Part I Nonsmooth Analysis and Optimization

1	Theoretical Background	3
1.1	Notations and Definitions	3
1.2	Matrix Calculus	4
1.3	Hausdorff Metrics	6
1.4	Functions and Derivatives	6
2	Convex Analysis	11
2.1	Convex Sets	11
2.1.1	Convex Hulls	13
2.1.2	Separating and Supporting Hyperplanes	14
2.1.3	Convex Cones	22
2.1.4	Contingent and Normal Cones	27
2.2	Convex Functions	32
2.2.1	Level Sets and Epigraphs	37
2.2.2	Subgradients and Directional Derivatives	38
2.2.3	ε -Subdifferentials	47
2.3	Links Between Geometry and Analysis	49
2.3.1	Epigraphs	49
2.3.2	Level Sets	51
2.3.3	Distance Function	53
2.4	Summary	57
	Exercises	57
3	Nonconvex Analysis	61
3.1	Generalization of Derivatives	61
3.1.1	Generalized Directional Derivative	61
3.1.2	Generalized Subgradients	64
3.1.3	ε -Subdifferentials	73
3.1.4	Generalized Jacobians	76

3.2	Subdifferential Calculus	77
3.2.1	Subdifferential Regularity	77
3.2.2	Subderivation Rules	79
3.3	Nonconvex Geometry	94
3.3.1	Tangent and Normal Cones	94
3.3.2	Epigraphs and Level Sets	98
3.3.3	Cones of Feasible Directions	102
3.4	Other Generalized Subdifferentials	104
3.4.1	Quasidifferentials	104
3.4.2	Relationship Between Quasidifferential and Clarke Subdifferential	109
3.4.3	Codifferentials	110
3.4.4	Basic and Singular Subdifferentials	112
3.5	Summary	112
	Exercises	113
4	Optimality Conditions	117
4.1	Unconstrained Optimization	117
4.1.1	Analytical Optimality Conditions	118
4.1.2	Descent Directions	120
4.2	Geometrical Constraints	121
4.2.1	Geometrical Optimality Conditions	122
4.2.2	Mixed Optimality Conditions	123
4.3	Analytical Constraints	126
4.3.1	Geometrical Optimality Conditions	127
4.3.2	Fritz John Optimality Conditions	128
4.3.3	Karush-Kuhn-Tucker Optimality Conditions	130
4.4	Optimality Conditions Using Quasidifferentials	134
4.5	Summary	135
	Exercises	136
5	Generalized Convexities	139
5.1	Generalized Pseudoconvexity	139
5.2	Generalized Quasiconvexity	150
5.3	Relaxed Optimality Conditions	161
5.3.1	Unconstrained Optimization	162
5.3.2	Geometrical Constraints	163
5.3.3	Analytical Constraints	164
5.4	Summary	166
	Exercises	167
6	Approximations of Subdifferentials	169
6.1	Continuous Approximations of Subdifferential	169
6.2	Discrete Gradient and Approximation of Subgradients	175

6.3	Piecewise Partially Separable Functions and Computation of Discrete Gradients	183
6.3.1	Piecewise Partially Separable Functions	183
6.3.2	Chained and Piecewise Chained Functions	185
6.3.3	Properties of Piecewise Partially Separable Functions.	187
6.3.4	Calculation of the Discrete Gradients	193
6.4	Summary	196
	Exercises	197
	Notes and References	199

Part II Nonsmooth Problems

7	Practical Problems	203
7.1	Computational Chemistry and Biology	203
7.1.1	Polyatomic Clustering Problem	203
7.1.2	Molecular Distance Geometry Problem	204
7.1.3	Protein Structural Alignment	207
7.1.4	Molecular Docking	209
7.2	Data Analysis.	211
7.2.1	Cluster Analysis via NSO	211
7.2.2	Piecewise Linear Separability in Supervised Data Classification	215
7.2.3	Piecewise Linear Approximations in Regression Analysis	227
7.2.4	Clusterwise Linear Regression Problems	230
7.3	Optimal Control Problems	233
7.3.1	Optimal Shape Design.	233
7.3.2	Distributed Parameter Control Problems	234
7.3.3	Hemivariational Inequalities.	235
7.4	Engineering and Industrial Applications	235
7.4.1	Power Unit-Commitment Problem	235
7.4.2	Continuous Casting of Steel.	236
7.5	Other Applications	237
7.5.1	Image Restoration.	238
7.5.2	Nonlinear Income Tax Problem	239
8	SemiAcademic Problems.	241
8.1	Exact Penalty Formulation.	241
8.2	Integer Programming with Lagrange Relaxation.	243
8.2.1	Traveling Salesman Problem	243
8.3	Maximum Eigenvalue Problem	244

9	Academic Problems	247
9.1	Small Unconstrained Problems	248
9.2	Bound Constrained Problems	269
9.3	Linearly Constrained Problems	269
9.4	Large Problems	277
9.5	Inequality Constrained Problems	283
	Notes and References	287
 Part III Nonsmooth Optimization Methods		
10	Subgradient Methods	295
10.1	Standard Subgradient Method	295
10.2	Shor's r -Algorithm (Space Dilation Method)	296
11	Cutting Plane Methods	299
11.1	Standard Cutting Plane Method	299
11.2	Cutting Plane Method with Proximity Control	301
12	Bundle Methods	305
12.1	Proximal Bundle and Bundle Trust Methods	305
12.2	Bundle Newton Method	309
13	Gradient Sampling Methods	311
13.1	Gradient Sampling Method	311
14	Hybrid Methods	313
14.1	Variable Metric Bundle Method	313
14.2	Limited Memory Bundle Method	317
14.3	Quasi-Secant Method	320
14.4	Non-Euclidean Restricted Memory Level Method	322
15	Discrete Gradient Methods	327
15.1	Discrete Gradient Method	327
15.2	Limited Memory Discrete Gradient Bundle Method	330
16	Constraint Handling	335
16.1	Exact Penalty	335
16.2	Linearization	336
17	Numerical Comparison of NSO Softwares	339
17.1	Solvers	340
17.2	Problems	343

17.3	Termination, Parameters, and Acceptance of Results	344
17.4	Results	344
17.4.1	Extra-Small Problems	345
17.4.2	Small-Scale Problems	346
17.4.3	Medium-Scale Problems	348
17.4.4	Large Problems	349
17.4.5	Extra Large Problems	351
17.4.6	Convergence Speed and Iteration Path	352
17.5	Conclusions	354
References		357
Index		369

Introduction to Nonsmooth Optimization
Theory, Practice and Software

Bagirov, A.M.; Karmitsa, N.; Mäkelä, M.M.

2014, XVIII, 372 p. 72 illus., Hardcover

ISBN: 978-3-319-08113-7
