1	Introduction	1
1.1	Introductory Example	1
1.1.1	Likelihood Approach	2
1.1.2	Bayesian Approach	3
1.1.3	Frequentist Approach	4
1.1.4	Comments on the Example	5
1.1.5	Choice of k and α	6
1.2	What Is Statistics?	7
1.2.1	General Setup	8
1.2.2	Scope of Statistical Inference	9
2	The Statistical Approach	11
2.1	The Setup	11
2.2	Approaches to Statistical Inference	11
2.3	Types of Statistical Inference	11
2.4	Statistics and Combinants	12
2.4.1	Statistics and Sampling Distributions	12
2.4.2	Combinants	12
2.4.3	Frequentist Inference	13
2.4.4	Bayesian Inference	13
2.4.5	Likelihood Inference	14
2.5	Exercises	14
3	Estimation	17
3.1	Frequentist Concepts	17
3.1.1	Bias, Unbiasedness, and Standard Errors	18
3.1.2	Consistency	18
3.1.3	Mean Square Error	20
3.1.4	Asymptotic Distributions	20
3.1.5	Efficiency	21
3.1.6	Equivariance	23

3.2	Bayesian and Likelihood Paradigms	23
3.3	Exercises	24
4	Interval Estimation	27
4.1	The Problem.....	27
4.2	Frequentist Approach	27
4.2.1	Importance of the Long Run	28
4.2.2	Application to the Normal Distribution	29
4.3	Pivots	31
4.4	Likelihood Intervals.....	32
4.5	Bayesian Approach	33
4.6	Objective Bayes	35
4.7	Comparing the Intervals	35
4.8	Interval Estimation Example	36
4.9	Exercises	37
5	Hypothesis Testing	41
5.1	Law of Likelihood	41
5.2	Neyman-Pearson Theory	42
5.2.1	Introduction	42
5.2.2	Neyman-Pearson Lemma	44
5.2.3	Using the Neyman-Pearson Lemma	46
5.2.4	Uniformly Most Powerful Tests.....	48
5.2.5	A Complication	48
5.2.6	Comments and Examples.....	48
5.2.7	A Different Criterion	50
5.2.8	Inductive Behavior.....	51
5.2.9	Still Another Criterion	51
5.3	p-Values	52
5.4	Duality of Confidence Intervals and Tests	55
5.5	Composite Hypotheses	56
5.5.1	One-Way Analysis of Variance.....	57
5.6	The Multiple Testing Problem.....	60
5.7	Exercises	62
6	Standard Practice of Statistics	63
6.1	Introduction	63
6.2	Frequentist Statistical Procedures	63
6.2.1	Estimation	63
6.2.2	Confidence Intervals	64
6.2.3	Hypothesis Testing.....	64
6.2.4	Significance Tests	65
7	Maximum Likelihood: Basic Results	67
7.1	Basic Properties	67
7.2	Consistency of Maximum Likelihood	69
7.3	General Results on the Score Function	71

7.4	General Maximum Likelihood	72
7.5	Cramer-Rao Inequality	75
7.6	Summary Properties of Maximum Likelihood	76
7.7	Multiparameter Case	77
7.8	Maximum Likelihood in the Multivariate Normal	78
7.9	Multinomial	80
8	Linear Models	85
8.1	Introduction	85
8.2	Basic Results	85
8.2.1	The Fitted Values and the Residuals	87
8.3	The Basic “Regression” Model	89
8.3.1	Adding Covariates	91
8.3.2	Interpretation of Regression Coefficients	92
8.3.3	Added Sum of Squares	93
8.3.4	Identity of Regression Coefficients	94
8.3.5	Likelihood and Bayesian Results	94
8.4	Interpretation of the Coefficients	95
8.5	Factors as Covariates	95
8.6	Exercises	97
9	Other Estimation Methods	101
9.1	Estimation Using Empirical Distributions	101
9.1.1	Empirical Distribution Functions	101
9.1.2	Statistical Functionals	103
9.1.3	Linear Statistical Functionals	103
9.1.4	Quantiles	104
9.1.5	Confidence Intervals for Quantiles	105
9.2	Method of Moments	106
9.2.1	Technical Details of the Method of Moments	107
9.2.2	Application to the Normal Distribution	109
9.3	Estimating Functions	113
9.3.1	General Linear Model	113
9.3.2	Maximum Likelihood	113
9.3.3	Method of Moments	114
9.3.4	Generalized Linear Models	114
9.3.5	Quasi-Likelihood	115
9.3.6	Generalized Estimating Equations	115
9.4	Generalized Method of Moments	116
9.5	The Bootstrap	117
9.5.1	Basic Ideas	117
9.5.2	Simulation Background	118
9.5.3	Variance Estimation Using the Bootstrap	119
9.6	Confidence Intervals Using the Bootstrap	120
9.6.1	Normal Interval	120
9.6.2	Pivotal Interval	121

