

# Contents

<b>Spring School of Spectroscopic Data Analyses: Determination of Atmospheric Parameters of B, A, F and G-type Stars—Introduction</b> . . . . .	1
Katrien Uytterhoeven	
<b>Stellar Atmospheres: Basic Processes and Equations</b> . . . . .	9
Giovanni Catanzaro	
<b>How to Build a Model of the Atmosphere and Spectrum</b> . . . . .	25
Robert L. Kurucz	
<b>Model Atmosphere Codes: ATLAS12 and ATLAS9</b> . . . . .	39
Robert L. Kurucz	
<b>Atomic Data: Where to Get Them, How to Use Them</b> . . . . .	53
Tatiana Ryabchikova	
<b>Problems with Atomic and Molecular Data: Including All the Lines</b> . . . . .	63
Robert L. Kurucz	
<b>Spectral Classification: The First Step in Quantitative Spectral Analysis</b> . . . . .	75
Richard Gray	
<b>Effective Temperature Determination</b> . . . . .	85
Barry Smalley	
<b>How to Determine Surface Gravity from Stellar Spectra</b> . . . . .	97
Giovanni Catanzaro	
<b>Stellar Parameters from Photometry</b> . . . . .	111
Barry Smalley	

<b>Spectral Lines Analysis: Rotational Velocity and Velocity Fields. . . . .</b>	<b>121</b>
Giovanni Catanzaro	
<b>Convection and Turbulence. . . . .</b>	<b>131</b>
Barry Smalley	
<b>Diffusion and Its Manifestation in Stellar Atmospheres. . . . .</b>	<b>141</b>
Tatiana Ryabchikova	
<b>Basics of the NLTE Physics. . . . .</b>	<b>149</b>
Jiří Kubát	
<b>NLTE Analysis of Spectra: OBA Stars. . . . .</b>	<b>159</b>
Jiří Kubát and Brankica Šurlan	
<b>NLTE Radiative Transfer in Cool Stars. . . . .</b>	<b>169</b>
Maria Bergemann and Thomas Nordlander	
<b>Analysis of Stellar Spectra with 3-D and NLTE Models. . . . .</b>	<b>187</b>
Maria Bergemann	
<b>Current Status of NLTE Analysis of Stellar Atmospheres. . . . .</b>	<b>207</b>
Jiří Kubát	
<b>Spectroscopic Analysis of Cool Giants and Supergiants. . . . .</b>	<b>217</b>
Maria Bergemann, Rolf-Peter Kudritzki and Ben Davies	
<b>What Influences the Results? . . . . .</b>	<b>233</b>
Barry Smalley	
<b>Solar Abundance Problem. . . . .</b>	<b>245</b>
Maria Bergemann and Aldo Serenelli	
<b>Magnetic Chemically Peculiar Stars. . . . .</b>	<b>259</b>
Markus Schöller and Svetlana Hubrig	
<b>Magnetic Fields. . . . .</b>	<b>269</b>
Markus Schöller and Svetlana Hubrig	
<b>Spectral Synthesis Codes and Methods of Analysis. . . . .</b>	<b>277</b>
Tatiana Ryabchikova	

Contents	xiii
<b>A Gentle Introduction to SME. . . . .</b>	<b>287</b>
Nikolai Piskunov	
<b>ARES + MOOG: A Practical Overview of an Equivalent Width (EW) Method to Derive Stellar Parameters . . . . .</b>	<b>297</b>
Sérgio G. Sousa	

Determination of Atmospheric Parameters of B-, A-, F-  
and G-Type Stars

Lectures from the School of Spectroscopic Data  
Analyses

Niemczura, E.; Smalley, B.; Pych, W. (Eds.)

2014, XVI, 310 p. 128 illus., 59 illus. in color., Hardcover

ISBN: 978-3-319-06955-5
