1	Introduction	1
1.1	Understanding the Elementary Particle Physics	1
1.1.1	The Standard Model.	1
1.1.2	The Standard Model as a Phenomenological Model	4
1.1.3	QCD as a Prototype of a Fundamental Theory	6
1.2	New Physics Beyond the Standard Model	8
1.2.1	Beyond-Standard Models from Naturalness	8
1.2.2	Beyond-Standard Models from Analogy with Superconductivity	9
1.3	This Thesis	10
	References	12
2	Dynamical Electroweak Symmetry Breaking	17
2.1	Technicolor Models	17
2.1.1	The Technicolor Dynamics	18
2.1.2	The Extended Technicolor	19
2.1.3	Technicolor Governed by Infrared Fixed Point	21
2.2	Top-Quark Condensation Models	22
2.2.1	The Top-Quark Mass	23
2.2.2	The Electroweak Scale	24
2.2.3	Including the QCD Effect	25
2.2.4	The Higgs Boson Mass	26
	References	27
3	Top-Quark and Neutrino Condensation	29
3.1	Motivation	29
3.2	The Model	30
3.3	Saturation of the Electroweak Scale	31
3.4	Model of Top-Quark and Neutrino Condensation	35
3.4.1	Underlying Lagrangian	36
3.4.2	Symmetries	37
3.4.3	Two Higgs Doublet Description	39
3.4.4	Electroweak Scale and Fermion Masses	40
3.4.5	Higgs Boson Masses	42

3.4.6	Interactions of Mass Eigenstates	44
3.4.7	Renormalization Group Equations	46
3.4.8	Results	47
3.4.9	Discussion	52
3.5	Viability of the Fermion Mass Generation Scenario	54
	References	56
4	Model of Strong Yukawa Dynamics	59
4.1	The Model	60
4.1.1	Spectrum in the Weak Coupling Regime	62
4.1.2	Mass Assumptions	62
4.1.3	Mass Generation	66
4.1.4	Electroweak Symmetry Breaking	69
4.2	Numerical Analysis	70
4.2.1	Abelian Case	71
4.2.2	Non-Abelian Case	75
4.3	Conclusions	80
	References	80
5	Model of Flavor Gauge Dynamics	83
5.1	The Flavor Gauge Model	83
5.2	The Self-Breaking Flavor Gauge Dynamics	84
5.3	The Structure of the Chapter	85
5.4	Lagrangian and Parameters of the Model	86
5.5	Flavor Representation Setting	87
5.5.1	Flavor Representation Setting of Known Fermions	87
5.5.2	Need for Right-Handed Neutrinos	88
5.6	Global Symmetries	95
5.6.1	Approximate Chiral Symmetry	95
5.6.2	Global Symmetry of Electroweakly Charged Sector	96
5.6.3	Global Symmetry of Right-Handed Neutrino Sector	97
5.6.4	Global Symmetries at Quantum Level	98
5.7	Flavor Symmetry Self-Breaking by Masses	100
5.7.1	Fermions	100
5.7.2	Flavor Gauge Bosons	102
5.7.3	Flavor Symmetry Breaking Scale	103
5.7.4	Flavor Effective Charge	104
5.7.5	Schwinger–Dyson Equations for Fermion Self-Energies	105
5.8	Physical View	106
5.8.1	Flavor Symmetry Breaking by the Sterility Condensation	109
5.8.2	Masses from the Sterility Condensation	111
5.8.3	Electroweak Symmetry Breaking Masses	113
5.8.4	Seesaw Mechanism	115

5.9	Spectrum of Majoron and Axion-Like Particles	116
5.9.1	Spontaneously Broken Currents and their Anomalies . . .	117
5.9.2	Coupling Properties of the Standard Majoron	120
5.9.3	Coupling Properties of the Flavor Axion	121
5.10	Robustness of the Flavor Gauge Model	123
	References	123
6	Conclusions	127
6.1	The Top-Quark and Neutrino Condensation Model	127
6.2	The Model of Strong Yukawa Dynamics	128
6.3	The Flavor Gauge Model	128
6.4	Epilogue	129
Appendix A: Approximate Methods of Solving Schwinger–Dyson Equations		131
Appendix B: The Pole Vertices for Nambu–Goldstone Bosons		153
Appendix C: The Fierz Identities		167

Electroweak Symmetry Breaking

By Dynamically Generated Masses of Quarks and
Leptons

Smetana, M.A.

2014, XVIII, 172 p. 26 illus., 11 illus. in color., Hardcover

ISBN: 978-3-319-07072-8
