Part I Basic Geometry

1	Introduction	3
1.1	What is Geometry	3
1.2	Contemporary Geometries in Modern Computer Times	5
1.2.1	Discrete Geometry	5
1.2.2	Digital Geometry	6
1.2.3	Computational Geometry and Numerical Geometry	6
1.3	Geometry and Topology in Image Processing and Computer Graphics	7
1.4	Problems and Concepts of Digital and Discrete Geometry	9
1.4.1	Some Developments in Digital Geometry	12
	References	13
2	Discrete Spaces: Graphs, Lattices, and Digital Spaces	17
2.1	Objects in Discrete Spaces	17
2.2	Graphs and Simple Graphs	18
2.2.1	Basic Concepts of Graphs	18
2.2.2	Special Graphs	20
2.3	Basic Topics and Results in Graph Theory	20
2.3.1	Graph Representation, Searching Graph, and Graph Coloring	21
2.3.2	The Minimum Spanning Tree	23
2.3.3	The Shortest Path*	23
2.3.4	Graph Homomorphism and Graph Isomorphism*	25
2.4	Lattice Graphs, Triangulated Space, and Grid Space	25
2.5	Basic Concepts of Digital Spaces	26
2.5.1	2D and 3D Digital Spaces	26
2.5.2	m D Digital Spaces*	28
2.5.3	Points, Line-cells, and Surface-cells in Digital Space	28
2.5.4	Points in Digital Space and Data in Real World	29

2.6	Characteristics of General Discrete Spaces	30
2.7	Historical Remarks on Digital Space	31
	References	33
3	Euclidean Space and Continuous Space	35
3.1	Euclidean Space and Properties	35
3.1.1	Euclidean Spaces	36
3.1.2	Definition of Metrics	38
3.1.3	Spheres and Distance on Spheres	38
3.1.4	Two Inequalities of Euclidean Space*	39
3.2	Functions on Euclidean Space	40
3.2.1	Geometric Transformation, Linear Transformation, and Matrix Algebra	41
3.3	Topological Spaces and Manifolds	43
3.4	Decomposition: From Continuous Space to Discrete Space	44
3.5	Remark	46
	References	46
 Part II Digital Curves, Surfaces, and Manifolds		
4	Digital Planar Geometry: Curves and Connected Regions	49
4.1	General Continuous Curves and Discrete Curves	49
4.2	Curves in Discrete Forms	50
4.3	Digital Curves in Σ_2	52
4.3.1	Digital Curve Representations	52
4.3.2	What is a Digital Point: A Vertex or a Pixel?	54
4.3.3	A Property of Parametric Digital Curves	54
4.4	Connectivity and Connected Components in Digital Plane	56
4.5	Applications of Connected Components: Image Segmentation	58
4.6	Constructing Digital Lines: Bresenham's Line Algorithm	59
4.7	Hole Counting of Images	61
4.8	Pick's Theorem and Minkowski's Theorem*	63
4.9	Remark	65
	References	65
5	Surfaces and Manifolds in Digital Space	67
5.1	Introduction to Surfaces and Digital Surfaces	67
5.2	Definitions of Digital Surfaces	68
5.2.1	Morgenthaler-Rosenfeld Definition of Digital Surfaces	69
5.2.2	Parallel-Moves and Chen-Zhang Definition of Digital Surfaces	72
5.3	The Classification of Digital Surface Points	74
5.3.1	Simple Surface Points and Regular Inner Surface Points ...	74
5.3.2	Isometric and Geometric Equivalence in 3D	75
5.3.3	The Theorem of the Classification	76

5.4	Digital Manifolds	78
5.4.1	k -Cells and Connectivity	78
5.4.2	Definition of Digital Manifolds	81
5.4.3	Properties of Digital Manifolds*	82
5.5	Historical Remarks: Analysis on General Digital Surfaces in 3D ..	85
	References	87
6	Algorithms for Digital Surfaces and Manifolds	89
6.1	What is an Algorithm?	89
6.1.1	Easy Problems and NP-hard Problems	90
6.1.2	Geometric Algorithms	91
6.2	Data Structures for Digital Data Sets	91
6.3	Algorithms for Decision and Tracking of Digital Surfaces	93
6.3.1	Algorithms for the Surface Decision Problem	93
6.3.2	Surface Tracking	96
6.4	Algorithms for Digital k -Manifolds	96
6.4.1	Data Structures of Digital k -Manifolds	97
6.4.2	Decision and Recognition Algorithms	99
6.5	Algorithms for the Orientability of Digital Surfaces	100
6.6	Isosurface and λ -Connected Boundary Surface Tracking	102
6.7	Remarks	103
	References	103

