

Contents

1	Geometry of Nonholonomic Systems	1
1.1	Introduction	1
1.2	Nonholonomic Systems and Sub-Riemannian Distances	3
1.3	Sub-Riemannian Manifolds	6
1.4	Controllability	8
	References	12
2	First-Order Theory	15
2.1	First-Order Approximations	15
2.1.1	Nonholonomic Orders	15
2.1.2	Privileged Coordinates	19
2.1.3	Nilpotent Approximation	26
2.2	Distance Estimates	29
2.2.1	Local Distance Estimates	29
2.2.2	Uniform Estimates	34
2.3	Application to Carnot-Carathéodory Spaces	37
2.3.1	Tangent Structure to Carnot-Carathéodory Spaces	37
2.3.2	Hausdorff Dimension	43
2.4	Desingularization	46
2.4.1	Lifting of a Nonholonomic System	46
2.4.2	Desingularization Procedure	50
	References	56
3	Nonholonomic Motion Planning	59
3.1	Nonholonomic Motion Planning	59
3.2	Nilpotent Systems	62
3.2.1	The Case of Chained Systems	63
3.2.2	Sinusoidal Controls	64
3.2.3	Other Methods for Nilpotent Systems	73

3.3	Method by Approximation	76
3.3.1	Steering by Approximation	76
3.3.2	Local Steering Method	77
3.3.3	Global Steering Method	81
3.3.4	A Complete Algorithm	84
3.4	Two Other Methods	85
3.4.1	Path Approximation	85
3.4.2	Continuation Method	87
3.5	An Overview of the Motion Planning Algorithms	89
	References	91
Appendix A: Composition of Flows of Vector Fields		93
Appendix B: The Different Systems of Privileged Coordinates		99

Control of Nonholonomic Systems: from
Sub-Riemannian Geometry to Motion Planning

Jean, F.

2014, X, 104 p. 1 illus. in color., Softcover
