

Contents

1	Introduction	1
1.1	Devices Based on Graphene	1
1.2	Plasmonic Nanodevices	3
1.3	Objectives and Outline	5
	References	6
 Part I Electronic Nanodevices Based on Graphene		
2	Tight-Binding Description of Graphene Nanostructures	13
2.1	Dispersion Relation of Graphene	13
2.1.1	Dirac Points and Dirac Cones	15
2.1.2	Opening Gaps in Graphene	16
2.2	Electronic Properties of Graphene Nanoribbons	17
2.2.1	Relationship Between Dispersions of the 1-D and 2-D Systems	17
2.2.2	Dependence of the Dispersion Relation on the Model Used	18
2.3	Electronic Transport Through Quantum 1-D Systems	20
2.3.1	Spin-Dependent Transport in 1-D Systems	21
2.3.2	Current Density of a Mode Within the Tight Binding Model	21
	References	22
3	Graphene Nanoring as a Quantum Interference Device	25
3.1	Background: Interference Effects in Quantum Rings	26
3.2	System and Modelling	28
3.3	Results and Discussion	30
3.3.1	Resonance Transmission Bands in Armchair-Edged Nanorings	30
3.3.2	Interference Transmission Bands in Armchair-Edged Nanorings	33

3.3.3	Interference Transmission Bands in Zigzag-Edged Nanorings	35
3.3.4	Current–Voltage Characteristics	35
3.4	Effects of the Edge Disorder.	37
3.5	Summary	38
	References	38
4	Graphene Nanoring as a Source of Spin-Polarized Electrons	41
4.1	System and Modelling	42
4.2	Results and Discussion.	44
4.2.1	Spin-Dependent Transmission Without Side-Gate Voltage.	45
4.2.2	Control of the Current Polarization via the Side-Gate Voltage	46
4.3	Effect of Edge Disorder and Geometric Imperfections	48
4.3.1	Edge Disorder	48
4.3.2	Geometric Imperfections	49
4.3.3	Origin of Fano Resonances in Asymmetric Rings	50
4.4	Summary	52
	References	52
5	Spin-Dependent Negative Differential Resistance in Graphene Superlattices	55
5.1	System and Modelling	56
5.1.1	Tight-Binding Hamiltonian and the QTBM	57
5.1.2	Dirac Theory for aGNRs	57
5.2	Results and Discussion.	61
5.2.1	Transmission for Zero Bias	61
5.2.2	Currents and Spin Polarization for Finite Bias	63
5.3	Effect of Geometric Disorder	65
5.4	Summary	66
	References	67

Part II Electro-Optical Nanodevices

6	Optical Nanoantennas with Tunable Radiation Patterns	71
6.1	Model and Formalism	72
6.2	Numerical Results	74
6.3	Analytical Results and Discussion	78
6.4	Summary	81
	References	82

7	Electro-Optical Hysteresis of Nanoscale Hybrid Systems	85
7.1	Approximations and Formalism.	86
7.2	Bistability Due to Self-Interaction	89
7.3	Electro-Optical Hysteresis.	90
7.4	Non-Adiabatic Branch Flips	91
7.5	Summary	93
	References	94
8	Conclusions and Prospects	97
8.1	Conclusions Regarding Electronic Nanodevices Based on Graphene	97
8.2	Conclusions Regarding Electro-Optical Nanodevices	99
8.3	Prospective Research	100
	References	101
	Appendix A: TMM and QTBM Methods	103
	Appendix B: Green's Tensor in a Stratified Media	111

Modelling of Plasmonic and Graphene Nanodevices

Munárriz Arrieta, J.

2014, XVII, 121 p. 64 illus., 48 illus. in color., Hardcover

ISBN: 978-3-319-07087-2