Part III Discretely Represented Objects: Geometry and Topology

7	Discrete Manifolds: The Graph-Based Theory	107
7.1	What Should be a Discrete Manifold	107
7.2	Discrete Curves on Graphs	109
7.3	Discrete Surfaces	112
7.3.1	A Special Set of 2-cells	112
7.3.2	Discrete Semi-surfaces, 3-cells, and Discrete Surfaces	113
7.4	Properties of Discrete Surfaces	114
7.5	Regular Surface Points	116
7.6	Orientability of Discrete Surfaces	118
7.7	Separability, Simple Connectedness, and Jordan Curve Theorem ..	122
7.8	Discrete k -Manifolds	123
7.8.1	The Recursive Definition of Discrete k -Manifolds	124
7.8.2	An Alternative Definition of Discrete k -Manifolds	125
7.8.3	Boundary of Discrete k -Manifolds	125
7.8.4	Examples of Discrete Manifolds	126
7.9	Remark	126
	References	128

8	Discretization, Digitization, and Embedding	131
8.1	Mesh Generation: Method of Discretization and Triangulation for Continuous Surfaces	131
8.1.1	Cubic-Based Boundary Meshes for 3D Continuous Manifolds	132
8.1.2	Voronoi Decomposition and Curvature-Based Meshes	136
8.2	Digitization and Dual Digital Spaces	136
8.2.1	Examples of Two Basic Digital Spaces	136
8.2.2	Point Spaces in Direct Adjacency	138
8.3	Discrete Manifolds in Voronoi Diagrams and Delaunay Decompositions	140
8.4	Manifolds in Point Spaces and Raster Spaces*	142
8.5	Object Interpretation and Error Analysis: An Exploration	144
8.5.1	Line Digitization and Error Estimation	144
8.5.2	2D Region: Area and the Boundary Length	147
8.6	Remark: Embedding to Euclidean Space	147
	References	148
9	Combinatorial Topology and Digital Topology	149
9.1	Basic Concepts of Topology	149
9.2	Triangulation, Simplicial Complexes, and Cell Complexes	150
9.2.1	Definition of Simplicial Complexes	151
9.2.2	More Examples of Simplicial Complexes and Other Natural Complexes	152
9.2.3	Cell Complexes*	153
9.2.4	Euler Characteristic of Simplicial Complexes	154
9.3	Basic Algebraic Topology: Homotopy Groups and Homology Groups*	155
9.3.1	Review of Groups in Algebra	156
9.3.2	Fundamental Groups and Homotopy Groups	156
9.3.3	Homology Groups	157
9.4	Digital Topology: An Introduction	160
9.4.1	Finite Topology and Grid-Cell Topology	160
9.4.2	Topology of Curves in 2D Digital Space	161
9.4.3	Topology of Digital Surfaces: An Application of Euler's Theorem	164
9.5	Remark	166
	References	167

Part IV Geometric Computation and Processing

10	Geometric Measurements and Geometric Computing	171
10.1	Overview of Measurements in Different Spaces	171
10.2	Basic Measurements in Euclidean Space	172
10.2.1	Length, Area, and Volume	172
10.2.2	Curve Length	173

10.2.3	Surface Area	173
10.2.4	Solid Volume	174
10.2.5	Curvatures	174
10.3	Discrete Measurements for Polygons and Polyhedrons	175
10.3.1	Polygon	175
10.3.2	Polyhedron	175
10.4	Metrics in L_p Spaces and Digital Spaces*	176
10.4.1	Geometric Measures*	177
10.5	Algorithmic Geometry	177
10.5.1	Convex Hulls of Discrete Points	177
10.5.2	Algorithms for Delaunay Triangulations and Voronoi Diagrams	179
10.5.3	Closest Pair Problem	181
10.6	Remarks	181
	References	182
11	Digital Functions, Data Reconstruction, and Numerical Geometry	185
11.1	Digital Functions and Data Interpolation	185
11.1.1	Gradually Varied Functions	186
11.1.2	The Construction Algorithms of Gradually Varied Functions	188
11.1.3	Other Discrete Surface Reconstruction	189
11.2	Numerical Curve and Surface Fitting	190
11.2.1	Curve Interpolation and Approximation	190
11.2.2	Numerical Surface Fitting	192
11.3	Principal Component Analysis	194
11.3.1	Concepts: Mean, Standard Deviation, Variance, and Covariance	194
11.3.2	Covariance Matrix and Principal Components	194
11.4	Mathematical Transformations and Data Science*	196
11.4.1	Fourier Transform and Image Filtering	196
11.4.2	The Radon Transform and Data Reconstruction by Projection	197
11.4.3	Wavelet Transform and Image Compression	197
11.5	Remark: Data Reconstruction in Science and Engineering	198
	References	199
12	Geometric Search and Geometric Processing	201
12.1	Geometric Searching and Matching	201
12.2	Searches in Graphs	202
12.2.1	Breadth First Search and Depth First Search	203
12.2.2	Dijkstra's Algorithm for the Shortest Path	204
12.2.3	Minimum Spanning Tree	204
12.2.4	Online Search, Google Search, and PageRank	205
12.3	Graph Cut and Its Applications to Image Segmentation	207
12.4	Spatial Data Structures: Quadrees, Octrees, and R-trees	209

