

Contents

1	The System: Transition Metal Oxides and Their Heterostructures	1
1.1	Introduction	1
1.2	Transition Metal Oxides	2
1.2.1	Crystal Structure	2
1.2.2	Electronic Structure	5
1.3	TMO Heterostructures	12
	References	16
2	The Technique: Resonant X-ray Scattering	19
2.1	Introduction	19
2.2	X-ray Sources: Synchrotron Radiation	20
2.3	Resonant Scattering	22
2.3.1	Basic Principles of X-ray Physics	23
2.3.2	The Interaction of Light with Matter	26
2.3.3	XAS Cross Section	27
2.3.4	Magnetic Scattering: Symmetry Considerations	33
2.3.5	Experimental Access to Reciprocal Space	39
	References	45
3	The Nickelates: A Spin Density Wave	47
3.1	Properties of Bulk RNO	47
3.1.1	Electronic Configuration and the Torrance Phase Diagram	47
3.1.2	The MIT: Charge Disproportionation	49
3.1.3	AFM Order: Noncollinear Spiral	51
3.1.4	A SDW-Nested Fermi Surface	54
3.2	Properties of LNO SLs	55
3.2.1	Reconstructing LNO	55
3.3	Experimental Results	60
3.3.1	Structural Details of LNO SLs	60
3.3.2	Magnetic Order in LNO	68
3.3.3	Magnetic Structure of RNO Films	75
3.3.4	Models: Collinear Versus Noncollinear Spins	77

3.4	Discussion and Conclusions	81
3.4.1	Orbital Polarization Altering the Magnetic Structure	81
3.4.2	Remanent Conductance in the SDW State and the Question of Concomitant CO	83
	References	87
4	The Cuprates: A Charge Density Wave	91
4.1	Properties of Bulk YBCO	91
4.2	CDW Order in YBCO Single Crystals	106
4.2.1	Discussion and Conclusions	116
4.3	CDW Order in YBCO-LCMO Heterostructures	119
4.3.1	Properties of Heterostructured YBCO	119
4.3.2	Experimental Results	120
4.3.3	Discussion and Conclusions	130
	References	135
	Appendix A: The Kramers-Kronig Relations	139
	Appendix B: Quantization of the Light Field	141
	Appendix C: Fermi’s Golden Rule	143
	Appendix D: Mathematica Script to Analyze Azimuthal Dependencies	147

Spin Spirals and Charge Textures in
Transition-Metal-Oxide Heterostructures

Frano, A.

2014, XIV, 149 p. 116 illus., 36 illus. in color., Hardcover

ISBN: 978-3-319-07069-8
