

Contents

1	Fourier Analysis of Functions	1
1.1	Fourier Theory in L^1	1
1.1.1	Fourier Transform and Fourier Series	1
1.1.2	Convergence Theory	23
1.1.3	The Poisson Summation Formula	37
1.2	Z-Transforms	45
1.2.1	Fourier Sums	45
1.2.2	Transfer Functions	49
1.3	Hilbert Spaces	55
1.3.1	Isometric Extension	55
1.3.2	Orthogonal Projection	61
1.3.3	Orthonormal Expansions	70
1.4	Fourier Theory in L^2	73
1.4.1	Fourier Transform in L^2	73
1.4.2	Fourier Series in L^2_{loc}	81
1.5	Exercises	86
2	Fourier Theory of Probability Distributions	91
2.1	Characteristic Functions	91
2.1.1	Basic Facts	91
2.1.2	Inversion Formula	94
2.1.3	Gaussian Vectors	98
2.2	Convergence in Distribution	103
2.2.1	Paul Lévy's Theorem	103
2.2.2	Bochner's Theorem	108
2.3	Weak Convergence of Finite Measures	111
2.3.1	Helly's Theorem	111
2.3.2	Proof of Paul Lévy's Theorem	113
2.4	Exercises	116

3	Fourier Analysis of Stochastic Processes	119
3.1	Review of Stochastic Processes	119
3.1.1	Distribution of a Stochastic Process	119
3.1.2	Measurability and Sample Path Properties	131
3.2	Gaussian Processes	134
3.2.1	Gaussian Subspaces	134
3.2.2	Brownian Motion	136
3.2.3	The Wiener–Doob Integral	137
3.3	The Power Spectral Measure	141
3.3.1	The Covariance Function	141
3.3.2	Fourier Representation of the Covariance	144
3.3.3	Filtering and White Noise	147
3.3.4	Long-range Dependence and Self-similarity	153
3.4	Fourier Analysis of the Trajectories	157
3.4.1	The Cramér–Khinchin Decomposition	157
3.4.2	Linear Operations	166
3.4.3	Multivariate wss Stochastic Processes	169
3.5	Exercises	175
4	Fourier Analysis of Time Series	181
4.1	Power Spectral Measure	181
4.1.1	Herglotz’s Theorem	181
4.1.2	The Periodogram	193
4.1.3	The Cramér–Khinchin Decomposition	196
4.2	ARMA Processes	201
4.2.1	Prediction Theory	201
4.2.2	Regular ARMA Processes	208
4.2.3	Long-Range Dependence	214
4.3	General Prediction Theory	224
4.3.1	Wold’s Decomposition	224
4.3.2	Innovations Sequence	226
4.3.3	Kolmogorov’s Regularity Criterion	230
4.4	Realization Theory for Spectral Analysis	233
4.4.1	The Levinson–Durbin Algorithm	233
4.4.2	Maximum Entropy Realization	244
4.4.3	Pisarenko’s Realization	247
4.5	Exercises	255
5	Power Spectra of Point Processes	259
5.1	Review of Point Processes	260
5.1.1	The Distribution of a Point Process	260
5.1.2	Poisson Processes	266
5.1.3	Renewal Processes	281

5.2	Power Spectral Measure	289
5.2.1	Covariance Measure and Bartlett Spectrum.	289
5.2.2	Transformed Point Processes.	307
5.2.3	Pulse Amplitude Modulation.	317
5.3	Random Sampling	322
5.3.1	Spectral Measure of the Sample Brush.	322
5.3.2	Reconstruction from Samples	328
5.4	Exercises	331
Appendix A.		337
