1	Introduction	1
1.1	Scope of Modeling	1
1.2	Interdisciplinary Aspects	3
1.2.1	Continuum-Mechanical View	3
1.2.2	Mathematical View	4
1.2.3	Computer-Scientific View	9
1.3	Taxonomy for Porous/Fractured Media Process and Numerical Modeling	14
1.4	Overview of This Book	14

Part I Fundamentals

2	Preliminaries	23
2.1	Mathematical Foundation	23
2.1.1	Notation Rules and Algebra with Vectors and Tensors	23
2.1.2	Relations for Scalar and Vector Products	26
2.1.3	Coordinate System and Spatial Vector	28
2.1.4	Eulerian and Lagrangian Coordinates	29
2.1.5	Coordinate Transformations	31
2.1.5.1	Mapping	32
2.1.5.2	Cylindrical Coordinate System	33
2.1.5.3	Rotated Coordinate System	35
2.1.5.4	Volume, Surface and Line Integral Elements	36
2.1.6	Spatial Variables and Their Derivative Operations	38
2.1.7	Gauss's Integral Theorem	40
2.1.8	Stokes' Theorem	41
2.1.9	Reynolds' Transport Theorem	41
2.1.10	Classification of Vector Fields	42

2.1.11	Potential Function, Streamfunction, Streamline and Pathline	42
2.2	Classifications and Definitions	45
2.2.1	Water and Aquifer	45
2.2.2	Terms and Quantities	48
3	Porous Medium	57
3.1	Fundamental Concept.....	57
3.2	Representative Elementary Volume (REV)	58
3.3	Average Operators and Average Quantities.....	61
3.4	Averaging Theorems	63
3.5	Aquifer Averaging	64
3.6	Fundamental Microscopic Balance Laws and Conservation Principles	66
3.7	Macroscopization of Balance Equations	69
3.7.1	General Balance Equation	69
3.7.2	Conservation of Mass.....	71
3.7.3	Conservation of Species Mass	72
3.7.4	Conservation of Momentum.....	73
3.7.5	Conservation of Energy: First Law of Thermodynamics.....	74
3.7.6	Entropy Balance	74
3.7.7	Second Law of Thermodynamics	75
3.7.8	Vertically Averaged Aquifer Balance Equations	76
3.8	Constitutive Theory	80
3.8.1	Kinematics	80
3.8.2	Constitutive Equations.....	83
3.8.3	Equilibrium Restrictions.....	85
3.8.4	Basic Balance Equations and Entropy Inequality	87
3.8.5	Development of Phenomenological Equations and Constitutive Relations	89
3.8.5.1	Deviatoric Fluid Stress Tensor τ^f	91
3.8.5.2	Deviatoric Drag of Fluid Momentum Exchange f_τ^f	93
3.8.5.3	Solid Stress Tensor σ^s	94
3.8.5.4	Heat Flux Vector j_T^α	96
3.8.5.5	Species Mass Flux Vector j_k^f	98
3.8.5.6	Species Reaction Rate $r_k^\alpha + R_k^\alpha$	100
3.8.6	Equations of State (EOS)	102
3.8.6.1	Fluid Density ρ^f	102
3.8.6.2	Internal Energy E^α	103
3.8.6.3	Dynamic Viscosity μ^f	106
3.8.7	Additional Closure Relations.....	109
3.8.7.1	Capillary Pressure p_c	109
3.8.7.2	Relative Permeability k_r^f	111

