1	Thermodynamics, Phases, and Phase Diagrams	1
1.1	Thermodynamics System and Its State	2
1.2	The Laws of Thermodynamics	3
1.3	Heterogeneous Systems	5
1.4	Commonly Used Terms and First Glance at Phase Diagrams	7
1.5	Spontaneous Change	12
1.6	Free Energy and Phase Stability of Single-Component System	19
1.7	Pressure Effect of Single-Component Phase Diagram	24
1.8	Free Energy and Stability of Phases in a Binary System	26
1.8.1	Change in Free Energy in an Ideal System	27
1.8.2	Change in Free Energy in a System with Exothermic Transformation	30
1.8.3	Change in Free Energy in a System with Endothermic Transformation	30
1.9	Thermodynamics of Solutions and Phase Diagrams	32
1.9.1	The Chemical Potential and Activity in a Binary Solid Solution	32
1.9.2	Free Energy of Solutions	33
1.10	Lever Rule and the Common Tangent Construction	40
1.11	The Gibbs Phase Rule	43
1.12	Correlation of Free Energy and Phase Diagram in Binary Systems	45
1.13	Ternary Phase Diagrams	53
1.14	Stability Diagrams (Activity Diagrams, etc.)	61
1.15	The Use of Gibbs Energy Diagrams	64
1.15.1	Effect of Pressure on the Phase Equilibrium	73
1.15.2	Ternary Molar Gibbs Energy Diagrams	77
1.16	Interdependence of Chemical Potentials: Gibbs–Duhem Equation	80

1.17	Molar Volume of a Phase and Partial Molar Volumes of the Species	82
1.18	Few Standard Thermodynamic Relations	84
	References	86
2	Structure of Materials	87
2.1	Hierarchical Structure of Materials	87
2.2	Atomic Bonding	87
2.3	Crystal Lattice	89
2.4	Grain Structure	91
2.5	Defects	93
2.5.1	Point Defects	93
2.5.2	Linear Defects	101
2.5.3	Two-Dimensional Defects	102
2.5.4	Volume Defects	103
2.6	Some Examples of Intermediate Phases and Their Crystal Structure	103
2.6.1	Defects in Intermediate Phases	105
2.6.2	Crystal Structures and Point Defects in Ordered Binary Intermetallics on an Example of Ni-, Ti-, and Fe-Aluminides	107
2.6.3	Calculation of Point Defect Formation Energies	108
2.7	Microstructure and Phase Structure	113
	References	114
3	Fick's Laws of Diffusion	115
3.1	Fick's First and Second Laws of Diffusion	115
3.2	Solution of Fick's Second Law to Estimate the Diffusion Coefficient	119
3.2.1	Solution for a Thin-Film Condition	119
3.2.2	Solution for Homogenization (Separation of Variables)	135
	References	139
4	Development of Interdiffusion Zone in Different Systems	141
4.1	Chemical Potential as the Driving Force for Diffusion and Phase Layer Growth in an Interdiffusion Zone	141
4.2	Few Practical Examples	149
4.3	Making Products by a Diffusion Process	160
	References	165
5	Atomic Mechanism of Diffusion	167
5.1	Different Types of Diffusion	167
5.2	Interstitial Atomic Mechanism of Diffusion	173

5.2.1	Relation Between Jump Frequency and the Diffusion Coefficient	173
5.2.2	Random Walk of Atoms	181
5.2.3	Effect of Temperature on the Interstitial Diffusion Coefficient.	184
5.2.4	Tracer Method of Measuring the Interstitial Diffusion Coefficient	187
5.2.5	Orientation Dependence of Interstitial Diffusion Coefficient.	188
5.3	Diffusion in Substitutional Alloys.	191
5.3.1	Measurement of Tracer Diffusion Coefficient	192
5.3.2	Concept of the Correlation Factor.	193
5.3.3	Calculation of the Correlation Factor	196
5.3.4	The Relation Between the Jump Frequency and the Diffusion Coefficient in Substitutional Diffusion	198
5.3.5	Effect of Temperature on Substitutional Diffusion . . .	201
5.3.6	Orientation Dependence in Substitutional Diffusion.	206
5.3.7	Effect of Phase Transitions on Substitutional Diffusion.	213
5.4	Diffusion Mechanisms in Intermetallics.	213
5.4.1	Diffusion in Disordered Intermetallic Compounds . . .	214
5.4.2	Diffusion Mechanisms in Ordered Intermetallic Compounds	216
5.4.3	Six-Jump Cycle Mechanism.	216
5.4.4	Sublattice Diffusion Mechanism.	221
5.4.5	Triple-Defect Diffusion Mechanism	223
5.4.6	Antistructure Bridge Mechanism	225
5.4.7	Interstitial Diffusion Mechanism.	226
5.4.8	Other Diffusion Mechanisms	227
5.5	Correlation Factors of Diffusion in Intermetallic Compounds	228
5.5.1	Calculation of the Probabilities P	230
5.5.2	The Monte Carlo Calculation Scheme.	233
