

Contents

1	Lie Groups	1
1.1	Topological Groups	1
1.1.1	Definition and Examples	1
1.1.2	Covering Groups	4
1.2	Haar Measure	5
1.2.1	The Modular Function	7
1.3	Lie Groups and Lie Algebras	10
1.3.1	Lie Algebras	10
1.3.2	Lie Groups and Their Lie Algebras	11
1.3.3	The Exponential Map	13
1.3.4	Ad, Ad and the Killing Form	14
1.3.5	The Universal Enveloping Algebra and Laplacians	17
1.4	Notes and Further Reading	20
2	Representations, Peter–Weyl Theory and Weights	23
2.1	Unitary Group Representations: Basic Concepts, Examples and Schur’s Lemma	23
2.2	Representations of Compact Groups and Locally Compact Abelian Groups	27
2.2.1	Compact Groups: Schur Orthogonality and the Peter-Weyl Theorem	27
2.2.2	Irreducible Representations of Locally Compact Abelian Groups	33
2.3	The Non-commutative Fourier Transform	35
2.4	Characters and Central Functions	39
2.5	Weights	42
2.5.1	The Derived Representation	42
2.5.2	Casimir Operators	44
2.5.3	The Lattice of Weights	46
2.5.4	Roots	46
2.5.5	The Highest Weight	48
2.5.6	Weights, Roots and the Casimir Spectrum	49
2.5.7	The Weyl Group and Dominant Weights	50
2.5.8	The Weyl Formulae	52

2.6	Irreducible Representations of $SU(2)$	55
2.6.1	Irreducible Representations of $\mathfrak{sl}(2, \mathbb{C})$	55
2.6.2	Construction of Irreducible Representations of $SU(2)$	58
2.6.3	Matrix Elements of Irreducible Representations of $SU(2)$	61
2.7	Notes and Further Reading	63
3	Analysis on Compact Lie Groups	65
3.1	The Laplacian in $L^2(G)$	65
3.1.1	Self-Adjointness and Spectrum	65
3.1.2	Sobolev Spaces	69
3.2	Sugiura's Zeta Function	71
3.3	Uniform Convergence of Fourier Series	74
3.4	Fourier Series and Smoothness	76
3.5	Notes and Further Reading	78
4	Probability Measures on Compact Lie Groups	81
4.1	Classes of Probability Measures and Convolution	81
4.2	The Fourier Transform of a Probability Measure	84
4.3	Lo-Ng Positivity	90
4.4	Absolute Continuity	98
4.5	Regularity of Densities	101
4.6	Idempotents and Convolution Powers	104
4.7	Convolution Operators	107
4.8	Recurrence	113
4.9	Notes and Further Reading	117
5	Convolution Semigroups of Measures	119
5.1	Definition and Examples.	119
5.2	Infinite Divisibility and Lévy Processes	122
5.3	The Hunt Semigroup and Its Generator	124
5.3.1	Taylor's Theorem on Lie Groups.	127
5.3.2	Lévy Measure	128
5.3.3	Ramaswami's Lemmas.	129
5.3.4	The Domain of The Generating Function	131
5.3.5	Hunt's Theorem	132
5.4	L^2 -Properties of Hunt Semigroups	139
5.4.1	Self-adjointness	140
5.4.2	Injectivity	143
5.4.3	Analyticity	143
5.4.4	Trace Class	144

5.5	The Lévy-Khintchine Formula on Compact Lie Groups	144
5.6	Gaussian Measures and the Central Limit Theorem	148
5.7	Subordination	154
5.8	Examples of Subordination and Regularity of Densities	157
5.9	Small Time Asymptotics for Subordinated Gaussian Semigroups	160
5.10	Martingale Representation of Lévy Processes	163
5.11	Notes and Further Reading	164
6	Deconvolution Density Estimation.	167
6.1	The Statistical Model	167
6.2	Asymptotic Behaviour of the Estimator	169
6.3	Smoothness Classes of Noise.	172
6.4	Optimal Rates of Convergence	173
6.5	Decompounding.	175
6.6	Statistics and Differential Geometry.	176
6.7	Notes and Further Reading	177
	Appendices	179
	Index	211

Probability on Compact Lie Groups

Applebaum, D.

2014, XXVI, 217 p., Hardcover

ISBN: 978-3-319-07841-0