9.6.3	Percentile Interval	122
9.6.4	Parametric Version	122
9.6.5	Dangers of the Bootstrap	123
9.6.6	The Number of Possible Bootstrap Samples	123
10	Decision Theory	125
10.1	Introduction	125
10.1.1	Actions, Losses, and Risks	125
10.2	Admissibility	127
10.3	Bayes Risk and Bayes Rules	127
10.4	Examples of Bayes Rules	128
10.5	Stein's Result	130
10.6	Exercises	132
11	Sufficiency	133
11.1	Families of Distributions	133
11.1.1	Introduction to Sufficiency	134
11.1.2	Rationale for Sufficiency	136
11.1.3	Factorization Criterion	137
11.1.4	Sketch of Proof of the Factorization Criterion	139
11.1.5	Properties of Sufficient Statistics	140
11.1.6	Minimal Sufficient Statistics	140
11.2	Importance of Sufficient Statistics in Inference	144
11.2.1	Frequentist Statistics	144
11.2.2	Bayesian Inference	144
11.2.3	Likelihood Inference	145
11.3	Alternative Proof of Factorization Theorem	145
11.4	Exercises	146
12	Conditionality	147
12.1	Ancillarity	147
12.2	Problems with Conditioning	148
13	Statistical Principles	151
13.1	Introduction	151
13.1.1	Birnbaum's Formulation	152
13.1.2	Framework and Notation	153
13.1.3	Mathematical Equivalence	154
13.1.4	Irrelevant Noise	155
13.2	Likelihood Principle	155
13.3	Equivalence of Likelihood and Irrelevant Noise Plus Mathematical Equivalence	156
13.4	Sufficiency, Conditionality, and Likelihood Principles	158
13.5	Fundamental Result	159
13.6	Stopping Rules	161
13.6.1	Comments	162
13.6.2	Jeffreys/Lindley Paradox	162

13.6.3	Randomization	163
13.6.4	Permutation or Randomization Tests	164
14	Bayesian Inference	167
14.1	Frequentist vs Bayesian	167
14.2	The Bayesian Model for Inference	168
14.3	Why Bayesian? Exchangeability	168
14.4	Stable Estimation	174
14.5	Bayesian Consistency	174
14.6	Relation to Maximum Likelihood	175
14.7	Priors	176
14.7.1	Different Types of Priors	177
14.7.2	Vague Priors	178
15	Bayesian Statistics: Computation	181
15.1	Computation	181
15.1.1	Monte Carlo Integration	181
15.1.2	Importance Sampling	182
15.1.3	Markov Chain Monte Carlo	183
15.1.4	The Gibbs Sampler	183
15.1.5	Software	184
16	Bayesian Inference: Miscellaneous	187
16.1	Bayesian Updating	187
16.2	Bayesian Prediction	187
16.3	Stopping Rules in Bayesian Inference	190
16.4	Nuisance Parameters	195
16.5	Summing Up	195
17	Pure Likelihood Methods	197
17.1	Introduction	197
17.2	Misleading Statistical Evidence	198
17.2.1	Weak Statistical Evidence	201
17.2.2	Sample Size	204
17.3	Birnbaum's Confidence Concept	207
17.4	Combining Evidence	207
17.5	Exercises	209
18	Pure Likelihood Methods and Nuisance Parameters	211
18.1	Nuisance Parameters	211
18.1.1	Introduction	211
18.1.2	Neyman-Scott Problem	212
18.2	Elimination Methods	214
18.3	Evidence in the Presence of Nuisance Parameters	214
18.3.1	Orthogonal Parameters	215
18.3.2	Orthogonal Reparametrizations	217
18.4	Varieties of Likelihood	219

