

# Contents

## Part I Cluster Models

<b>1</b>	<b>Nearest Neighbors for Classifying New Medicines (2 New and 25 Old Opioids)</b>	<b>3</b>
1.1	General Purpose	3
1.2	Specific Scientific Question	3
1.3	Example	3
1.4	Conclusion	10
1.5	Note	10
<b>2</b>	<b>Predicting High-Risk-Bin Memberships (1,445 Families)</b>	<b>11</b>
2.1	General Purpose	11
2.2	Specific Scientific Question	11
2.3	Example	11
2.4	Optimal Binning	12
2.5	Conclusion	15
2.6	Note	15
<b>3</b>	<b>Predicting Outlier Memberships (2,000 Patients)</b>	<b>17</b>
3.1	General Purpose	17
3.2	Specific Scientific Question	17
3.3	Example	17
3.4	Conclusion	20
3.5	Note	20

## Part II Linear Models

<b>4</b>	<b>Polynomial Regression for Outcome Categories (55 Patients)</b>	<b>23</b>
4.1	General Purpose	23
4.2	Specific Scientific Question	23
4.3	The Computer Teaches Itself to Make Predictions	24
4.4	Conclusion	26
4.5	Note	26

<b>5</b>	<b>Automatic Nonparametric Tests for Predictor Categories (60 and 30 Patients)</b>	27
5.1	General Purpose	27
5.2	Specific Scientific Questions	27
5.3	Example 1	27
5.4	Example 2	32
5.5	Conclusion	35
5.6	Note	35
<b>6</b>	<b>Random Intercept Models for Both Outcome and Predictor Categories (55 Patients)</b>	37
6.1	General Purpose	37
6.2	Specific Scientific Question	37
6.3	Example	38
6.4	Conclusion	41
6.5	Note	41
<b>7</b>	<b>Automatic Regression for Maximizing Linear Relationships (55 patients)</b>	43
7.1	General Purpose	43
7.2	Specific Scientific Question	43
7.3	Data Example	43
7.4	The Computer Teaches Itself to Make Predictions	47
7.5	Conclusion	48
7.6	Note	49
<b>8</b>	<b>Simulation Models for Varying Predictors (9,000 Patients)</b>	51
8.1	General Purpose	51
8.2	Specific Scientific Question	51
8.3	Conclusion	55
8.4	Note	55
<b>9</b>	<b>Generalized Linear Mixed Models for Outcome Prediction from Mixed Data (20 Patients)</b>	57
9.1	General Purpose	57
9.2	Specific Scientific Question	57
9.3	Example	57
9.4	Conclusion	60
9.5	Note	60
<b>10</b>	<b>Two-stage Least Squares (35 Patients)</b>	61
10.1	General Purpose	61
10.2	Primary Scientific Question	61
10.3	Example	62

10.4	Conclusion. . . . .	64
10.5	Note . . . . .	64
<b>11</b>	<b>Autoregressive Models for Longitudinal Data (120 Mean Monthly Records of a Population of Diabetic Patients) . . . . .</b>	<b>65</b>
11.1	General Purpose . . . . .	65
11.2	Specific Scientific Question . . . . .	65
11.3	Example . . . . .	66
11.4	Conclusion. . . . .	71
11.5	Note . . . . .	71
<b>Part III</b>	<b>Rules Models</b>	
<b>12</b>	<b>Item Response Modeling for Analyzing Quality of Life with Better Precision (1,000 Patients) . . . . .</b>	<b>75</b>
12.1	General Purpose . . . . .	75
12.2	Primary Scientific Question . . . . .	75
12.3	Example . . . . .	75
12.4	Conclusion. . . . .	79
12.5	Note . . . . .	79
<b>13</b>	<b>Survival Studies with Varying Risks of Dying (50 and 60 Patients) . . . . .</b>	<b>81</b>
13.1	General Purpose . . . . .	81
13.2	Primary Scientific Questions . . . . .	81
13.3	Examples. . . . .	81
	13.3.1 Cox Regression with a Time-Dependent Predictor . . . . .	81
	13.3.2 Cox Regression with a Segmented Time-Dependent Predictor . . . . .	83
13.4	Conclusion. . . . .	85
13.5	Note . . . . .	85
<b>14</b>	<b>Fuzzy Logic for Improved Precision of Dose-Response Data . . . .</b>	<b>87</b>
14.1	General Purpose . . . . .	87
14.2	Specific Scientific Question . . . . .	87
14.3	Example . . . . .	87
14.4	Conclusion. . . . .	90
14.5	Note . . . . .	91

