

Contents

1	Introduction: The Ingredients of a Good Cosmological Probe	1
1.1	The Cosmic Microwave Background	2
1.2	Large Scale Structures and Perturbation Theory	4
1.3	The (Current) Ruler of the Universe: Dark Energy	6
1.3.1	Models of Dark Energy	6
1.3.2	Probes of the Dark Energy	8
1.4	Shedding Light on the Dark Energy: The Integrated Sachs–Wolfe Effect	9
1.5	A Glimpse at the Dark Components Through the Reionisation . . .	12
	References	12
2	Unravelling the iSW Effect Through the Matter Distribution. . . .	15
2.1	CMB Cross-Correlation with Tracers of Matter.	15
2.1.1	The Principle	15
2.1.2	Theoretical Framework	16
2.1.3	Application to Detectability and Test Case.	19
2.1.4	State-of-the-Art of the iSW Detection	22
2.2	Optimising the Cross-Correlation for iSW Detection	23
2.2.1	Context and Tools.	24
2.2.2	Simulations, Covariance Estimation and Parameter Recovery	24
2.2.3	Tomography for iSW Studies	28
2.3	The Cosmic Infrared Background and the iSW Effect	32
2.3.1	The Blurry Red Light	33
2.3.2	The CIB as an Alternative Tracer of Matter.	34
2.3.3	Predictions on the CIB-CMB Cross-Correlation	37
2.3.4	Accounting for Realistic Conditions	42
2.3.5	Multi-frequency Joint Analysis	45
	References	47

3	The Impact of Identified Superstructures in the CMB	51
3.1	A New Approach to the iSW Effect	51
3.1.1	Narrowing the View	51
3.1.2	The Stacking of Superstructures in the CMB	52
3.1.3	The Gr08 Results: Protocol, Results and Caveats	53
3.2	My Revised and Improved Stacking Protocol	56
3.2.1	Data and Core of the Protocol	56
3.2.2	Gr08 Catalogue: Preparation of the Maps	58
3.2.3	Application to Gr08: Significance and Analysis	64
3.2.4	Refining the Stacking Analysis	66
3.3	Analysis of Additional Voids	69
3.3.1	The Catalogues of Pan et al. and Sutter et al.	70
3.3.2	New Objects, New Results	71
3.3.3	Further Improvement of the Protocol	74
3.4	Precautions	77
3.4.1	Selection Effects	77
3.4.2	Alignment and Overlap Effects	78
3.4.3	Spurious Detections?	80
3.5	What Does Λ CDM Has to Say on the Matter?	81
3.5.1	Too Small or too Large Signal?	81
3.5.2	Is $\sim 10 \mu\text{K}$ too Much?	82
	References	82
4	Towards a Full Modelling of the iSW Effect	85
4.1	Computing the iSW Effect from a Structure: A Step-by-Step Recipe	86
4.1.1	Modelling an Inhomogeneity	86
4.1.2	Applying the LTB Metric to Cosmic Voids	87
4.1.3	“Lighting Up” the Voids	88
4.1.4	Numerical Implementation	92
4.2	The Predicted iSW Effect from Actual Structures	94
4.2.1	Return to the Granett et al. Catalogue	94
4.2.2	First Computations and Predictions	96
4.2.3	Full Modelling of the iSW Profile	98
4.3	Exploring the Limits of the LTB Landscape	101
4.3.1	Assumptions and Their Consequences	101
4.3.2	Dependences on Initial Parameters	104
4.3.3	A Statistical Oddity?	105
	References	106

5	Studying Dark Matter Through the Lens of the Reionisation.	109
5.1	From the First to the Second Light of the Universe	109
5.1.1	The Reionisation of the Universe	109
5.1.2	Physics of the Reionisation and Key Parameters.	110
5.1.3	Observational Constraints.	113
5.2	Contribution of the Decay and Annihilation of Dark Matter to the EoR	117
5.2.1	The Dark Matter Mystery	118
5.2.2	Dark Matter and Reionisation.	119
5.2.3	Recombination Code and Customisation	121
5.2.4	Additional In-depth Analysis	123
5.2.5	Effects on the CMB Spectrum	124
5.3	Constraints on Dark Matter from the Temperature of the IGM	128
5.3.1	Probing the IGM Temperature Evolution	128
5.3.2	Refining the Reionisation Model.	129
5.3.3	Setting Up the Framework	130
5.3.4	Results and Discussion	130
	References	133
6	Conclusions and Perspectives	137
	References	140

The Large Scale Structures

A Window on the Dark Components of the Universe

Ilić, S.

2014, XXI, 140 p. 60 illus., 24 illus. in color., Hardcover

ISBN: 978-3-319-07745-1
