

Contents

1	Partitions with Restricted Summands or “the Money Changing Problem”	1
2	The Asymptotic Density of Relatively Prime Pairs and of Square-Free Numbers	7
3	A One-Dimensional Probabilistic Packing Problem	21
4	The Arcsine Laws for the One-Dimensional Simple Symmetric Random Walk	35
5	The Distribution of Cycles in Random Permutations	49
6	Chebyshev’s Theorem on the Asymptotic Density of the Primes	67
7	Mertens’ Theorems on the Asymptotic Behavior of the Primes	75
8	The Hardy–Ramanujan Theorem on the Number of Distinct Prime Divisors	81
9	The Largest Clique in a Random Graph and Applications to Tampering Detection and Ramsey Theory	89
9.1	Graphs and Random Graphs: Basic Definitions	89
9.2	The Size of the Largest Clique in a Random Graph	91
9.3	Detecting Tampering in a Random Graph	99
9.4	Ramsey Theory	104
10	The Phase Transition Concerning the Giant Component in a Sparse Random Graph: A Theorem of Erdős and Rényi	109
10.1	Introduction and Statement of Results	109
10.2	Construction of the Setup for the Proofs of Theorems 10.1 and 10.2	111
10.3	Some Basic Large Deviations Estimates	113
10.4	Proof of Theorem 10.1	115

10.5	The Galton–Watson Branching Process	116
10.6	Proof of Theorem 10.2	120
Appendix A	A Quick Primer on Discrete Probability	133
Appendix B	Power Series and Generating Functions	141
Appendix C	A Proof of Stirling’s Formula	145
Appendix D	An Elementary Proof of $\sum_{n=1}^{\infty} \frac{1}{n^2} = \frac{\pi^2}{6}$	149
