- 1 Software Engineering for Aerospace: State of the Art 1**
 - 1.1 Introduction: The Specifics of Aerospace Industry 1
 - 1.1.1 Emphasis on Safety 2
 - 1.1.2 Standardization 2
 - 1.1.3 Complexity. 3
 - 1.1.4 Diversity of Platforms 3
 - 1.2 Software Engineering Process for Aerospace 3
 - 1.2.1 Requirements Engineering and Modeling 5
 - 1.2.2 Managing Safety and Risk 8
 - 1.2.3 Dealing with Complexity 9
 - 1.2.4 Design 10
 - 1.2.5 Implementation 12
 - 1.2.6 Testing, Verification and Validation. 13
 - 1.3 Methods, Techniques and Architecture Approaches
for Aerospace 13
 - 1.3.1 Formal Methods 13
 - 1.3.2 Software Verification and Validation 14
 - 1.3.3 SOA 15
 - 1.3.4 Multi-agent Systems 16
 - 1.4 Autonomous and Autonomic Aerospace Systems 22
 - 1.4.1 Autonomy Versus Automation 22
 - 1.4.2 Autonomic Computing 23
 - 1.4.3 Engineering Resilient Systems with Adaptability 27
 - 1.4.4 Integrated Vehicle Health Management 28
 - 1.4.5 UAV 29
 - 1.4.6 Formal Methods for Autonomic Computing 32
 - 1.4.7 Software Engineering Aspects, Conclusions
and Recommendations 33
 - 1.5 Approaches to Requirements Engineering for Autonomous
Systems 35

1.5.1	Goal-Oriented Requirements Engineering	36
1.5.2	The ASSL Approach to Requirements Engineering for Autonomic Systems	36
1.5.3	Requirements for Autonomous Unmanned Air Systems	38
1.6	Summary	39
	References	41
2	Handling Autonomy Requirements for ESA Systems	47
2.1	Introduction	47
2.1.1	Autonomy and Automation.	49
2.1.2	Levels of Autonomy for ESA Missions	49
2.2	Requirements Engineering, Specification Models and Formal Methods for Aerospace.	50
2.2.1	Requirements Specification and Modeling	50
2.2.2	Requirements Engineering for Autonomous Systems	51
2.2.3	Generic Autonomy Requirements	51
2.3	Generic Autonomy Requirements for Space Missions.	55
2.3.1	Space Mission Requirements Analysis	55
2.3.2	Earth-Orbiting Missions	57
2.3.3	Interplanetary Missions	64
2.4	Controller Architectures for Robotic Systems	70
2.4.1	Architectural Issues Related to Autonomy	70
2.4.2	Controller Architectures for Robotic Systems	71
2.5	Formal Methods for ARE	74
2.5.1	Goal-Oriented Requirements Engineering	75
2.5.2	Awareness Modeling	78
2.5.3	ASSL	80
2.5.4	KnowLang	83
2.6	Case Studies: Specifying Autonomy Requirements.	90
2.6.1	Handling Autonomy Requirements with KnowLang.	90
2.6.2	Specifying Autonomy Requirements for Voyager with ASSL	94
2.7	Summary	99
	References	100
3	Autonomy Requirements Engineering	105
3.1	Introduction	105
3.2	ARE: Autonomy Requirements Engineering	106
3.2.1	GAR: Generic Autonomy Requirements.	107
3.2.2	GORE for ARE	108
3.2.3	Understanding ARE.	108
3.2.4	From Goals to Self-* Objectives	110
3.2.5	Recording Self-* Objectives	118

3.2.6	Variability Points and Degree of Goals Satisfaction in ARE	121
3.3	The Spacecraft in BepiColombo Mission	126
3.3.1	Planetary Orbiter	127
3.3.2	Mercury Magnetospheric Orbiter	128
3.3.3	Composite Module (MPO and MMO)	130
3.3.4	Transfer Module	130
3.3.5	Carrier Spacecraft	130
3.4	GORE for BepiColombo	131
3.4.1	Mission Objectives	131
3.4.2	Environmental Constraints for BepiColombo	138
3.5	Autonomy Requirements for BepiColombo	139
3.5.1	Applying GAR for Space Missions	140
3.5.2	Goals Model for BepiColombo with Self-* Objectives	146
3.5.3	Specifying the Autonomy Requirements with KnowLang	155
3.6	Summary	170
	References	170
4	Verification and Validation of Autonomy Requirements	173
4.1	Introduction	173
4.2	Background	174
4.3	AdaptiV	175
4.3.1	Model Checking	176
4.3.2	Stabilization Science	178
4.3.3	State Space Reduction	180
4.3.4	High Performance Computing	180
4.3.5	Compositional Verification	181
4.3.6	Operational Monitors	182
4.3.7	System Inputs	183
4.4	Summary	183
	References	184
5	Summary and Future Work	185
	Appendix A: Requirements for Cognitive Capabilities of UAS	189
	Appendix B: ASSL Specification of Voyager Image-Processing Behavior	193
	Appendix C: BepiColombo Autonomy Requirements Specification with KnowLang	229
	Index	247

Autonomy Requirements Engineering for Space
Missions

Vassev, E.; Hinchey, M.

2014, XVII, 250 p. 38 illus., Hardcover

ISBN: 978-3-319-09815-9
