1	Introduction	1
	References	6
2	Interaction of Polarizable Particles with Light	9
2.1	Mechanics of Polarizable Point Particles in Coherent Light Fields	10
2.1.1	The Linear Response of a Polarizable Point Particle to Light	11
2.1.2	Absorption, Emission and Rayleigh Scattering of Photons	13
2.1.3	Classical Dynamics of a Polarizable Point Particle Coupled to a Strongly Pumped Cavity Mode	19
2.1.4	Optical Gratings for Matter-Waves	25
2.2	Quantum Mechanics of Polarizable Point Particles in High-Finesse Cavities	33
2.2.1	Quantum Model of a PPP Coupled to Multiple Cavity Modes	34
2.2.2	Eliminating the Quantum Field Dynamics in the Weak Coupling Limit	40
2.2.3	Semiclassical Description of Friction and Diffusion	46
2.3	Mechanics of Spherical Particles in Coherent Light Fields	60
2.3.1	Light Extinction and Light-Induced Forces	62
2.3.2	Optical Standing-Wave Gratings	70
2.3.3	Slowing and Trapping of Microspheres by a Cavity	72
	References	80
3	Near-Field Interference Techniques with Heavy Molecules and Nanoclusters	85
3.1	The Poisson Spot Interferometer (PSI)	86
3.1.1	Basic Properties of the Elementary Poisson-Spot Effect	88
3.1.2	Phase-Space Description of the Ideal Effect	89
3.1.3	Modified Effect in the Presence of Interaction	96

3.2	Talbot-Lau Interferometer (TLI) Scheme	104
3.2.1	Generic Description of the Talbot-Lau Scheme.	108
3.2.2	The Kapitza-Dirac Talbot-Lau Interferometer (KDTLI)	118
3.2.3	The Optical Time-Domain Ionizing Talbot-Lau Interferometer.	122
3.3	Absolute Absorption Spectroscopy in the TLI Scheme.	129
3.3.1	Experimental Setup and Theoretical Description.	130
3.3.2	Dealing with Fluorescence	137
3.4	Mass Limits of the OTITLI Scheme	139
3.4.1	Experimental Methods and Challenges	140
3.4.2	Standard Mass Limitations	143
3.4.3	Test of Spontaneous Localization Models	151
	References	155
4	Classicalization and the Macroscopicity of Quantum Superposition States	161
4.1	A Minimal Modification of Quantum Mechanics.	163
4.1.1	The Operational Framework and the Dynamical Semigroup Assumption	163
4.1.2	Galilean Covariance	165
4.1.3	The Modified Time Evolution of a Single Particle	170
4.1.4	The Modified Time Evolution of a Many-Particle System.	174
4.1.5	Center-of-Mass Motion of Rigid Compounds	185
4.2	Observable Consequences of the Modification	189
4.2.1	Effects of the Single-Particle Classicalization.	190
4.2.2	Explicit Solution for Harmonic Potentials	194
4.2.3	Classicalization of Bose-Einstein Condensates	198
4.2.4	Classicalization of Cooper-Paired Electrons	202
4.3	The Measure of Macroscopicity	211
4.3.1	Definition of the Macroscopicity Measure	212
4.3.2	Assessing the Macroscopicity of Quantum Experiments	214
4.3.3	Concluding Remarks and Future Directions	232
	References	234
5	Conclusion and Outlook	239

Macroscopic Matter Wave Interferometry

Nimmrichter, S.

2014, XIV, 279 p. 38 illus., 18 illus. in color., Hardcover

ISBN: 978-3-319-07096-4