12.4.1	Quadtrees and Octrees	209
12.4.2	R -tree and Wireless Networking	210
12.5	Classification and Clustering: Distance Related Methods	211
12.5.1	k -Nearest Neighbor Method	212
12.5.2	k -Means Method	212
12.5.3	Tracking and Mean Shift	214
12.5.4	Support Vector Machine Algorithms	214
12.6	Case Study: Cloud Data Computing	214
12.6.1	Manifold Learning on Cloud Data	215
12.6.2	Persistent Homology and Data Analysis	216
12.7	Topological Image Processing: Thinning Algorithms	217
12.8	Connectedness: Geometric Search Using Incomplete Information	218
12.8.1	Connectedness and Segmentation	218
12.8.2	λ -connected Segmentation for Big-pixels and BigData Related Sets	222
12.9	Remarks	225
	References	225

Part V Advanced Topics

13	Discrete Methods in Differential Geometry	231
13.1	Basics of Differential Geometry	231
13.1.1	The Riemannian Metric	232
13.1.2	Curvatures of Surfaces	232
13.1.3	Fundamental Forms of Surfaces	234
13.1.4	Gauss-Bonnet Theorem	236
13.2	Variational Principle and Harmonic Analysis	237
13.3	Discrete Conforming Geometry	238
13.3.1	Circle Packing	240
13.3.2	Case Study: Algorithms of Circle Packing, Harmonic functions, and Conformal Mapping	242
13.4	Curvature Flows and Discrete Curvature Flows on Surfaces	242
13.5	Discrete Minimum Surfaces	245
13.5.1	Laplace-Beltrami Operator	246
13.5.2	Algorithms of Discrete Minimum Surfaces	246
13.6	Remarks: From Gaussian Curvatures to Sectional Curvatures	247
	References	249
14	Advanced Digital Topology and Applications	251
14.1	Topology and Computing	251
14.2	Digital Homology and Image Processing	252
14.3	Digital Curvatures in 3D	253
14.3.1	Digital Gaussian Curvatures	253
14.3.2	Digital Mean Curvatures	256
14.3.3	Digital Principal Curvatures	257

14.4	Gauss-Bonnet Theorem of Closed Digital Surfaces	257
14.5	Homology Groups of Manifolds in 3D Digital Space	259
14.6	Algorithm Design: Theory and Practical Implementation	261
14.6.1	A Linear Algorithm of Finding Homology Groups in 3D ..	261
14.6.2	Input Data Sets	263
14.6.3	Searching Connected Components of a Cubical Data Set ..	263
14.6.4	Pathological Case Detection and Deletion	264
14.6.5	Boundary Search	266
14.6.6	Determination of the Configuration of Boundary Points ...	266
14.7	Case Study: Digital Curvatures Applied to 3D Object Analysis and Recognition	267
14.7.1	Meaning of Digital Curvatures	269
14.7.2	Digital Curvatures and 3D Image Analysis	270
14.7.3	Investigation Based on Digital Mean Curvatures	275
14.7.4	Object Classification Using Curvature Vectors	276
14.7.5	Feature Vectors of 3D Objects Based on Digital Curvatures	276
14.7.6	Similarity and Distance Analysis Based on the Feature Vectors	277
	References	278
15	Select Topics and Future Challenges in Discrete Geometry	281
15.1	Characteristics of Digital Geometric Methods	281
15.2	The Equivalence Between Two Definitions of Digital Surfaces ...	283
15.2.1	The Theorem of Equivalence	283
15.3	The Jordan Curve Theorem on Discrete Surfaces	291
15.3.1	Discrete Deformation and Simply Connected Discrete Surfaces	292
15.3.2	Cross-Over of Simple Paths	293
15.3.3	The Jordan Curve Theorem	296
15.4	Randomized Algorithms of Closest Pair Problem in Geometry ...	306
15.4.1	Relationship to Cloud Computing	307
15.5	BigData, Manifolds, and Advanced Measurement in Geometry ...	308
15.5.1	What is the Bigdata Technology	308
15.5.2	α Shape, Digital α Shape, and Homology Computing	310
15.5.3	Advanced Manifold Learning	310
15.5.4	Integral Points Counting	311
15.5.5	Advanced Measurement in Geometry	313
15.5.6	Discussion of Area Measurement of Shapes in Grid Space .	314
15.6	Historical Concerns: From Geometry of Numbers to Applied Discrete Geometry	315
	References	315
	Glossary	317
	Index	319