3.9	Complete Equations of Multiphase Flow and Transport in Deforming Porous Media	111
3.9.1	General Formulation	111
3.9.2	Proper Reduction of Governing Equations for Multiphase Variable-Density Flow, Mass and Heat Transport in Porous Media: First Level Reduction	116
3.10	Final Model Equations for Flow, Mass and Heat Transport	121
3.10.1	Single Liquid Phase Variable-Density Flow, Mass and Heat Transport in Variably Saturated Porous Media: Second Level Reduction	121
3.10.2	Choice of Suited Variables	122
3.10.3	Oberbeck-Boussinesq Approximation and Extension	125
3.10.4	Reformation of Terms	127
3.10.5	Basic Model Equations of Single Liquid Phase Variable-Density Darcy-Type Flow, Mass and Heat Transport in Variably Saturated Porous Media: Second Level Reduction	129
3.10.6	Basic Model Equations of Variable-Density Darcy-Type Flow, Mass and Heat Transport in Groundwater: Third Level Reduction	129
3.10.7	Basic Model Equations of Vertically Averaged Flow, Mass and Heat Transport in Unconfined and Confined Aquifers: Specific Case of Third Level Reduction	131
3.11	Standard Model Equations for Solving Flow, Mass and Heat Transport in Porous Media	138
4	Discrete Feature	141
4.1	Discrete-Feature Conceptual Model	141
4.2	Fundamental Relations	143
4.2.1	General Balance Statement	143
4.2.2	Forms of Balance Equations	143
4.2.3	Hydraulic Radius	145
4.2.4	Free Surface Condition	145
4.2.5	Viscous Stresses on Surfaces	147
4.3	Basic Balance Laws	148
4.3.1	Liquid Mass Conservation	148
4.3.2	Liquid Momentum Conservation	149
4.3.2.1	Darcy Flow in Porous Media	150
4.3.2.2	Plane and Axisymmetric Parallel (Hagen-Poiseuille) Flow	151
4.3.2.3	Laws of Liquid Motion for Overland and Channel Flow	154

4.3.3	Species Mass Conservation	156
4.3.4	Energy Conservation	157
4.3.5	Generalized Model Equations	158
4.3.5.1	Flow	158
4.3.5.2	Species Mass	158
4.3.5.3	Heat	159
4.4	Specifying Geometries and Hydraulic Radii for Different Types of Discrete Features	159
4.4.1	Standard Settings	159
4.4.2	Hydraulic Aperture of Hagen-Poiseuille Law	159
4.4.3	Roughness Coefficient of Manning- Strickler Law	163
5	Chemical Reaction	167
5.1	General	167
5.2	Governing Mass Transport Equations	168
5.2.1	Balance Statements	168
5.2.2	Reaction Rates and Multiphase Aspects	169
5.3	Basic Chemical Kinetics	172
5.3.1	Reaction Stoichiometry	172
5.3.2	Examples	173
5.3.3	Rate Laws and Rate Constants	174
5.3.4	Chemical Equilibrium and Law of Mass Action (LMA)	175
5.3.5	Steady-State Approximation (SSA)	175
5.3.6	Pre-equilibria	176
5.4	Selected Reaction Processes	177
5.4.1	Binary Exchange Reactions (Adsorption Isotherms) ...	177
5.4.1.1	Langmuir Adsorption Isotherm	178
5.4.1.2	Henry Adsorption Isotherm	178
5.4.1.3	Freundlich Adsorption Isotherm	179
5.4.1.4	Adsorption Function and Retardation	180
5.4.2	First-Order Decay Reactions	181
5.4.3	Consecutive Reactions	182
5.4.4	Michaelis-Menten Mechanism	183
5.5	Generalized Kinetic Formulations	186
5.5.1	Degradation Type Kinetics	187
5.5.2	Arrhenius Type Kinetics	188
5.5.3	Monod Type Kinetics	189
5.5.4	Freely Editable Kinetic Expressions of R_k	190
6	Initial, Boundary and Constraint Conditions	193
6.1	Introduction	193
6.2	Initial Conditions (IC's)	194
6.3	Standard Boundary Conditions (BC's) and Well-Type Singular Point Conditions (SPC's)	194

