

Contents

1	Introduction, Motivation, and Background	1
1.1	Models for Geometric Control Systems: Pros and Cons	2
1.1.1	Family of Vector Field Models	2
1.1.2	Models with Control as a Parameter	3
1.1.3	Fibred Manifold Models	7
1.1.4	Differential Inclusion Models	8
1.1.5	The “Behavioural” Approach	9
1.2	An Introduction to Tautological Control Systems	9
1.2.1	Attributes of a Modelling Framework for Geometric Control Systems	10
1.2.2	The “Essentials” of Tautological Control Theory	10
1.3	An Outline of the Monograph	13
1.4	Notation, Conventions, and Background	14
	References	17
2	Topologies for Spaces of Vector Fields	21
2.1	An Overview of Locally Convex Topologies for Vector Spaces	21
2.1.1	Motivation	21
2.1.2	Families of Seminorms and Topologies Defined by These	22
2.2	Seminorms for Locally Convex Spaces of Vector Fields	24
2.2.1	Fibre Norms for Jet Bundles	24
2.2.2	Seminorms for Spaces of Smooth Vector Fields	26
2.2.3	Seminorms for Spaces of Finitely Differentiable Vector Fields	26
2.2.4	Seminorms for Spaces of Lipschitz Vector Fields	27
2.2.5	Seminorms for Spaces of Holomorphic Vector Fields	28
2.2.6	Seminorms for Spaces of Real Analytic Vector Fields	28
2.2.7	Summary and Notation	29
	References	30

3	Time-Varying Vector Fields and Control Systems	31
3.1	Time-Varying Vector Fields	32
3.1.1	Time-Varying Smooth Vector Fields	32
3.1.2	Time-Varying Finitely Differentiable and Lipschitz Vector Fields	33
3.1.3	Time-Varying Holomorphic Vector Fields	34
3.1.4	Time-Varying Real Analytic Vector Fields	35
3.1.5	Topological Characterisations of Spaces of Time-Varying Vector Fields	37
3.1.6	Mixing Regularity Hypotheses	38
3.2	Parameterised Vector Fields	39
3.2.1	The Smooth Case	39
3.2.2	The Finitely Differentiable or Lipschitz Case	40
3.2.3	The Holomorphic Case	40
3.2.4	The Real Analytic Case	41
3.2.5	Topological Characterisations of Parameterised Vector Fields	43
3.2.6	Mixing Regularity Hypotheses	43
3.3	Control Systems	43
3.3.1	Control Systems with Locally Essentially Bounded Controls	43
3.3.2	Control Systems with Locally Integrable Controls	44
3.3.3	Differential Inclusions	46
	References	48
4	Presheaves and Sheaves of Sets of Vector Fields	49
4.1	Definitions and Examples	49
4.2	Sheafification	53
4.3	The Étale Space	55
4.4	Stalk Topologies	56
	References	61
5	Tautological Control Systems: Definitions and Fundamental Properties	63
5.1	Tautological Control Systems	63
5.2	Open-Loop Systems	68
5.3	Trajectories	73
5.4	Attributes that can be Given to Tautological Control Systems	76
5.5	Trajectory Correspondences with Other Sorts of Control Systems	82
5.6	The Category of Tautological Control Systems	90
	References	94

6	Étalé Systems	97
6.1	Sheaves of Time-Varying Vector Fields	98
6.2	An Alternative Description of Local Sections of Sheaves of Time-Varying Vector Fields	100
6.3	Étalé Open-Loop Systems and Open-Loop Subfamilies	104
6.4	Étalé Trajectories	105
	References	106
7	Ongoing and Future Work	107
7.1	Linearisation	107
7.2	Optimal Control Theory	109
7.3	Controllability	113
7.4	Feedback and Stabilisation Theory	115
7.5	The Category of Tautological Control Systems	116
	References	116
