

Contents

1	Introduction	1
1.1	The Failure of Reductionism.	2
1.1.1	Langton's Ant	4
1.2	Emergent Phenomenon in Real Systems.	5
1.2.1	Aggregation of Slime Mould Amoebae	6
1.2.2	The Coats of Mammals	7
1.2.3	The Belousov-Zhabotinsky Reaction	9
1.3	The Origin of Intrinsic Noise	12
1.3.1	A Pedagogical Example.	13
1.3.2	The Law of Mass Action	14
1.3.3	The Stochastic Approach	15
	References	16
2	Methods	19
2.1	Stochastic Formulation of Chemical Systems	20
2.1.1	Stochastic Processes	20
2.1.2	Markovian Processes	20
2.1.3	Homogeneous Processes	21
2.1.4	The Master Equation	22
2.1.5	Choosing the Transition Rates	22
2.1.6	Formalism for a General Network	24
2.2	Approximation Schemes for the Master Equation	25
2.2.1	The Deterministic Limit.	25
2.2.2	The Kramers-Moyal Expansion.	26
2.2.3	The Langevin Picture	28
2.2.4	On the Noise Matrix $\mathcal{B}$	28
	References	30
3	Noise-Induced Bistability	31
3.1	The Simplified Togashi-Kaneko Model	32
3.1.1	Analysis in the Deterministic Limit.	34
3.2	The Togashi-Kaneko Numerical Experiment	35

3.3	Analytical Treatment of the Togashi–Kaneko Experiment	38
3.3.1	Obtaining an Approximate Equation	39
3.3.2	The Stationary Distribution	41
3.4	Time-Dependent Analysis for $\lambda = \lambda_c/2$	42
3.4.1	A Map into the Diffusion Equation	44
3.4.2	The Time-Dependent Distribution $P(z, t)$	44
3.4.3	The Statistics of Switches	47
3.5	A General Time-Dependent Analysis	50
3.5.1	The Mean Switching Time for a General λ	50
3.5.2	The Mean Switching Time for $\epsilon = 0$	54
3.5.3	An Experimental Test for Noise-Induced Bistable States	56
3.6	Beyond the Simplified Togashi–Kaneko Scheme	57
3.6.1	A Class of Chemical Schemes	57
3.6.2	A Lyapunov Function	58
3.6.3	Noise-Induced Multistability	59
	References	61
4	Stochastic Waves on Regular Lattices	63
4.1	Model Definition and Its Expansion	64
4.1.1	The Brusselator with Non-local Interaction	64
4.1.2	The van Kampen Expansion	67
4.2	Pattern Formation in the Deterministic System	68
4.2.1	The Turing Mechanism for Pattern Formation	69
4.2.2	The Conditions for Pattern Formation	72
4.3	Stochastic Waves in the Non-local Brusselator	74
4.3.1	Numerical Simulations of the Master Equation	74
4.3.2	The Fokker-Planck Equation for the Fluctuations	77
4.3.3	The Power Spectra of Fluctuations	79
	References	82
5	Stochastic Waves on Complex Network	83
5.1	Model Definition and Its Expansion	84
5.1.1	The Zhabotinsky-Dolnik-Epstein Scheme of Reactions	84
5.1.2	The van Kampen Expansion	87
5.2	Pattern Formation in the Deterministic System	90
5.3	Power Spectra of Fluctuations and Stochastic Patterns	93
5.3.1	Analytical Expressions of the Power Spectra	94
5.3.2	Comparison with Numerical Simulations	96
	References	98
6	Conclusions	99
	References	104

Appendix A: The General Integral for the Mean Switching Time	107
Appendix B: The Derivation of the Mean Time for $\epsilon = 0$	109
About the Author	113

The Influence of Demographic Stochasticity on

Population Dynamics

A Mathematical Study of Noise-Induced Bistable States
and Stochastic Patterns

Biancalani, T.

2014, XVII, 113 p. 37 illus., 16 illus. in color., Hardcover
