

# Contents

<b>1</b>	<b>An Example</b>	<b>1</b>
1.1	The Goal of This Chapter and Preliminaries	1
1.2	The System with Persistent Memory	4
1.2.1	Finite Propagation Speed	6
1.2.2	A Formula for the Solutions and a Control Problem	8
1.3	Background of Functional Analysis	10
1.3.1	Weak Topology in a Hilbert Spaces	11
1.3.2	Operators and Resolvents	12
1.3.3	Compact Operators	13
1.3.4	Fixed Point and Equations	14
1.3.5	Volterra Integral Equations	15
1.3.6	Test Functions and Distributions	17
1.3.7	Sobolev Spaces	19
1.3.8	Sobolev Spaces and the Laplace Operator	21
1.4	Problems to Chap. 1	24
<b>2</b>	<b>The Model and Preliminaries</b>	<b>27</b>
2.1	The Goal of This Chapter and the System with Persistent Memory	27
2.1.1	The Wave Equation	32
2.2	The Solutions of the System with Memory	35
2.3	Description of the Control Problems	40
2.4	Useful Transformations	42
2.4.1	Finite Propagation Speed	45
2.5	Final Comments	47
2.6	The Derivation of the Models	48
2.6.1	Thermodynamics with Memory and Nonfickian Diffusion	48

2.6.2	Viscoelasticity . . . . .	50
2.6.3	The Special Case of the Telegraphers' Equation . . . . .	52
2.7	Problems to Chap. 2 . . . . .	55
<b>3</b>	<b>Moment Problems and Exact Controllability . . . . .</b>	<b>57</b>
3.1	The Goal of This Chapter and the Moment Problem . . . . .	57
3.1.1	A Worked Example . . . . .	58
3.2	Properties of the Moment Operator When $Y = \ell^2$ . . . . .	61
3.3	Riesz Sequences and Moment Problems . . . . .	65
3.4	Perturbations of Riesz Sequences . . . . .	70
3.4.1	Riesz Sequences of Exponentials in $L^2$ Spaces . . . . .	75
3.4.2	A Second Worked Example . . . . .	77
3.5	Problems to Chap. 3 . . . . .	83
<b>4</b>	<b>Controllability of the Wave Equation . . . . .</b>	<b>87</b>
4.1	Introduction and the Goal of This Chapter . . . . .	87
4.2	Hidden Regularity and Observation Inequality . . . . .	89
4.2.1	Consequences of Controllability on the Eigenvectors. . . . .	90
4.3	Controllability and Moment Problem. . . . .	92
4.4	Problems to Chap. 4 . . . . .	95
<b>5</b>	<b>Systems with Persistent Memory: Controllability via Moment Methods . . . . .</b>	<b>99</b>
5.1	Introduction and the Goal of This Chapter . . . . .	99
5.2	Moment Problem and Controllability of Viscoelastic Systems . . . . .	101
5.3	The Proof of Controllability . . . . .	104
5.3.1	Step A: the Functions $Z_n(t)$ and $R_n(t)$ . . . . .	104
5.3.2	Step B: Closeness to a Riesz Sequence . . . . .	106
5.3.3	Step C: $\omega$ -Independence . . . . .	111
5.4	An Application: Source Identification . . . . .	117
5.5	Problems to Chap. 5 . . . . .	120
<b>6</b>	<b>Systems with Persistent Memory: The Observation Inequality . . .</b>	<b>123</b>
6.1	Introduction and the Goal of This Chapter . . . . .	123
6.2	Hidden Regularity for Systems with Persistent Memory, and a Test for the Solutions . . . . .	124
6.2.1	Controllability and the Observation Inequality . . . . .	129
6.3	The Observation Inequality for Systems with Memory. . . . .	131
6.3.1	Step A: Extension and Derivatives of the Solutions . . . . .	133

6.3.2	Step B: Propagation of Singularities . . . . .	135
6.3.3	Step C: End of the Proof . . . . .	138
6.4	Problems to Chap. 6 . . . . .	140