6.3.1	Flow BC	195
6.3.1.1	○ Dirichlet-Type (1st Kind) BC	195
6.3.1.2	× Neumann-Type (2nd Kind) BC	195
6.3.1.3	⊗ Cauchy-Type (3rd Kind) BC	196
6.3.1.4	⌈ Well-Type SPC	198
6.3.2	Mass Transport BC	199
6.3.2.1	○ Dirichlet-Type (1st Kind) BC	199
6.3.2.2	× Neumann-Type (2nd Kind) BC	199
6.3.2.3	⊗ Cauchy-Type and Robin-Type (3rd Kind) BC	200
6.3.2.4	⌈ Well-Type SPC	203
6.3.3	Heat Transport BC	204
6.3.3.1	○ Dirichlet-Type (1st Kind) BC	204
6.3.3.2	× Neumann-Type (2nd Kind) BC	204
6.3.3.3	⊗ Cauchy-Type and Robin-Type (3rd Kind) BC	205
6.3.3.4	⌈ Well-Type SPC	207
6.4	BC Constraints (BCC's) and SPC Constraints (SPCC's)	208
6.4.1	Flow BCC and SPCC	209
6.4.2	Mass Transport BCC and SPCC	212
6.4.3	Heat Transport BCC and SPCC	215
6.5	Special BC's	216
6.5.1	Free (Phreatic) Surface BC	216
6.5.2	Seepage Face BC	217
6.5.3	Surface Ponding BC	218
6.5.4	Integral BC	219
6.5.5	Gradient-Type BC	220
6.5.6	Multilayer Well BC	221
6.5.7	Outflow BC (OBC)	224
7	Anisotropy	227
7.1	Principal Directions and Rotation	227
7.2	Two-Dimensional Anisotropy	228
7.3	Three-Dimensional Anisotropy	230
7.3.1	General 3D Anisotropy Formulation	230
7.3.2	Shape-Derived 3D Anisotropy by Springer's Method	231
7.4	Special Cases	233
7.4.1	Axis-Parallel Anisotropy	233
7.4.2	Isotropy	234

Part II Finite Element Method

8	Fundamental Concepts of Finite Element Method (FEM)	239
8.1	Introduction	239
8.2	Basic Model Equations and Prototypical PDE's	243

8.3	Mathematical Classification of PDE's	246
8.4	Methods of Approximation	248
8.4.1	Approximate Solution	248
8.4.2	Definition of Errors and Related Functional Spaces ...	250
8.4.2.1	Sobolev Space $W_p^m(\Omega)$ Norm Error	250
8.4.2.2	Hilbert Space $H^m(\Omega)$ Norm Error	250
8.4.2.3	Energy Norm Error	251
8.4.2.4	$L_p(\Omega)$ —Norm (Banach Space Norm) Error	251
8.4.2.5	Root Mean Square (RMS) and Other Pointwise Error Norms	252
8.4.3	Method of Weighted Residuals (MWR)	252
8.5	Weak Forms	257
8.5.1	Divergence Form of ADE	257
8.5.2	Convective Form of ADE	259
8.5.3	Discussion of Both Weak Forms	260
8.6	Spatial Discretization by Finite Elements	262
8.7	Elementwise Continuous Approximations	263
8.8	Finite Element Basis Functions	266
8.8.1	Shape Function, Master Element and Isoparametric Element Type	266
8.8.2	Local and Global Shape Functions.....	268
8.9	Galerkin Finite Element Weak Statement	275
8.10	Assembly Process	279
8.10.1	General Procedure	279
8.10.2	Parallelization via Element Agglomeration	282
8.11	Finite Element Basis Operations	283
8.12	Numerical and Analytical Integration.....	288
8.13	Temporal Discretization	293
8.13.1	General	293
8.13.2	Mass Lumping	295
8.13.3	Galerkin Approximation in Time	296
8.13.4	The θ —Family of Time Integration Methods	297
8.13.5	Predictor-Corrector Methods	299
8.13.5.1	GLS 1st-Order Forward Euler (FE)/Backward Euler (BE) Scheme	300
8.13.5.2	GLS 2nd-Order Adams- Bashforth (AB)/Trapezoid Rule (TR) Scheme	302
8.13.5.3	Major Solution Steps and Tactic of Time Step Control	304
8.13.6	Stability Properties.....	308
8.14	Upwinding	317
8.14.1	Pros and Cons of Upwind Methods	317
8.14.2	Petrov-Galerkin Finite Element Method (PGFEM)	321

