

Contents

1	A Brief History of Ceramic Innovation	1
1.1	Innovation Resulting from Natural Knowledge	1
1.2	Innovation Based on Geological and Mineralogical Knowledge	5
1.3	Innovation Based on Chemistry, Physics and Technical Sciences	8
2	The Tradition Continued	19
2.1	The Clay Tradition	19
2.2	The Silica Tradition	23
2.3	The Lime Tradition	29
2.4	The Refractory Tradition	32
3	Ceramics to Overcome Brittleness	39
3.1	Mechanical Properties of Ceramic Materials	39
3.2	Mechanical Properties of Polycrystals and Particulate Composites	44
3.3	Use of Ceramic Materials in Fibre-Reinforced Polymer Composites	48
3.4	Functionally Graded Composites	49
4	Voides Are Important	51
4.1	Cellular Materials	51
4.2	Foam Materials	55
4.3	Molecular Sieves	56
5	Unusual Ceramic Dielectrics and Conductors	59
5.1	Dielectrics	59
5.2	Unusual Conductors	64

6	Materials Versus Light	67
6.1	Exchange of Energy with Remote Electromagnetic Fields	67
6.2	Non-transparent Materials	68
6.3	Transparent Materials	73
7	Imitating and Supporting Nature	79
7.1	Smart Materials and Intelligent Systems	79
7.2	Self-Healing Materials	83
7.3	Ceramic Biomaterials and Tissue Engineering	84
	Further Readings	87
	Index	89

An Introduction to Ceramics

Pampuch, R.

2014, VIII, 91 p. 78 illus., 4 illus. in color., Hardcover

ISBN: 978-3-319-10409-6
