1	Introduction	1
1.1	The Meaning of Wind Turbine Aerodynamics	1
1.2	Problems	5
	References	6
2	Types of Wind Turbines	7
2.1	Historical and State-of-the-Art Horizontal Axis Wind Turbines	8
2.2	Non-Standard HAWTs	10
2.3	Small Wind Turbines	10
2.4	Vertical Axis Wind Turbines	12
2.5	Diffuser Augmented Wind Turbines	13
2.6	Drag-Driven Turbines	14
2.7	Counter-Rotating Wind Turbines	17
2.8	Concluding Remarks	18
2.9	Problems	18
	References	19
3	Basic Fluid Mechanics	21
3.1	Basic Properties of Air	21
3.2	The Laws of Fluid Mechanics in Integral Form	22
3.2.1	Mass Conservation	22
3.2.2	Balance of Momentum	22
3.2.3	Conservation of Energy	24
3.3	Differential Equations of Fluid Flow	25
3.3.1	Continuity Equation in Differential Form	25
3.3.2	Momentum Balance	26
3.3.3	Differential Energy Equation	26
3.4	Viscosity and Navier–Stokes Equations	27
3.5	Potential Flow	28
3.5.1	General 3D Potential Flow	28
3.5.2	2D Potential Attached Flow	30

3.5.3	2D Potential Flow Behind a Semi-infinite Set of Lamina	34
3.5.4	2D Separated Flow	34
3.6	Formulation of Fluid Mechanics in Terms of Vorticity and Vortices	35
3.6.1	Flow and Forces	37
3.6.2	Thin Airfoil Theory	37
3.6.3	Vortex Sheets	39
3.6.4	Vorticity in Inviscid Flow	40
3.7	Boundary Layer Theory	40
3.7.1	The Concept of a Boundary Layer	40
3.7.2	Boundary Layers with Pressure Gradient	43
3.7.3	Integral Boundary Layer Equations	43
3.8	Stability of Laminar Flow	45
3.9	Turbulence	46
3.9.1	Introduction	46
3.9.2	Mathematical Theory of Turbulence	47
3.9.3	The Physics of Turbulence	50
3.9.4	Kolmogorov's Theory	50
3.9.5	Dissipation Scales	53
3.9.6	Turbulence as a Stochastic Process	55
3.9.7	The Turbulent Boundary Layer	57
3.9.8	The Log Law of the Wall	58
3.10	Wind as Turbulent Flow in the Lower Atmosphere	59
3.11	Problems	61
	References	62
4	Inflow Conditions to Wind Turbines	65
4.1	Importance of Inflow Conditions to Rotor Performance	65
4.2	Wind Shear	65
4.3	Unsteady Inflow Versus Turbulence	67
4.4	Measuring Wind	68
4.5	Synthetic Winds	69
4.6	Problems	71
	References	72
5	Momentum Theories	75
5.1	One-Dimensional Momentum Theory	75
5.1.1	Forces	75
5.1.2	Power	77
5.1.3	Remarks on Beating Betz	78
5.2	General Momentum Theory	78
5.3	Limits and Extensions of General Momentum Theories	84
5.4	The Blade Element Momentum Theory	85

5.4.1	The Original Formulation	85
5.4.2	Engineering Modifications	86
5.4.3	Comparison to Actual Designs	89
5.5	Optimum Rotors I	91
5.6	Vertical Rotors	91
5.7	Problems	92
	References	96
6	Application of Vortex Theory	99
6.1	Vortices in Wind Turbine Flow	99
6.2	Analytical Examples	100
6.3	Vortex Patches	101
6.4	Vortex Lines	102
6.4.1	Vortex Lines of Finite Length	102
6.4.2	Preliminary Observations on Vortex Core Sizes	103
6.4.3	Helical Vortex Lines	104
6.5	Helical Vortex Sheets	106
6.6	Stream Function Vorticity Formulation	109
6.6.1	Nonlinear Actuator Disk Theory	109
6.6.2	Application to Wind Turbines	113
6.7	Optimum Rotors II	116
6.8	Problems	116
	References	118
7	Application of Computational Fluid Mechanics	121
7.1	Introduction	121
7.2	Preprocessing	122
7.3	Solving the Numerical Equations	126
7.3.1	Discretization of Differential Equations	126
7.3.2	Boundary Conditions	127
7.3.3	Numerical Treatment of the Algebraic Equations	127
7.4	Post-processing: Displaying and Checking the Results	127
7.5	Turbulence Models for CFD	127
7.5.1	Prandtl's Mixing Length Model	129
7.5.2	One Equation Models	129
7.5.3	Spalart-Allmaras Model	130
7.5.4	Two Equation Models	131
7.5.5	Standard $k-\varepsilon$ Model	132
7.5.6	$k-\varepsilon$ Model from Renormalization Group Theory	133
7.5.7	Boundary Conditions for Turbulent Quantities Close to Walls	134
7.5.8	Low-Re Models	135
7.5.9	Menter's Shear Stress Transport Model	135
7.5.10	Reynolds Stress Models	136

7.5.11	Direct Numerical Simulation	137
7.5.12	Large and Detached Eddy Simulation	137
7.6	Transitional Flow	138
7.7	Actuator Disk and Actuator Line Modeling of Wind Turbine Rotors	139
7.7.1	Description of the Model and Examples	139
7.7.2	Improved Models for Finite Numbers of Blades in BEM Codes	141
7.8	Full-Scale CFD Modeling of Wind Turbine Rotors	142
7.8.1	NREL Phase VI Turbine	143
7.8.2	The Mexico Rotor.	143
7.8.3	Commercial Wind Turbines	148
7.9	Concluding Remarks About Use (and Abuse) of CFD	151
7.10	Problems	151
	References	155
8	Experiments	159
