Contents

Part I Looking at Images

1 Images and Microstructures 3
1.1 Images and Microstructures 3
1.2 Image Analysis 6
1.2.1 Direct Image Analysis 8
1.2.2 Analysis of Image Segments 9
1.2.3 Analysis of Best-fit Ellipses 10
1.2.4 Analysis of Digitized Outlines 10
1.3 Segmentation 11
1.4 Image Models 12

2 Acquiring Images 15
2.1 Photography 15
2.1.1 Field Photography 15
2.1.2 Photomacrography 17
2.2 Optical Scanners 19
2.3 Light Microscopy 19
2.3.1 Modes of Polarization Microscopy 19
2.3.2 Illumination 23
2.3.3 Magnification and Resolution 24
2.4 Digital Cameras 27
2.5 Electron Microscopy 29
2.5.1 Scanning Electron Microscopy (SEM) 29
2.5.2 Transmission Electron Microscopy (TEM) 30
References 30

3 Digital Image Processing 31
3.1 The Digital Image 31
3.1.1 Bit and Bytes 31
3.1.2 Gray Values 33
3.1.3 Color 33
3.2 Stacks 36
3.2.1 R-G-B Stacks 36
3.2.2 X-Y-Z Stacks 37
3.2.3 X-Y-t Stacks 37
3.2.4 X-Y-α Stacks 39
3.3 Format and Compression 39

3.4 Image SXM . . . 42
3.4.1 Quick Start . . . 43
3.4.2 LUT Window . . . 43
3.4.3 Map Window . . . 44
3.4.4 Info Window . . . 44
3.4.5 Tools . . . 45
3.5 Preparing the Data . . . 49
3.5.1 Exploring the Image . . . 49
3.5.2 Scale and Calibrate . . . 50
3.5.3 Using Color . . . 51
3.5.4 Presenting the Data: The Beauty Case . . . 53
References . . . 56

4 Pre-processing . . . 59
4.1 Comparing Images . . . 59
4.2 Background Corrections . . . 60
4.2.1 Direct Background Correction . . . 61
4.2.2 Background Correction Using a Model Background . . . 64
4.2.3 Background Correction Using a Background Image . . . 64
4.3 Re-sizing . . . 67
4.3.1 Nearest Neighbor . . . 67
4.3.2 Bilinear . . . 68
4.3.3 Bicubic . . . 68
4.4 Noise Removal . . . 72
4.4.1 Median Filtering . . . 72
4.4.2 Fourier Filtering . . . 73
References . . . 73

Part II Segmentation: Finding and Defining the Object

5 Segmentation by Point Operations . . . 77
5.1 Look-Up Tables . . . 77
5.1.1 Changing the Contrast: Linear LUTs . . . 77
5.1.2 Non-linear LUTs . . . 78
5.1.3 Special LUTs . . . 78
5.2 Macros . . . 78
5.2.1 Using Macros . . . 78
5.2.2 Lazy LUTs Macro . . . 80
5.2.3 From LUT to Point Operation . . . 86
5.3 Segmentation by Point Operations . . . 88
5.3.1 Segmentation by Thresholding . . . 90
5.3.2 Segmentation by Gray Level Slicing . . . 90
References . . . 94

6 Post-processing . . . 95
6.1 Ranking Filters . . . 95
6.1.1 Minimum: Median: Maximum . . . 95
6.1.2 Erosion: Dilation . . . 97
6.1.3 Opening: Closing . . . 99

6.2 Copy Modes . . . 100
6.2.1 Logical Operations . . . 100
6.2.2 Combining Images . . . 100
6.3 Structural Filtering . . . 102
6.3.1 Skeletonization . . . 102
6.3.2 Pruning . . . 103
6.3.3 Watershed . . . 103
6.4 Cleaning Up Bitmaps . . . 104
6.5 Phases, Grains and Boundaries . . . 106
References . . . 111

7 Segmentation by Neighborhood Operations . . . 113
7.1 Neighborhood . . . 113
7.2 Averaging Filters . . . 114
7.2.1 Gauss Filters . . . 116
7.2.2 Influence of Shape and Size . . . 118
7.3 Gradient Filters . . . 119
7.3.1 Roberts Cross . . . 123
7.3.2 Sobel Edge Detection . . . 126
7.3.3 Laplace Filters . . . 128
7.4 Edge Detection . . . 130
References . . . 135

8 Image Analysis . . . 137
8.1 Image Segments and Best-Fit Ellipses . . . 137
8.2 Deriving Size and Shape Descriptors . . . 140
8.3 Example of Image Analysis . . . 142
8.4 Digitizing Outlines . . . 144
8.4.1 Exporting Segment Boundaries . . . 146
8.4.2 Creating Polygonal Chains . . . 147
8.4.3 The Nature of the Square Grid . . . 149
8.4.4 From Discrete to Continuous . . . 151
8.5 SCASMO . . . 151
8.5.1 How to Run SCASMO . . . 152
8.6 The FABRIC Programs . . . 156
References . . . 156

