

# Contents

<b>1</b>	<b>A Historical Account</b>	1
1.1	Catalan's <i>Note Extraite</i>	1
1.2	Particular Cases	3
1.3	Cassels' Relations	5
1.4	Analysis: Logarithmic Forms	5
1.5	Algebra: Cyclotomic Fields	7
1.6	Numerical Results	7
1.7	The Final Attack	8
<b>2</b>	<b>Even Exponents</b>	11
2.1	The Equation $x^p = y^2 + 1$	11
2.2	Units of Real Quadratic Rings	13
2.3	The Equation $x^2 - y^q = 1$ with $q \geq 5$	15
2.4	The Cubic Field $\mathbb{Q}(\sqrt[3]{2})$	19
2.5	The Equation $x^2 - y^3 = 1$	21
<b>3</b>	<b>Cassels' Relations</b>	27
3.1	Cassels' Divisibility Theorem and Cassels' Relations	27
3.2	Binomial Power Series	29
3.3	Proof of the Divisibility Theorem	31
3.4	Hyrö's Lower Bounds	34
<b>4</b>	<b>Cyclotomic Fields</b>	37
4.1	Degree and Galois Group	37
4.2	Integral Basis and Discriminant	39
4.3	Decomposition of Primes	41
4.4	Units	41
4.5	The Real Cyclotomic Field and the Class Group	42
4.6	Cyclotomic Extensions of Number Fields	44
4.7	General Cyclotomic Fields	45

<b>5</b>	<b>Dirichlet <math>L</math>-Series and Class Number Formulas</b>	49
5.1	Dirichlet Characters and $L$ -Series	49
5.2	Dedekind $\zeta$ -Function of the Cyclotomic Field	52
5.3	Calculating $L(1, \chi)$ for $\chi \neq 1$	56
5.4	Class Number Formulas	61
5.5	Composite Moduli	62
<b>6</b>	<b>Higher Divisibility Theorems</b>	65
6.1	The Most Important Lemma	65
6.2	Inkeri's Divisibility Theorem	66
6.3	A Deviation: Catalan's Problem with Exponent 3	69
6.4	The Group Ring	70
6.5	Stickelberger, Mihăilescu, and Wieferich	72
<b>7</b>	<b>Gauss Sums and Stickelberger's Theorem</b>	75
7.1	Stickelberger's Ideal and Stickelberger's Theorem	75
7.2	Gauss Sums	78
7.3	Multiplicative Combinations of Gauss Sums	81
7.4	Prime Decomposition of a Gauss Sum	83
7.5	Proof of Stickelberger's Theorem	86
7.6	Kummer's Basis	87
7.7	The Real and the Relative Part of Stickelberger's Ideal	90
7.8	Proof of Iwasawa's Class Number Formula	93
<b>8</b>	<b>Mihăilescu's Ideal</b>	97
8.1	Definitions and Main Theorems	97
8.2	The Algebraic Number $(x - \zeta)^\Theta$	100
8.3	The $q$ th Root of $(x - \zeta)^\Theta$	102
8.4	Proof of Theorem 8.2	104
8.5	Proof of Theorem 8.4	106
8.6	Application to Catalan's Problem I: Divisibility of the Class Number	109
8.7	Application to Catalan's Problem II: Mihăilescu's Ideal vs Stickelberger's Ideal	110
8.8	On the Real Part of Mihăilescu's Ideal	113
<b>9</b>	<b>The Real Part of Mihăilescu's Ideal</b>	117
9.1	The Main Theorem	117
9.2	Products of Binomial Power Series	119
9.3	Mihăilescu's Series $(1 + \xi T)^{\Theta/q}$	121
9.4	Proof of Theorem 9.2	125
<b>10</b>	<b>Cyclotomic Units</b>	129
10.1	The Circulant Determinant	129
10.2	Cyclotomic Units	132

<b>11 Selmer Group and Proof of Catalan's Conjecture</b>	135
11.1 Selmer Group	135
11.2 Selmer Group as Galois Module	138
11.3 Units as Galois Module	139
11.4 $q$ -Primary Cyclotomic Units	142
11.5 Proof of Theorem 11.5	143
<b>12 The Theorem of Thaine</b>	145
12.1 Introduction	145
12.2 Preparations	146
12.3 Proof of Theorem 12.2	150
12.4 Reduction of a Multiplicative Group Modulo a Prime Ideal	154
12.5 Reduction of a Multiplicative Group Modulo a Prime Number and Proof of Theorem 12.3	156
<b>13 Baker's Method and Tijdeman's Argument</b>	159
13.1 Introduction: Thue, Gelfond, and Baker	159
13.2 Heights in Finitely Generated Groups	163
13.3 Almost $n$ th Powers	165
13.4 Effective Analysis of Classical Diophantine Equations	167
13.5 The Theorem of Schinzel and Tijdeman and the Equation of Pillai	173
13.6 Tijdeman's Argument	176
<b>Appendix A: Number Fields</b>	183
A.1 Embeddings, Integral Bases, and Discriminant	183
A.2 Units, Regulator	184
A.3 Ideals, Factorization	184
A.4 Norm of an Ideal	185
A.5 Ideal Classes, the Class Group	185
A.6 Prime Ideals, Ramification	186
A.7 Galois Extensions	187
A.8 Valuations	188
A.9 Dedekind $\zeta$ -Function	190
A.10 Chebotarev Density Theorem	191
A.11 Hilbert Class Field	193
<b>Appendix B: Heights</b>	197
<b>Appendix C: Commutative Rings, Modules, and Semi-simplicity</b>	203
C.1 Cyclic Modules	203
C.2 Finitely Generated Modules	204
C.3 Semi-simple Modules	206
C.4 Semi-simple Rings	207
C.5 The "Dual" Module	210

<b>Appendix D: Group Rings and Characters</b> .....	213
D.1 The Weight Function and the Norm Element .....	213
D.2 Characters of a Finite Abelian Group.....	214
D.3 Conjugate Characters .....	216
D.4 Semi-simplicity of the Group Ring .....	217
D.5 Idempotents .....	219
<b>Appendix E: Reduction and Torsion of Finite <math>G</math>-Modules</b> .....	221
E.1 Telescopic Rings .....	221
E.2 Products of Telescopic Rings .....	222
E.3 Elementary Divisors and Finitely Generated Modules .....	224
E.4 Reduction and Torsion.....	225
<b>Appendix F: Radical Extensions</b> .....	227
F.1 Field Generated by a Single Root .....	227
F.2 Kummer's Theory .....	228
F.3 General Radical Extensions .....	230
F.4 Equivariant Kummer's Theory .....	231
<b>References</b> .....	235
<b>Author Index</b> .....	241
<b>Subject Index</b> .....	243

Cloud Computing and ROI

A New Framework for IT Strategy

Mohapatra, S.; Lokhande, L.

2014, XVII, 214 p. 65 illus., 50 illus. in color., Hardcover
