

# Contents

<b>1</b>	<b>From Calculus to Computation</b>	<b>1</b>
1.1	Why Not Use Naïve Mathematical Methods?	3
1.1.1	Too Many Operations	3
1.1.2	Too Sensitive to Numerical Errors	3
1.1.3	Unavailable	4
1.2	What to Do, Then?	4
1.3	How Is This Book Organized?	4
	References	6
<b>2</b>	<b>Notation and Norms</b>	<b>7</b>
2.1	Introduction	7
2.2	Scalars, Vectors, and Matrices	7
2.3	Derivatives	8
2.4	Little o and Big O	11
2.5	Norms	12
2.5.1	Vector Norms	12
2.5.2	Matrix Norms	14
2.5.3	Convergence Speeds	15
	Reference	16
<b>3</b>	<b>Solving Systems of Linear Equations</b>	<b>17</b>
3.1	Introduction	17
3.2	Examples	18
3.3	Condition Number(s)	19
3.4	Approaches Best Avoided	22
3.5	Questions About $\mathbf{A}$	22
3.6	Direct Methods	23
3.6.1	Backward or Forward Substitution	23
3.6.2	Gaussian Elimination	25
3.6.3	LU Factorization	25
3.6.4	Iterative Improvement	29
3.6.5	QR Factorization	29
3.6.6	Singular Value Decomposition	33

3.7	Iterative Methods . . . . .	35
3.7.1	Classical Iterative Methods . . . . .	35
3.7.2	Krylov Subspace Iteration . . . . .	38
3.8	Taking Advantage of the Structure of $\mathbf{A}$ . . . . .	42
3.8.1	$\mathbf{A}$ Is Symmetric Positive Definite . . . . .	42
3.8.2	$\mathbf{A}$ Is Toeplitz . . . . .	43
3.8.3	$\mathbf{A}$ Is Vandermonde . . . . .	43
3.8.4	$\mathbf{A}$ Is Sparse . . . . .	43
3.9	Complexity Issues . . . . .	44
3.9.1	Counting Flops. . . . .	44
3.9.2	Getting the Job Done Quickly . . . . .	45
3.10	MATLAB Examples . . . . .	47
3.10.1	$\mathbf{A}$ Is Dense . . . . .	47
3.10.2	$\mathbf{A}$ Is Dense and Symmetric Positive Definite . . . . .	52
3.10.3	$\mathbf{A}$ Is Sparse . . . . .	53
3.10.4	$\mathbf{A}$ Is Sparse and Symmetric Positive Definite. . . . .	54
3.11	In Summary. . . . .	55
	References . . . . .	56
<b>4</b>	<b>Solving Other Problems in Linear Algebra . . . . .</b>	<b>59</b>
4.1	Inverting Matrices . . . . .	59
4.2	Computing Determinants. . . . .	60
4.3	Computing Eigenvalues and Eigenvectors . . . . .	61
4.3.1	Approach Best Avoided . . . . .	61
4.3.2	Examples of Applications . . . . .	62
4.3.3	Power Iteration. . . . .	64
4.3.4	Inverse Power Iteration . . . . .	65
4.3.5	Shifted Inverse Power Iteration . . . . .	66
4.3.6	QR Iteration. . . . .	67
4.3.7	Shifted QR Iteration . . . . .	69
4.4	MATLAB Examples. . . . .	70
4.4.1	Inverting a Matrix . . . . .	70
4.4.2	Evaluating a Determinant . . . . .	71
4.4.3	Computing Eigenvalues. . . . .	72
4.4.4	Computing Eigenvalues and Eigenvectors . . . . .	74
4.5	In Summary. . . . .	75
	References . . . . .	76
<b>5</b>	<b>Interpolating and Extrapolating . . . . .</b>	<b>77</b>
5.1	Introduction . . . . .	77
5.2	Examples. . . . .	78