<b>15</b>	<b>Automatic Data Mining for the Best Treatment of a Disease (90 Patients)</b>	93
15.1	General Purpose	93
15.2	Specific Scientific Question	93
15.3	Example	93
15.4	Step 1 Open SPSS Modeler	95
15.5	Step 2 The Distribution Node	95
15.6	Step 3 The Data Adit Node	96
15.7	Step 4 The Plot Node	97
15.8	Step 5 The Web Node	98
15.9	Step 6 The Type and C5.0 Nodes	99
15.10	Step 7 The Output Node	100
15.11	Conclusion	100
15.12	Note	100
<b>16</b>	<b>Pareto Charts for Identifying the Main Factors of Multifactorial Outcomes</b>	101
16.1	General Purpose	101
16.2	Primary Scientific Question	101
16.3	Example	101
16.4	Conclusion	105
16.5	Note	105
<b>17</b>	<b>Radial Basis Neural Networks for Multidimensional Gaussian Data (90 Persons)</b>	107
17.1	General Purpose	107
17.2	Specific Scientific Question	107
17.3	Example	107
17.4	The Computer Teaches Itself to Make Predictions	108
17.5	Conclusion	110
17.6	Note	110
<b>18</b>	<b>Automatic Modeling of Drug Efficacy Prediction (250 Patients)</b>	111
18.1	General Purpose	111
18.2	Specific Scientific Question	111
18.3	Example	111
18.4	Step 1: Open SPSS Modeler (14.2)	112
18.5	Step 2: The Statistics File Node	113
18.6	Step 3: The Type Node	113
18.7	Step 4: The Auto Numeric Node	114
18.8	Step 5: The Expert Node	115
18.9	Step 6: The Settings Tab	116
18.10	Step 7: The Analysis Node	117

18.11	Conclusion. . . . .	117
18.12	Note. . . . .	118
<b>19</b>	<b>Automatic Modeling for Clinical Event</b>	
	<b>Prediction (200 Patients). . . . .</b>	<b>119</b>
19.1	General Purpose . . . . .	119
19.2	Specific Scientific Question . . . . .	119
19.3	Example . . . . .	119
19.4	Step 1: Open SPSS Modeler (14.2). . . . .	120
19.5	Step 2: The Statistics File Node . . . . .	121
19.6	Step 3: The Type Node . . . . .	121
19.7	Step 4: The Auto Classifier Node . . . . .	122
19.8	Step 5: The Expert Tab . . . . .	123
19.9	Step 6: The Settings Tab . . . . .	125
19.10	Step 7: The Analysis Node . . . . .	126
19.11	Conclusion. . . . .	127
19.12	Note . . . . .	127
<b>20</b>	<b>Automatic Newton Modeling in Clinical Pharmacology</b>	
	<b>(15 Alfentanil Dosages, 15 Quinidine Time-Concentration</b>	
	<b>Relationships). . . . .</b>	<b>129</b>
20.1	General Purpose . . . . .	129
20.2	Specific Scientific Question . . . . .	129
20.3	Examples. . . . .	130
	20.3.1 Dose-Effectiveness Study. . . . .	130
	20.3.2 Time-Concentration Study . . . . .	132
20.4	Conclusion. . . . .	134
20.5	Note . . . . .	134
<b>Index</b>	<b>. . . . .</b>	<b>135</b>

Machine Learning in Medicine - Cookbook Two

Cleophas, T.J.; Zwinderman, A.H.

2014, XI, 140 p. 49 illus., Softcover

ISBN: 978-3-319-07412-2
