.10	Phase Space Cells and Entropy	62

3.11	Counting Phase Space Cells Out of Equilibrium . . . . .	64
3.12	$k_B \log \mathcal{N}$ : Entropy or Lyapunov Function? . . . . .	66
	References . . . . .	67
<b>4</b>	<b>Fluctuations.</b> . . . .	69
4.1	SRB Potentials. . . . .	69
4.2	Chaos and Markov Processes. . . . .	71
4.3	Symmetries and Time Reversal . . . . .	73
4.4	Pairing Rule and Axiom C . . . . .	75
4.5	Large Deviations . . . . .	78
4.6	Time Reversal and Fluctuation Theorem. . . . .	79
4.7	Fluctuation Patterns . . . . .	82
4.8	Onsager Reciprocity, Green-Kubo Formula, Fluctuation Theorem . . . . .	84
4.9	Local Fluctuations: An Example . . . . .	86
4.10	Local Fluctuations: Generalities. . . . .	88
4.11	Quantum Systems, Thermostats and Nonequilibrium . . . . .	90
4.12	Quantum Adiabatic Approximation and Alternatives . . . . .	93
	References . . . . .	95
<b>5</b>	<b>Applications.</b> . . . .	99
5.1	Equivalent Thermostats. . . . .	99
5.2	Granular Materials and Friction . . . . .	101
5.3	Neglecting Granular Friction: The Relevant Time Scales . . . . .	104
5.4	Simulations for Granular Materials. . . . .	106
5.5	Fluids . . . . .	108
5.6	Developed Turbulence . . . . .	111
5.7	Intermittency . . . . .	112
5.8	Stochastic Evolutions . . . . .	116
5.9	Very Large Fluctuations . . . . .	118
5.10	Thermometry. . . . .	120
5.11	Processes Time Scale and Irreversibility . . . . .	122
	References . . . . .	128
<b>6</b>	<b>Historical Comments</b> . . . . .	131
6.1	Proof of the Second Fundamental Theorem. . . . .	131
6.2	Collision Analysis and Equipartition. . . . .	141
6.3	Dense Orbits: An Example . . . . .	150
6.4	Clausius' Version of Recurrence and Periodicity . . . . .	151
6.5	Clausius' Mechanical Proof of the Heat Theorem . . . . .	152
6.6	Priority Discussion of Boltzmann (vs. Clausius) . . . . .	155
6.7	Priority Discussion: Clausius' Reply. . . . .	156
6.8	On the Ergodic Hypothesis (Trilogy: #1) . . . . .	161
6.9	Canonical Ensemble and Ergodic Hypothesis (Trilogy: #2). . . . .	166

6.10	Heat Theorem Without Dynamics (Trilogy: #3) . . . . .	170
6.11	Irreversibility: Loschmidt and “Boltzmann’s Sea” . . . . .	171
6.12	Discrete Phase Space, Count of Its Points and Entropy. . . . .	178
6.13	Monocyclic and Orthodic Systems: Ensembles . . . . .	182
6.14	Maxwell 1866 . . . . .	191
6.14.1	Friction Phenomenology . . . . .	192
6.14.2	Collision Kinematics . . . . .	193
6.14.3	Observables Variation upon Collision. . . . .	193
6.14.4	About the “Precarious Assumption”. . . . .	195
6.14.5	Balance of the Variations of Key Observables. . . . .	195
6.14.6	Towards the Continua. . . . .	196
6.14.7	“Weak” Boltzmann Equation . . . . .	197
6.14.8	The Heat Conduction Example . . . . .	198
	References . . . . .	199

Nonequilibrium and Irreversibility

Gallavotti, G.

2014, XV, 248 p. 24 illus., Hardcover

ISBN: 978-3-319-06757-5
