

# Contents

<b>Introduction</b> .....	xiii
<b>1 Main Definitions and Basic Facts</b> .....	1
1.1 Sets .....	1
1.2 Words .....	3
1.2.1 The Origin of Words .....	3
1.2.2 The Free Semigroup .....	4
1.2.3 Orders on Words .....	5
1.2.4 Periodic Words .....	7
1.3 Graphs .....	10
1.3.1 Basic Definitions .....	10
1.3.2 Automata .....	11
1.3.3 Mealy Automata .....	13
1.3.4 Graphs in the Sense of Serre .....	14
1.3.5 Inverse Automata and Foldings .....	15
1.4 Universal Algebra .....	15
1.4.1 Basic Definitions .....	15
1.4.2 Free Algebras in Varieties .....	24
1.4.3 The Garrett Birkhoff Theorem .....	25
1.4.4 Relatively Free Algebras May Not Know Their Ranks. The Jónsson–Algebras .....	26
1.4.5 Locally Finite Varieties .....	26
1.4.6 The Burnside Problem for Varieties of Algebras .....	28
1.4.7 Finitely Based Finite Algebras .....	28
1.4.8 Inherently Non-finitely Based Finite Algebras: The Link Between Finite and Infinite .....	30
1.5 Growth of Algebras .....	36
1.6 Symbolic Dynamics .....	38
1.6.1 Basic Definitions .....	38
1.6.2 Subshifts .....	39
1.6.3 Edge Subshifts .....	44

1.7	Rewriting Systems	44
1.7.1	Basic Definitions	44
1.7.2	Confluence	45
1.7.3	What If a Rewriting System Is Not Confluent? The Art of Knuth–Bendix	49
1.7.4	String Rewriting	51
1.8	Presentations of Semigroups	54
1.8.1	Semigroups and Monoids: Basic Definitions	54
1.8.2	Free and Non-free Semigroups	55
1.8.3	A Characterization of Free Semigroups	56
1.8.4	Congruences, Ideals and Quotient Semigroups	57
1.8.5	String Rewriting and Presentations	58
1.8.6	The Free Group: The Syntactic Definition	61
1.8.7	The Free Group and Ping-Pong	62
1.8.8	Free Groups and Rings of Formal Infinite Linear Combinations	63
1.8.9	The Growth Function, Growth Series and Church–Rosser Presentations	65
1.8.10	The Cayley Graphs	66
1.8.11	Cayley Graphs, Transition Monoids of Automata and Syntactic Monoids of Languages	68
<b>2</b>	<b>Words that Can Be Avoided</b>	71
2.1	An Old Example	71
2.2	Proof of Thue’s Theorem	72
2.3	Square-Free Words	74
2.4	$k$ th Power-Free Substitutions	76
2.5	Avoidable Words	76
2.5.1	Examples and Simple Facts	76
2.5.2	Fusions, Free Sets and Free Deletions	78
2.5.3	The Bean–Ehrenfeucht–McNulty and Zimin Theorem	79
2.5.4	Simultaneous Avoidability	82
2.6	Further Reading and Open Problems	83
2.6.1	Square- and Cube-Free Words	83
2.6.2	Avoidable Words	83
<b>3</b>	<b>Semigroups</b>	85
3.1	Structure of Semigroups	86
3.1.1	Periodic Semigroups	87
3.1.2	Periodic Semigroups with Exactly One Idempotent	88
3.1.3	Finite Nil-Semigroups	88
3.2	Free Semigroups and Varieties	90
3.2.1	Free Rees Factor-Semigroups	90
3.2.2	A Description of Relatively Free Semigroups	91
3.3	The Burnside Problem for Varieties	92
3.3.1	Subshifts and Semigroups	94

3.3.2	An Application of Subshifts to Semigroups .....	96
3.3.3	The Completion of the Proof of Theorem 3.3.4 .....	100
3.4	Brown's Theorem and Uniformly Recurrent Words .....	106
3.5	Burnside Problems and the Finite Basis Property .....	107
3.6	Inherently Non-finitely Based Finite Semigroups .....	108
3.6.1	Some Advanced Semigroup Theory .....	108
3.6.2	A Description of Inherently Non-finitely Based Finite Semigroups .....	115
3.7	Growth Functions of Semigroups .....	125
3.7.1	The Definition .....	125
3.7.2	Chebyshev, Hardy–Ramanujan and Semigroups of Intermediate Growth .....	127
3.8	Inverse Semigroups .....	132
3.8.1	Basic Facts About Inverse Semigroups .....	132
3.8.2	Identities of Finite Inverse Semigroups, Zimin Words, and Subshifts .....	133
3.8.3	Inverse Semigroups of Bi-rooted Inverse Automata .....	136
3.9	Subshifts and Automata. The Road Coloring Problem .....	137
3.9.1	Synchronizing Automata .....	138
3.9.2	The Road Coloring Problem .....	139
3.9.3	An Application of the Road Coloring Theorem to a Classification of Subshifts of Finite Type .....	147
3.10	Further Reading and Open Problems .....	152
3.10.1	Other Applications of Burnside Properties .....	152
3.10.2	Free Semigroups in Periodic Varieties. The Brzozowski Problem .....	154
3.10.3	The Finite Basis Problem for Semigroups .....	154
3.10.4	Inherently Non-finitely Based Finite Monoids .....	156
3.10.5	Identities of Finite Inverse Semigroups .....	156
3.10.6	Growth Functions of Semigroups .....	157
3.10.7	The Road Coloring and the Černý Conjecture .....	159
4	<b>Rings</b> .....	161
4.1	The Basic Notions .....	162
4.2	Free Associative Algebras .....	163
4.3	Commuting Elements in Free Associative Algebras over a Field .....	164
4.4	Burnside-Type Problems for Associative Algebras .....	166
4.4.1	Preliminaries .....	166
4.4.2	Shirshov's Height Theorem .....	170
4.4.3	Growth Function of a Ring Satisfying a Nontrivial Identity .....	174
4.4.4	Inherently Non-finitely Based Varieties of Rings .....	174
4.4.5	The Dubnov–Ivanov–Nagata–Higman Theorem .....	175