9 Test Images . . . 157
9.1 Numerical Simulations . . . 157
9.1.1 Ellipses . . . 157
9.1.2 Shape and Orientation Distributions . . . 158
9.1.3 Spatial Distributions . . . 161
9.2 Synthetic Particle Fabrics . . . 161
9.3 RANDOM . . . 163
9.3.1 How to Run RANDOM . . . 164
9.4 MONTECARLO . . . 166
9.4.1 Random Sampling . . . 167
9.4.2 How to Run MONTECARLO . . . 169
References . . . 170

Part III Measuring Size and Volume

10 Volume Determinations 173
10.1 Measuring Area Fractions 173
10.1.1 Measuring Areas in Image SXM 174
10.1.2 Counting Pixels 175
10.1.3 Estimating Areas 177
10.2 Estimating Volume Fractions 177
10.3 Determining Errors 179
10.3.1 Errors Associated with Point Counting 179
10.3.2 Errors Associated with Area Measurements . . . 180
10.4 Practical Application 180
10.5 Surface Fractions 182
References 185

11 2-D Grain Size Distributions 187
11.1 Measures for Grain Size 187
11.2 Mean Grain Size 192
11.3 Grain Size Distribution 194
11.4 Grain Size Mapping 196
References 199

12 3-D Grain Size 201
12.1 Random Sectioning of a Single Sphere 201
12.2 From 3-D Spheres to 2-D Sections 205
12.2.1 The Stereological Model 205
12.2.2 Four Typical Distributions 207
12.3 From 2-D Sections to 3-D Spheres 207
12.4 STRIPSTAR 213
12.4.1 How to Run STRIPSTAR 214
12.5 Practical Applications 215
12.5.1 Particles in a Matrix 216
12.5.2 Crystalline Aggregates 217
12.5.3 Shortcuts 219
12.5.4 The Influence of Shape: How Random is Random? 221
12.5.5 Error Estimation 222
12.5.6 Phi-Values and Logarithmic Binning 222
References 224

13 Fractal Grain Size Distributions 225
13.1 Fragmentation in Nature and Experiment 225
13.2 Fragmenting the Cube 227
13.2.1 The Fractal Model for Sectioning 228
13.2.2 Fractal Dimensions 229
13.2.3 Fragmentation Numbers $F > 8$ or $F < 8$ 231
13.2.4 Continuous Fragmentation 232
13.3 Fragmentation Matrix 233
13.3.1 Deriving the Fractal Dimension from the Matrix 234
13.3.2 Fractal Dimension from the Matrix and from Grain Size Analysis 239

13.4 Visualizing Grain Size Distributions 241
13.4.1 Preparing the Bitmap 242
13.4.2 Gauss Filtering 243
13.4.3 Converting the Matrix to the Fractal Dimension 245
13.5 Examples 249
References 249

Part IV Quantifying Shape and Orientation

14 Particle Fabrics 253
14.1 Projections of a Single Ellipse 254
14.2 Projections of Non-elliptical Shapes 255
14.3 Best-Fit Ellipses and Convex Hulls 256
14.4 Projections of Sets of Ellipses 261
14.5 PAROR 263
14.5.1 How to Run PAROR 264
14.5.2 The Monitor Printout File 265
14.5.3 The B(α) File 268
14.5.4 The Axes Orientation File 269
14.5.5 The Particle Data File 270
14.6 PAROR Analysis of Particles in a Matrix 270
14.7 PAROR Analysis of Crystalline Aggregates 272
14.8 PAROR Analysis of Surfaces 274
14.9 Restoring the Input 276
14.10 PAROR Analysis Within Image SXM 279
References 280

15 Surface Fabrics 283
15.1 Projection of Line Segments 283
15.2 Straight Line Segments 284
15.3 SURFOR 285
15.3.1 How to Run SURFOR 287
15.3.2 The Monitor Printout File 287
15.3.3 The A(α) File 289
15.3.4 The Surface Orientation File 289
15.3.5 The Characteristic Shape File 289
15.4 SURFOR Analysis of Lines Segments 289
15.5 SURFOR Analysis of Closed Outlines 293
15.6 SURFOR Versus PAROR Analysis 294
15.7 SURFOR Analysis of Incomplete Outlines 297
15.8 SURFOR Analysis of Open Lines 298
15.9 SURFOR Analysis Within Image SXM 301
References 303

16 Strain Fabrics 305
16.1 Fabrics and Strain 305
16.1.1 Strain Markers 305
16.1.2 The Geometry of Strain 306
16.2 Measuring Strain with SURFOR 308
16.3 Testing for Strain 312