5.3	Univariate Case . . . . .	79
5.3.1	Polynomial Interpolation . . . . .	80
5.3.2	Interpolation by Cubic Splines . . . . .	84
5.3.3	Rational Interpolation . . . . .	86
5.3.4	Richardson's Extrapolation . . . . .	88
5.4	Multivariate Case . . . . .	89
5.4.1	Polynomial Interpolation . . . . .	89
5.4.2	Spline Interpolation . . . . .	90
5.4.3	Kriging . . . . .	90
5.5	MATLAB Examples . . . . .	93
5.6	In Summary . . . . .	95
	References . . . . .	97
<b>6</b>	<b>Integrating and Differentiating Functions . . . . .</b>	<b>99</b>
6.1	Examples . . . . .	100
6.2	Integrating Univariate Functions . . . . .	101
6.2.1	Newton–Cotes Methods . . . . .	102
6.2.2	Romberg's Method . . . . .	106
6.2.3	Gaussian Quadrature . . . . .	107
6.2.4	Integration via the Solution of an ODE . . . . .	109
6.3	Integrating Multivariate Functions . . . . .	109
6.3.1	Nested One-Dimensional Integrations . . . . .	110
6.3.2	Monte Carlo Integration . . . . .	111
6.4	Differentiating Univariate Functions . . . . .	112
6.4.1	First-Order Derivatives . . . . .	113
6.4.2	Second-Order Derivatives . . . . .	116
6.4.3	Richardson's Extrapolation . . . . .	117
6.5	Differentiating Multivariate Functions . . . . .	119
6.6	Automatic Differentiation . . . . .	120
6.6.1	Drawbacks of Finite-Difference Evaluation . . . . .	120
6.6.2	Basic Idea of Automatic Differentiation . . . . .	121
6.6.3	Backward Evaluation . . . . .	123
6.6.4	Forward Evaluation . . . . .	127
6.6.5	Extension to the Computation of Hessians . . . . .	129
6.7	MATLAB Examples . . . . .	131
6.7.1	Integration . . . . .	131
6.7.2	Differentiation . . . . .	134
6.8	In Summary . . . . .	137
	References . . . . .	138
<b>7</b>	<b>Solving Systems of Nonlinear Equations . . . . .</b>	<b>139</b>
7.1	What Are the Differences with the Linear Case? . . . . .	139
7.2	Examples . . . . .	140

7.3	One Equation in One Unknown . . . . .	141
7.3.1	Bisection Method . . . . .	142
7.3.2	Fixed-Point Iteration . . . . .	143
7.3.3	Secant Method . . . . .	144
7.3.4	Newton's Method . . . . .	144
7.4	Multivariate Systems. . . . .	148
7.4.1	Fixed-Point Iteration . . . . .	148
7.4.2	Newton's Method . . . . .	149
7.4.3	Quasi-Newton Methods . . . . .	150
7.5	Where to Start From? . . . . .	153
7.6	When to Stop? . . . . .	154
7.7	MATLAB Examples . . . . .	155
7.7.1	One Equation in One Unknown . . . . .	155
7.7.2	Multivariate Systems. . . . .	160
7.8	In Summary. . . . .	164
	References . . . . .	165
<b>8</b>	<b>Introduction to Optimization . . . . .</b>	<b>167</b>
8.1	A Word of Caution. . . . .	167
8.2	Examples. . . . .	167
8.3	Taxonomy . . . . .	168
8.4	How About a Free Lunch? . . . . .	172
8.4.1	There Is No Such Thing . . . . .	173
8.4.2	You May Still Get a Pretty Inexpensive Meal . . . . .	174
8.5	In Summary. . . . .	174
	References . . . . .	175
<b>9</b>	<b>Optimizing Without Constraint. . . . .</b>	<b>177</b>
9.1	Theoretical Optimality Conditions . . . . .	177
9.2	Linear Least Squares. . . . .	183
9.2.1	Quadratic Cost in the Error . . . . .	183
9.2.2	Quadratic Cost in the Decision Variables . . . . .	184
9.2.3	Linear Least Squares via QR Factorization . . . . .	188
9.2.4	Linear Least Squares via Singular Value Decomposition . . . . .	191
9.2.5	What to Do if $\mathbf{F}^T \mathbf{F}$ Is Not Invertible? . . . . .	194
9.2.6	Regularizing Ill-Conditioned Problems . . . . .	194
9.3	Iterative Methods . . . . .	195
9.3.1	Separable Least Squares . . . . .	195
9.3.2	Line Search . . . . .	196
9.3.3	Combining Line Searches . . . . .	200

9.3.4	Methods Based on a Taylor Expansion of the Cost. . . . .	201
9.3.5	A Method That Can Deal with Nondifferentiable Costs. . . . .	216
9.4	Additional Topics. . . . .	220
9.4.1	Robust Optimization. . . . .	220
9.4.2	Global Optimization. . . . .	222
9.4.3	Optimization on a Budget. . . . .	225
9.4.4	Multi-Objective Optimization. . . . .	226
9.5	MATLAB Examples. . . . .	227
9.5.1	Least Squares on a Multivariate Polynomial Model. . . . .	227
9.5.2	Nonlinear Estimation. . . . .	236
9.6	In Summary. . . . .	241
