

Contents

1	Working Definitions	1
1.1	Remote Sensing and GIS	1
1.2	Remote Sensing and Ecology: Shared Terminology	4
1.2.1	Resolution	4
1.2.2	Scale	5
1.3	Community and Landscape Ecology	7
1.3.1	Hierarchical Analytical Scales	8
1.3.2	Habitat	8
1.3.3	Biotope	10
1.3.4	Habitat in GIS	11
1.3.5	Guild and Assemblage	16
1.3.6	Community	17
2	Image Resolution: Habitat Selection Scale in a Remote Sensing Context	19
2.1	Scale of Habitat Selection	19
2.2	Image Resolution and Minimum Mapping Unit Size	20
2.2.1	What About Mapping Scale?	21
2.3	Landscape Component/Land-cover Classification	22
2.4	Image Resolution and Interpretability	24
2.5	Matching Image Resolution to the Scale of Species Function	26
2.5.1	Domains of Scale	26
2.5.2	Less Arbitrary Selection of Image Resolution	28
2.5.3	Edges and Ecotones: Resolution Effects on Interpretation of Habitat Association	29
2.6	Landsat Versus Higher Resolution Imagery	32
2.7	Gaps in Information: Scale Disconnects Between Local and Landscape-scale Metrics	34
2.8	Multi-scale Analyses	35
2.9	Conclusions	36

3 Explanatory Variables	39
3.1 Ground-Based Variables	40
3.2 Landscape Metrics: Size, Configuration, and Context	41
3.2.1 Proportions and Indices: Relative Versus Absolute Measures	42
3.2.2 Size	48
3.2.3 Considering Energetics: The Basis of Optimal Patch Shape	48
3.2.4 Configuration	54
3.2.5 Context	55
4 Landscape Sampling Areas Versus Actual Location of Taxonomic Survey	57
4.1 Point-Count Assumptions and Inferences	57
4.1.1 Local Scale	57
4.1.2 Biotope and Landscape Scales	60
4.2 Matching Metrics to Organism Location in the Landscape	65
4.3 Controlling for One or More Variables	68
5 Refining Habitat Specificity	69
5.1 How Do We Increase the Likelihood of Including Potentially Useful Explanatory Variables?	70
5.1.1 Identifying a Statistically Acceptable Number of Ecologically Relevant Explanatory Variables. Can We Avoid Bias?	70
5.1.2 Matching Both Spatial and Temporal Scales of Explanatory Variables to the Organizational Level of the Analysis	72
5.2 Are All Solid and Edge Landscape Components or Component Combinations (i.e., Patch Types) Equally Important to Measure?	73
5.2.1 The Case of Edge Versus Ecotone	74
5.3 How Much Lumping or Splitting of Types Is Appropriate?	76
5.4 Spatial Autocorrelation	78
6 An Example Using High-Resolution Imagery and Taxon-Specific Variables	81
6.1 Summary	97
6.2 Recommendations	99
Appendix A	103
Appendix B	105
Appendix C	109

Contents	ix
Appendix D	111
Appendix E	113