16.4 Practical Examples 314
16.5 SURFOR and PAROR Versus the R_f–φ Method 317
References 320

17 Shape Descriptors 323
17.1 Shape Descriptors 323
17.1.1 Deviation from the Circular Form: Classical Shape Factors 324
17.1.2 Aspect Ratios 326
17.1.3 Convexity: Concavity 328
17.1.4 Excess Perimeter and Defect Area 329
17.1.5 Angularity 331
17.2 iSHAPES 335
17.2.1 How to Run iSHAPES 335
17.3 Manual and Automatic Digitization 337
17.4 Applications of iSHAPES 339
17.4.1 Fault Rock Microstructures 339
17.4.2 Grain Boundary Migration Microstructures . . . 342
17.4.3 Annealing Microstructures 344
References 347

Part V Spatial Relationships

18 Spatial Distributions 351
18.1 Basic Concepts 351
18.1.1 Spatial Distributions 352
18.1.2 Random Mixing 354
18.1.3 Volume Model and Surface Model 356
18.2 What to Measure 356
18.3 Test Samples 357
18.4 Analysis of a Polyphase Material 359
18.4.1 Focusing on One Phase 361
18.4.2 Selecting Two Phases 363
18.5 Errors 365
18.6 Orientation Dependent Analysis 366
References 368

19 Spatial Frequencies 369
19.1 Spatial Frequencies 369
19.2 Fourier Transforms 372
19.2.1 One-Dimensional Fourier Transform 372
19.2.2 Two-Dimensional Fourier Transform 373
19.2.3 Discrete Fourier Transforms 373
19.2.4 Fast Fourier Transform 375
19.3 Interpreting Fourier Transform Images 376
19.4 Frequency Filtering 377
19.4.1 Selecting Frequencies 378
19.4.2 High-Pass and Low-Pass Filtering 379
19.5 Practical Applications 385
References 388

20 Autocorrelation Function 389
20.1 Principles of Autocorrelation 389
20.1.1 Mathematical Definition 390
20.1.2 Autocorrelation Function of Single Shapes . . . 391
20.1.3 Autocorrelation Function of Sets of Shapes . . . 392
20.2 Analysis of Autocorrelation Functions 397
20.3 Practical Applications of Autocorrelation Functions . . . 398
20.3.1 Lazy ACF Tiling Macro 400
20.3.2 Bulk ACF 402
20.3.3 Local ACFs 403
20.4 Autocorrelation Functions and Strain Analysis 405
20.4.1 Heterogeneous Strain 405
20.4.2 Autocorrelation of Center Points 407
20.4.3 Deformation and Reaction 408
References 409

Part VI Orientation Imaging

21 Crystal Orientation and Interference Color 413
21.1 Basic Concepts 414
21.2 Interference Colors 417
21.2.1 Birefringence 417
21.2.2 Optical Path 418
21.2.3 Spectra of Interference Colors 419
21.2.4 Color from Spectra 421
21.2.5 First-Order Colors and Section Thickness 421
21.2.6 Adding the Wave Plate 422
21.3 The Crystallographic Color Space 425
21.3.1 Polstacks 426
21.3.2 Polstack Sections 426
21.4 Color to Monochrome 428
21.4.1 Finding the Best Filter 429
21.4.2 Resolving the Azimuth 431
21.4.3 Resolving the Inclination 433
21.5 LUTs for CIP 437
21.5.1 Converting Intensity to Inclination 437
References 438

22 Computer-Integrated Polarization Microscopy 439
22.1 How CIP Works: The Basic Idea 441
22.2 Acquire the Input 443
22.2.1 The Structure of the Input Stack 444
22.2.2 The Micrographs 445
22.2.3 Circular Polarization 450
22.3 Prepare the Input Stack 451
22.4 Pre-process the Input Stack 456
22.4.1 Calibration Files 456
22.4.2 Image Calibration 457
22.4.3 Lighting and Background Corrections 457
22.4.4 Section Thickness 457

22.5 Do the CIP 460
22.6 Viewing the Result 467
22.7 Pole Figures 469
22.8 Refining the Calculation 469
References 475

23 Orientation and Misorientation Imaging 477
23.1 Orientation Imaging: Changing the Colors 477
23.2 Using EBSD Input 480
23.2.1 Full Texture Versus c-Axis 480
23.2.2 Euler Angles to c-Axes 480
23.3 Masking 481
23.3.1 Selecting Regions 481
23.3.2 Selecting Minerals 487
23.4 Misorientation Imaging 487
23.4.1 Principal Misorientations 488
23.4.2 Misorientation with Respect to Reference Direction 488
23.4.3 From Misorientation to Orientation 488
23.4.4 Misorientation Profiles 490
23.5 Segmentation in Orientation Space 493
23.5.1 Grain Boundaries and Sub-grain Boundaries . . . 494
23.5.2 Flat Grains 497
23.6 Orientation Tracking 497
23.6.1 Texture Domains 498
23.6.2 Texture Domains of a Low-Strain Sample 498
23.6.3 Texture Domains of a High-Strain Sample . . . 501
23.6.4 Domain Grain Size 503
23.7 Orientation Gradient Imaging 506
23.7.1 Orientation Gradients 506
23.7.2 Orientation Gradient Density 506
23.7.3 Sharp Boundaries 507
23.8 Texture-Dependent Shape Analysis 509
References 512
