

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Tasks of Applied Dynamics	1
1.2	Contributions of Analytical Mechanics	2
1.3	Modelling Mechanical Systems	3
1.3.1	Multibody Systems	4
1.3.2	Finite Element Systems	5
1.3.3	Continuous Systems	6
1.3.4	Flexible Multibody Systems	7
1.3.5	Selecting a Mechanical Model	7
1.3.6	Number of Degrees of Freedom	8
<b>2</b>	<b>Basic Kinematics</b>	11
2.1	Free Systems	11
2.1.1	Kinematics of a Mass Point	11
2.1.2	Kinematics of a Rigid Body	17
2.1.3	Kinematics of a Continuum	35
2.2	Holonomic Systems	42
2.2.1	Mass Point Systems	43
2.2.2	Multibody Systems	49
2.2.3	Continuum	51
2.3	Nonholonomic Systems	52
2.4	Relative Motion of the Frame	57
2.4.1	Moving Frame	57
2.4.2	Free and Holonomic Systems	59
2.4.3	Nonholonomic Systems	62
2.5	Linearization of the Kinematics	62
<b>3</b>	<b>Basic Kinetics</b>	67
3.1	Kinetics of a Mass Point	67
3.1.1	Newton Equations	67
3.1.2	Types of Forces	69

3.2	Kinetics of a Rigid Body .....	72
3.2.1	Newton and Euler Equations .....	72
3.2.2	Mass Geometry of a Rigid Body .....	77
3.2.3	Relative Motion of the Frame .....	80
3.3	Kinetics of a Continuum .....	81
3.3.1	Cauchy Equations .....	81
3.3.2	Hooke's Material Law .....	83
3.3.3	Reaction Stress .....	84
<b>4</b>	<b>Principles of Mechanics .....</b>	<b>85</b>
4.1	Principle of Virtual Work .....	85
4.2	Principles of d'Alembert, Jourdain, and Gauss .....	91
4.3	Principle of Minimum Potential Energy.....	94
4.4	Hamilton Principle .....	95
4.5	Lagrange Equations of the First Kind .....	96
4.6	Lagrange Equations of the Second Kind .....	97
<b>5</b>	<b>Multibody Systems.....</b>	<b>99</b>
5.1	Local Equations of Motion.....	100
5.2	Newton-Euler Equations .....	103
5.3	Equations of Motion of Ideal Systems .....	105
5.3.1	Ordinary Multibody Systems .....	106
5.3.2	General Multibody Systems .....	114
5.4	Equations of Reaction of Ideal Systems.....	121
5.4.1	Calculating Reaction Forces .....	121
5.4.2	Strength Estimation .....	125
5.4.3	Mass Balancing in Multibody Systems .....	128
5.5	Equations of Motion and Reaction of Non-ideal Systems.....	130
5.6	Gyroscopic Equations of Satellites .....	132
5.7	Formalisms for Multibody Systems .....	134
5.7.1	Non-recursive Formalisms .....	135
5.7.2	Recursive Formalisms .....	138
<b>6</b>	<b>Finite Element Systems.....</b>	<b>145</b>
6.1	Local Equations of Motion.....	145
6.1.1	Tetrahedral Element.....	146
6.1.2	Three-Dimensional Beam Element.....	148
6.2	Global Equations of Motion .....	153
6.3	Flexible Multibody Systems .....	156
6.3.1	Floating Frame of Reference Formulation .....	157
6.3.2	Absolute Nodal Coordinate Formulation .....	158
6.3.3	Planar Beam Systems .....	160
6.4	Strength Calculation.....	165

<b>7</b>	<b>Continuous Systems</b> .....	167
7.1	Local Equations of Motion .....	167
7.2	Eigenfunctions of a Bar .....	170
7.3	Global Equations of Motion .....	173
<b>8</b>	<b>State Equations of Mechanical Systems</b> .....	177
8.1	Nonlinear State Equations .....	177
8.2	Linear State Equations .....	178
8.3	Transformation of Linear Equations .....	179
8.4	Normal Forms .....	181
<b>9</b>	<b>Numerical Methods</b> .....	185
9.1	Integration of Nonlinear Differential Equations .....	185
9.2	Linear Algebra of Time-Invariant Systems .....	188
9.3	Comparison of Mechanical Models .....	191
<b>A</b>	<b>Mathematical Tools</b> .....	195
A.1	Representation of Functions .....	195
A.2	Matrix Algebra .....	196
A.3	Matrix Analysis .....	199
A.4	List of Important Symbols .....	200
	<b>Bibliography</b> .....	207
	<b>Index</b> .....	211

Applied Dynamics

Schiehlen, W.; Eberhard, P.

2014, XI, 215 p. 78 illus., 3 illus. in color., Hardcover

ISBN: 978-3-319-07334-7
