

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Multistage Decision Models	1
1.2	Fundamentals of Decision Making	2
1.2.1	Stochastic Problem Formulation	3
1.2.2	From Single-Stage to Multistage Decision Problems	7
1.3	Multistage Stochastic Optimization Versus Dynamic Optimization	21
1.4	Scenario Trees and Nested Distributions	23
1.4.1	Nested Distributions	29
1.4.2	Equivalence and Minimality	33
1.4.3	Convex Structures for Scenario Models	37
<b>2</b>	<b>The Nested Distance</b>	41
2.1	Distances of Probability Measures	42
2.1.1	Semi-Distances Generated by a Class of Test Functions	42
2.2	The Wasserstein Distance	46
2.3	Elementary Properties of the Wasserstein Distance	51
2.3.1	The Wasserstein Distance on the Real Line	53
2.4	Alternative Distances as Basis for the Wasserstein Distance	55
2.4.1	The Role of the Distance on the Underlying Space	55
2.4.2	Transformation of the Axis, and Fortet–Mourier Distances	55
2.5	Estimates Involving the Wasserstein Distance	58
2.6	Approximations in the Wasserstein Metric	62
2.7	The Wasserstein Distance in a Discrete Framework	63
2.8	Duality for the Wasserstein Metric	65
2.9	Continuity of the Dual Variables, and the Kantorovich–Rubinstein Theorem	69

2.10	Multistage Generalization: The Nested Distance .....	71
2.10.1	The Inherited Distance .....	71
2.10.2	The Nested Distance .....	74
2.10.3	The Nested Distance for Trees .....	79
2.11	Dual Representation of the Nested Distance .....	88
2.11.1	Martingale Representation of the Nested Distance .....	91
<b>3</b>	<b>Risk and Utility Functionals .....</b>	<b>95</b>
3.1	Single-Period Risk and Utility Functionals .....	95
3.2	Examples of Risk and Utility Functionals .....	97
3.3	Dual Representation of Risk Functionals .....	103
3.3.1	Kusuoka's Representation .....	103
3.3.2	The Dual Representation .....	105
3.4	An Alternative Description of Distortion Risk Functionals .....	110
3.5	The Impact of the Probability Measure on Risk Functionals .....	114
3.5.1	Compound Concavity and Convex-Concavity .....	114
3.5.2	Continuity with Respect to the Probability Measure .....	117
3.6	Conditional Risk Functionals .....	119
3.6.1	Properties of Conditional Risk Functionals .....	122
<b>4</b>	<b>From Data to Models .....</b>	<b>125</b>
4.1	Approximations of Single-Period Probability Distributions .....	126
4.1.1	Approximation Quality of the Monte Carlo Generation Method .....	127
4.1.2	Quasi-Monte Carlo Approximations .....	130
4.1.3	Optimal and Nearly Optimal Single-Period Discretizations .....	132
4.1.4	The Stochastic Approximation Algorithms for Multidimensional Quantization .....	142
4.1.5	Asymptotic Distribution of Optimal Quantizers .....	145
4.2	Approximations of Multiperiod Distributions .....	149
4.3	Construction of Scenario Trees .....	154
4.3.1	Distance Calculation .....	155
4.3.2	The Construction of Large Trees .....	157
4.4	Scenario Tree Reduction .....	163
4.5	Improvement of Approximating Trees .....	166
4.5.1	Improvement of the Probability Measure .....	167
4.5.2	Improvement of the Paths .....	168
4.6	An Alternative View on Approximations .....	172
<b>5</b>	<b>Time Consistency .....</b>	<b>175</b>
5.1	Time Consistency in Stochastic Decision Problems .....	176
5.2	Time Consistent Risk Functionals .....	179

5.3	Time Consistency and Decomposition .....	187
5.3.1	Composition of Risk Functionals .....	187
5.3.2	Multistage Decomposition of Risk Functionals: The Decomposition Theorem .....	188
5.4	Martingale Formulations of Time Inconsistent Stochastic Programs .....	196
5.4.1	Verification Theorems .....	199
5.4.2	An Algorithm for Sequential Improvement.....	202
5.4.3	Numerical Experiments.....	203
5.5	Dualization of Nonanticipativity Constraints .....	205
<b>6</b>	<b>Approximations and Bounds .....</b>	<b>209</b>
6.1	Two-Stage Problems, and Approximation in the Wasserstein Distance .....	209
6.2	Approximation in the Nested Distance Sense .....	211
6.3	Bounds .....	218
6.3.1	Lower Bounds by Changing the Probability Measure .....	219
6.3.2	Lower Bounds for Replacing the Scenario Process by Its Expectation.....	225
6.3.3	Bounds for Changing the Filtration .....	227
6.3.4	Upper Bounds by Inserting (Sub)Solutions.....	227
6.4	Martingale Properties.....	228
<b>7</b>	<b>The Problem of Ambiguity in Stochastic Optimization.....</b>	<b>229</b>
7.1	Single- or Two-Stage Models: Wasserstein Balls .....	234
7.2	Solution Methods for the Single- or Two-Stage Case.....	237
7.3	The Multistage Case .....	238
7.3.1	A Minimax Theorem.....	241
7.3.2	Ambiguity Sets Defined by Nested Transportation Kernels.....	245
7.3.3	Algorithmic Solution .....	247
7.4	Example: A Multiperiod Production / Inventory Control Problem .....	249
7.4.1	Mathematical Modeling Summary .....	251
7.4.2	Computational Results.....	252
<b>8</b>	<b>Examples .....</b>	<b>257</b>
8.1	Thermal Electricity Production .....	257
8.2	Hydro Electricity Production.....	261
8.3	Budget Management for Risk-Prone Countries .....	270
<b>A</b>	<b>Risk Functionals: Definitions and Notations .....</b>	<b>275</b>
A.1	Multiperiod Risk Functionals .....	279
A.2	Information Monotonicity .....	280

<b>B</b>	<b>Minimax Theorems</b> .....	283
<b>C</b>	<b>Comparison of Weighted Norms</b> .....	287
<b>D</b>	<b>The Canonical Construction for Nested Distributions</b> .....	289
	<b>Bibliography</b> .....	291
	<b>Index</b> .....	299

Multistage Stochastic Optimization

Pflug, G.C.; Pichler, A.

2014, XIV, 301 p. 81 illus., Hardcover

ISBN: 978-3-319-08842-6
