

Contents

1	Introduction	1
1.1	History of PSA	3
1.2	Current Strength of PSA	5
	References	6
2	The Nuclear Power Plant with WWER440 Reactors	7
2.1	Overview of the WWER440/V230 Reactor Design	10
2.1.1	The Original Design	10
2.1.2	Safety Upgrading of the WWER440/V230 Reactors	46
2.2	Overview of the WWER440/V213 Reactor Design	63
2.2.1	Original Design	63
2.2.2	Safety Upgrading of the WWER440/V213 Reactors	72
	References	83
3	Level 1 Full Power PSA	85
3.1	Identification of Initiating Events	85
3.2	Accident Sequence Analysis	87
3.2.1	Generic Assumptions	88
3.2.2	Generic Plant Accident Response	89
3.2.3	Examples	91
3.3	System Analysis	120
3.3.1	Examples	121
3.4	Data Analysis	132
3.4.1	Component Failure Data and Calculation of Failure Rate	141
3.4.2	Modelling of Maintenance and Testing	144
3.4.3	Common Cause Failure Probabilities	146
3.4.4	Initiating Event Frequency Calculation	150
3.4.5	Examples	151

3.5	Human Reliability Analysis.	151
3.5.1	Pre-initiator Human Errors	154
3.5.2	Post-initiator Human Errors and Recovery Actions . . .	156
3.5.3	Examples	162
3.6	Internal Fire Analysis.	166
3.6.1	Basic Terms	166
3.6.2	Data Collection and Assessment	167
3.6.3	Definition of Fire Compartments	167
3.6.4	Familiarization with the Internal Events PSA	169
3.6.5	Requirements of the Internal Events PSA	169
3.6.6	Review of Initiating Event	169
3.6.7	Identification of PSA-Related Systems and Components	170
3.6.8	Identification of Human Error Contributions	170
3.6.9	Identification of PSA-Related Cables	170
3.6.10	Inventory of Equipment and Cables	171
3.6.11	Screening by Impact.	173
3.6.12	Screening by the Frequency	174
3.6.13	Detailed Analysis.	176
3.6.14	Analysis of the Results	176
3.6.15	Examples	177
3.7	Internal Flooding Analysis	178
3.7.1	Data Collection and Assessment	181
3.7.2	Definition of Flooding Areas.	181
3.7.3	Identification and Localization of Safety-Related Systems and Components	181
3.7.4	Identification of Flooding Sources, Barriers and Routes of Flooding	182
3.7.5	Determination of Components Vulnerabilities and Effects of Flooding	182
3.7.6	Screening by Impact.	183
3.7.7	Definition of Internal Flooding Scenarios	184
3.7.8	Screening on the Basis of Core Damage Frequency . . .	184
3.7.9	Detailed Analysis.	185
3.7.10	Examples	187
3.8	External Events	188
3.8.1	Seismic Events	188
3.8.2	Aircraft Crash	200
3.8.3	Extreme Meteorological Conditions	201
3.8.4	Impact of the Neighbouring Industry and Other Events	203
3.8.5	Example	203

3.9	Results of Level 1 Full Power PSA Studies.	204
3.9.1	WWER440/V230 Reactors	204
3.9.2	WWER440/V213 Reactors	207
	References	209
4	Level 1 Low Power and Shutdown PSA	211
4.1	Plant Operating Modes and Plant Operational States	213
4.2	Initiating Events and Their Assignment to Plant Operational States	217
4.2.1	Grouping of Initiating Events	219
4.2.2	Assignment of Initiating Events to POS	220
4.2.3	Initiating Event Frequency Calculation	222
4.2.4	Examples	224
4.3	Screening Process	224
4.4	Accident Sequence Modelling	225
4.4.1	Examples	226
4.5	System Reliability Analysis.	229
4.5.1	Examples	229
4.6	Data Analysis	230
4.6.1	Examples	231
4.7	Human Reliability Analysis.	232
4.7.1	Examples	233
4.8	Internal Fire	234
4.8.1	Screening by CCDP	236
4.8.2	Screening by CDF	237
4.8.3	Detailed Analysis.	238
4.8.4	Analysis of the Results	238
4.8.5	Examples	240
4.9	Internal Flooding	242
4.10	External Events	242
4.11	Shutdown Risk of Core Damage	243
4.11.1	WWER440/V230 Plants	243
4.11.2	WWER440/V213 Plants	243
	References	247
5	Level 2 PSA.	249
5.1	Characteristic Processes of Severe Accident	251
5.2	Interfacing of Level 1 and 2 PSA	255
5.2.1	Plant Damage States.	256
5.2.2	Grouping Using the Plant Operational States.	259
5.2.3	Extended Event Trees.	259
5.2.4	Examples	259
5.3	Accident Progression Analysis.	261

5.4	Confinement Event Trees	263
5.4.1	Combustion of Hydrogen	264
5.4.2	Overpressurization of the Confinement by Steam Generation	265
5.4.3	Loss of Cavity Integrity due to High Pressure at Vessel Failure	266
5.4.4	Loss of Cavity Integrity due to Long-term Corium Attack	269
5.4.5	Failure of Confinement due to Underpressure	270
5.4.6	Isolation Failure	271
5.4.7	Steam Explosion inside RPV and in Reactor Cavity	271
5.4.8	Examples	272
5.5	Release Categories	280
5.5.1	Integration of Confinement Failure Mode to Release Categories	280
5.5.2	Integration of the Extent of Fuel Damage to Release Categories	281
5.5.3	Integration Spray System Operation Effects to Release Categories	282
5.5.4	Integration of Time to Core Damage and Vessel Failure to Release Categories	282
5.5.5	Integration of Plant Operating Modes to Release Categories	283
5.5.6	The Release Categories	283
5.6	Source Term Characterization	284
5.6.1	Source Term for the WWER440 Reactor	287
5.6.2	Large Early Release	289
5.7	Results of Level 2 PSA	289
5.7.1	Examples	290
	References	297
6	PSA Applications	299
6.1	Living PSA	299
6.2	Use of PSA to Support Plant Upgrading	299
6.3	Use of PSA to Support Plant Operation	300
6.4	Use of PSA in the Area of Accident Mitigation	301
6.5	Use of PSA by Regulatory Authorities	301
6.6	Examples	302
6.6.1	Outage Risk Management	302
6.6.2	Screen for the Operator	305
	References	305

Probabilistic Safety Assessment of WWER440 Reactors
Prediction, Quantification and Management of the Risk
KOVACS, Z.

2014, XVIII, 306 p. 117 illus., 30 illus. in color.,
Hardcover

ISBN: 978-3-319-08547-0