4.4.6	Golod Counterexamples to the Kurosh Problem . . . . .	176
4.4.7	Zimin Words and the Baer Radical . . . . .	180
4.5	The Finite Basis Problem . . . . .	183
4.5.1	Basic Facts About Finite Associative Rings . . . . .	183
4.5.2	Positive Result. Identities of Finite Rings . . . . .	186
4.5.3	Negative Result . . . . .	191
4.6	Further Reading . . . . .	194
4.6.1	The Kurosh Problem . . . . .	195
4.6.2	Identities of Rings . . . . .	195
<b>5</b>	<b>Groups</b> . . . . .	197
5.1	Van Kampen Diagrams . . . . .	198
5.1.1	Group Presentations . . . . .	198
5.1.2	Van Kampen Diagrams: The Definition . . . . .	199
5.1.3	Van Kampen Diagrams and Tilings. An Elementary School Problem and Its Non-elementary Solution . . . . .	201
5.1.4	The Three Main Methods of Dealing with van Kampen Diagrams: Bands, Swiss Cheese, and Small Cancellation . . . . .	203
5.2	The Burnside Problems for Groups . . . . .	220
5.2.1	Golod's Counterexample to the Unbounded Burnside Problem for Groups . . . . .	220
5.2.2	The Bounded Burnside Problem. Positive Results . . . . .	221
5.2.3	The Novikov–Adian Theorem . . . . .	222
5.3	The Finite Basis Problem for Groups and Rings . . . . .	242
5.3.1	An Example of R. Bryant and Yu. Kleiman . . . . .	243
5.3.2	Construction of the Algebra $R$ Used in Section 4.5.3 . . . . .	248
5.4	Groups and Identities, Abért's Criterium . . . . .	255
5.5	Subgroups of Free Groups . . . . .	256
5.5.1	The Definition of a 2-Complex and Its Fundamental Group . . . . .	256
5.5.2	Subgroups of Free Groups and Inverse Automata . . . . .	258
5.6	Diagram Groups . . . . .	262
5.6.1	The Squier Complex of a String Rewriting System . . . . .	262
5.6.2	Diagrams as 2-Dimensional Words, Diagram Groups . . . . .	263
5.6.3	Diagram Groups and Squier Complexes . . . . .	265
5.6.4	Diagram Groups. Examples . . . . .	265
5.6.5	Combinatorics on Diagrams . . . . .	266
5.6.6	The R. Thompson Group $F$ . . . . .	272
5.6.7	Multilinear Identities of Non-associative Algebras and Elements of $F$ . . . . .	277
5.6.8	$F$ Is Lawless . . . . .	277
5.6.9	$F$ Does Not Have Non-cyclic Free Subgroups . . . . .	278
5.6.10	Two Church–Rosser Presentations of $F$ . . . . .	279

5.7	Growth of Groups .....	282
5.7.1	Similar Groups Have Similar Growth .....	282
5.7.2	Commutative Groups .....	283
5.7.3	Nilpotent Groups .....	285
5.7.4	Grigorchuk's Group of Intermediate Growth .....	293
5.8	Amenable Groups .....	300
5.8.1	The Free Groups of Orthogonal Matrices and the Hausdorff–Banach–Tarski Paradox .....	301
5.8.2	The First Two Definitions of Amenability .....	305
5.8.3	Følner Sets .....	307
5.8.4	Groups with Tarski Number 4 .....	312
5.8.5	Co-growth and the von Neumann–Day Conjecture ....	313
5.9	Further Reading and Open Problems .....	319
5.9.1	Further Applications of Olshanskii's Method .....	319
5.9.2	Syntactic Properties of Hyperbolic Groups .....	320
5.9.3	Some Semantic Properties of Small Cancellation Groups .....	322
5.9.4	Open Problems About Hyperbolic Group .....	323
5.9.5	The Hanna Neumann Conjecture .....	323
5.9.6	Diagram Groups .....	324
5.9.7	The R. Thompson Group $F$ .....	324
5.9.8	The Finite Basis Problem for Varieties of Groups ....	326
5.9.9	Zel'manov Words and Inherently Non-finitely Based Varieties of Groups .....	326
5.9.10	Amenable Groups .....	327
	<b>References</b> .....	331
	<b>Name Index</b> .....	347
	<b>Subject Index</b> .....	351
