

# Contents

<b>1</b>	<b>Multidimensional Loss Models of Queueing Systems and Their Applications in Telecommunication Networks . . . . .</b>	<b>1</b>
1.1	Multi-flow Loss Models with Deterministic Access Schemes . . . .	1
1.2	Applications of Multi-flow Loss Models in Mono-service Cellular Networks . . . . .	11
1.2.1	Model with Guard Channels . . . . .	12
1.2.2	Model with Cutoff Scheme . . . . .	13
1.2.3	Model with Hybrid Access Scheme . . . . .	15
1.2.4	Selection of Optimal Values for Parameters of Hybrid Access Scheme . . . . .	20
1.3	Numerical Results . . . . .	23
1.4	Conclusion . . . . .	30
	References . . . . .	31
<b>2</b>	<b>Analytical Methods for Analysis of Integral Cellular Networks . . . .</b>	<b>35</b>
2.1	Model of Multi-rate Queue with Randomized Access Scheme . . .	36
2.1.1	Model of Integral Wireless Network with Multi-parametric Access Scheme . . . . .	42
2.1.2	Numerical Results . . . . .	47
2.2	Models of Integral Cellular Networks with Partition of Channels . . .	49
2.2.1	Model with Complete Partition . . . . .	50
2.2.2	Model with Virtual Partition . . . . .	54
2.2.3	Numerical Results . . . . .	56
2.3	Conclusion . . . . .	64
	References . . . . .	66
<b>3</b>	<b>Algorithmic Methods for Analysis of Mono-service Cellular Networks . . . . .</b>	<b>69</b>
3.1	Models of Mono-service Cellular Networks with Buffers . . . . .	69
3.1.1	Models with Buffers . . . . .	70
3.1.2	Models with Finite Buffers . . . . .	71

3.1.3	Models with Infinite Buffers . . . . .	78
3.1.4	Numerical Results . . . . .	81
3.2	Models with Retrial Calls . . . . .	88
3.2.1	Exact Method . . . . .	89
3.2.2	Approximate Method . . . . .	91
3.2.3	Numerical Results . . . . .	94
3.3	Conclusion . . . . .	96
	References . . . . .	97
<b>4</b>	<b>Algorithmic Methods for Analysis of Integral Cellular Networks . . . .</b>	<b>99</b>
4.1	Models with Buffering of Handover Non-Real-Time Calls . . . . .	100
4.1.1	Various Access Schemes to Channels . . . . .	100
4.1.2	Selection of Effective Values of Access Scheme Parameters . . . . .	110
4.1.3	Numerical Results . . . . .	113
4.2	Models with Buffering of Both New and Handover Non-Real-Time Calls . . . . .	122
4.2.1	Integrated Access Schemes to Channels and to Buffer . . . .	123
4.2.2	Numerical Results . . . . .	129
4.3	Conclusion . . . . .	138
	References . . . . .	140
<b>5</b>	<b>Priority Schemes in Packet Switching Networks . . . . .</b>	<b>141</b>
5.1	Space and Time Priorities in Switch Modeling . . . . .	141
5.2	Models of Switches with Typed Output Ports . . . . .	144
5.2.1	Space Priorities Based on Non-Push-Out Schemes . . . . .	145
5.2.2	Space Priorities Based on Push-Out Schemes . . . . .	150
5.2.3	Numerical Results . . . . .	153
5.3	Models of Switches with Common Output Ports . . . . .	161
5.3.1	Multiple Priorities Based on Non-Push-Out Scheme . . . . .	161
5.3.2	Multiple Priorities Based on Push-Out Scheme . . . . .	163
5.3.3	Numerical Results . . . . .	165
5.4	State-Dependent Jump Priorities . . . . .	170
5.4.1	Various Schemes to Determination of State-Dependent Jump Priorities . . . . .	170
5.4.2	Numerical Results . . . . .	177
5.5	Conclusion . . . . .	182
	References . . . . .	184

Multidimensional Queueing Models in  
Telecommunication Networks

Melikov, A.; Ponomarenko, L.

2014, XII, 190 p. 70 illus., Hardcover

ISBN: 978-3-319-08668-2