18.5	Information Loss	221
18.6	Marginal Likelihood	221
18.7	Conditional Likelihood	222
18.7.1	Estimated Likelihoods	223
18.8	Profile Likelihood	225
18.8.1	Introduction	225
18.8.2	Misleading Evidence Using Profile Likelihoods	227
18.8.3	General Linear Model Likelihood Functions	230
18.8.4	Using Profile Likelihoods	230
18.8.5	Profile Likelihoods for Unknown Variance	232
18.9	Computation of Profile Likelihoods	234
18.10	Summary	235
19	Other Inference Methods and Concepts	237
19.1	Fiducial Probability and Inference	237
19.1.1	Good's Example	239
19.1.2	Edward's Example	241
19.2	Confidence Distributions	242
19.2.1	Bootstrap Connections	242
19.2.2	Likelihood Connections	243
19.2.3	Confidence Curves	243
19.3	P-Values Again	244
19.3.1	Sampling Distribution of P-Values	244
19.4	Severe Testing	246
19.5	Cornfield on Testing and Confidence Intervals	247
20	Finite Population Sampling	249
20.1	Introduction	249
20.2	Populations and Samples	249
20.3	Principal Types of Sampling Methods	250
20.4	Simple Random Sampling	251
20.5	Horvitz–Thompson Estimator	252
20.5.1	Basu's Elephant	255
20.5.2	An Unmentioned Assumption	256
20.6	Prediction Approach	257
20.6.1	Proof of the Prediction Result	258
20.7	Stratified Sampling	260
20.7.1	Basic Results	260
20.8	Cluster Sampling	261
20.9	Practical Considerations	263
20.9.1	Sampling Frame Problems	263
20.9.2	Nonresponse	263
20.9.3	Sampling Errors	263
20.9.4	Non-sampling Errors	264
20.10	Role of Finite Population Sampling in Modern Statistics	264

21	Appendix: Probability and Mathematical Concepts	265
21.1	Probability Models	265
21.1.1	Definitions	265
21.1.2	Properties of Probability	266
21.1.3	Continuity Properties of Probability Measures	266
21.1.4	Conditional Probability	266
21.1.5	Properties of Conditional Probability	267
21.1.6	Finite and Denumerable Sample Spaces	267
21.1.7	Independence	269
21.2	Random Variables and Probability Distributions	272
21.2.1	Measurable Functions	272
21.2.2	Random Variables: Definitions	272
21.2.3	Distribution Functions	272
21.2.4	Discrete Random Variables	273
21.2.5	Continuous Random Variables	274
21.2.6	Functions of Random Variables	276
21.3	Random Vectors	277
21.3.1	Definitions	277
21.3.2	Discrete and Continuous Random Vectors	278
21.3.3	Marginal Distributions	278
21.3.4	The Multinomial Distribution	279
21.3.5	Independence of Random Variables	280
21.3.6	Conditional Distributions	281
21.3.7	Functions of a Random Vector	281
21.3.8	The Multivariate Normal Distribution	283
21.4	Expected Values	284
21.4.1	Expected Value of a Random Variable	284
21.4.2	Distributions and Expected Values	286
21.4.3	Moments	286
21.4.4	Properties and Results on Expected Values and Moments	286
21.4.5	Other Functionals of a Distribution	287
21.4.6	Probability Generating Functions	287
21.4.7	Moment-Generating Functions	288
21.4.8	Cumulant Generating Functions and Cumulants	288
21.4.9	Expected Values of Functions of Random Vectors	289
21.4.10	Conditional Expectations and Variances	291
21.5	What Is Probability?	292
21.5.1	Frequency Interpretation	293
21.5.2	Belief Interpretations	294
21.5.3	Rational Belief Interpretation	296
21.5.4	Countable Additivity Assumption	297
21.5.5	Lindley's Wheel	298
21.5.6	Probability via Expectations	298
21.6	Final Comments	300

21.7	Introduction to Stochastic Processes	300
21.7.1	Introduction	300
21.7.2	Types of Stochastic Processes	301
21.7.3	Markov Processes	302
21.7.4	Markov Chains	304
21.8	Convergence of Sequences of Random Variables	309
21.8.1	Introduction	309
21.8.2	Basic Techniques	310
21.8.3	Convergence in Probability	310
21.8.4	Convergence in Distribution	312
21.8.5	Extension to Vectors	312
21.8.6	Results on Convergence in Probability and in Distribution	313
21.8.7	The Delta Method	314
21.9	Sets	315
21.9.1	Definitions	315
21.9.2	Properties of Set Operations	316
21.9.3	Indicator Functions	317
21.9.4	Counting and Combinatorics	317
21.10	σ -Algebras and Borel Sets	319
21.10.1	σ -Algebras	319
21.10.2	Borel σ -Algebras	319
21.10.3	Properties and Examples of Borel Sets	319
21.10.4	Measurable Functions	320
21.10.5	Borel Sets in n Dimensions	320
21.11	Background: Limits, o , and O Notation	320
21.11.1	Notation	320
21.11.2	Limits of Sequences	321
21.11.3	\liminf and \limsup	321
21.11.4	Sequences of Events	322
21.11.5	o , O Definitions and Results	323
21.11.6	Results and Special Cases	323
21.11.7	Extension to Functions	324
21.11.8	Extension to Vectors	324
21.11.9	Extension to Vector-Valued Functions	325