8.14.3	Streamline Upwind (SU) and Full Upwind (FU) Method	327
8.14.4	Shock Capturing (SC) Method	329
8.14.5	Petrov-Galerkin Least Square (PGLS) Finite Element Method	332
8.14.5.1	Operator Splitting	333
8.14.5.2	Approximation of the Diffusive Part	334
8.14.5.3	Approximation of the Advective Part	335
8.14.5.4	Assembly of the Diffusive and Advective Parts	338
8.14.6	An Illustrative Example	339
8.15	Summarized Quantitative Discussion of Error and Stability for the Favorite Schemes	344
8.16	Implementation of Dirichlet-Type BC's in the Resulting Matrix System	349
8.17	Solution of Linear Systems of Algebraic Equations	351
8.17.1	Direct Solution Methods	352
8.17.1.1	Gaussian Elimination	352
8.17.1.2	<i>LU</i> Matrix Decomposition and Crout Method	353
8.17.1.3	Other Methods	356
8.17.1.4	Fill-in Reduction and Nodal Reordering	357
8.17.2	Iterative Solution Methods	358
8.17.2.1	Preconditioning	360
8.17.2.2	The Preconditioned Conjugate Gradient (PCG) Method	362
8.17.2.3	The Preconditioned Restarted ORTHOMIN Method	363
8.17.2.4	The Preconditioned Restarted GMRES Method	364
8.17.2.5	The Preconditioned Lanczos Conjugate Gradient Square (CGS) Method	366
8.17.2.6	The Preconditioned Lanczos Bi-conjugate Gradient Stabilized (BiCGSTAB) Method	367
8.17.2.7	Multigrid (MG) Methods	367
8.18	Treatment of Nonlinearities	375
8.18.1	Fixed Point Form and Picard Iteration Method	375
8.18.2	Newton Iteration Method	377
8.18.3	Modified Newton and Quasi-Newton Iteration Method	379
8.18.4	Transient Nonlinear Problem Solution	381

8.19	Derived Quantities	382
8.19.1	Computing First Derivatives at Nodes	382
8.19.1.1	Global Smoothing	384
8.19.1.2	Superconvergent Flux Evaluation and Local Smoothing	385
8.19.1.3	Superconvergent Patch Recovery (SPR)	388
8.19.2	Computing First Derivatives at Exterior or Interior Boundaries: The Consistent Boundary Flux Method (CBFM) and Budget Analysis	391
8.19.2.1	Consistently Derived Boundary Flux Based on Weak Forms	391
8.19.2.2	Lumped Solution	393
8.19.2.3	Integral Boundary Flux	394
8.19.2.4	Auxiliary Problem Formulation for Convective Form of ADE	394
8.19.2.5	Illustrative Example	396
8.19.3	Continuous Finite Element Approach Is Locally Conservative	398
8.19.4	Note on Mixed Finite Element Formulations	402
9	Flow in Saturated Porous Media: Groundwater Flow	405
9.1	Introduction	405
9.2	Basic Equations	405
9.2.1	3D, Vertical 2D and Axisymmetric Problems	405
9.2.2	Horizontal 2D Flow in Unconfined Aquifers	406
9.2.3	Horizontal 2D Flow in Confined Aquifers	408
9.3	Finite Element Formulation	408
9.3.1	Weak Form	409
9.3.2	GFEM and Resulting Matrix Systems	409
9.4	Time Integration	411
9.5	Free Surface Computation	412
9.5.1	Requirements	412
9.5.2	Horizontal 2D Flow in Unconfined Aquifers	413
9.5.3	3D Free-Surface Flow Modeling with Moving Meshes and BASD Technique	416
9.5.4	3D Free-Surface Flow Modeling with Fixed Meshes and Pseudo-unsaturated Conditions	422
9.6	Incorporation of Multilayer Well Flow BC	425
9.7	Computation of Darcy Velocities and Flow Budget Analysis	427
9.8	Examples	429
9.8.1	Transient Flow to a Well in a Confined and Unconfined Aquifer	429
9.8.2	3D Anisotropy and Flow Patterns of Groundwater Whirls	435

9.8.2.1	Two-Layer Crosswise Anisotropy	435
9.8.2.2	Model of Nine-Layer Randomly Distributed Anisotropy	438
10	Flow in Variably Saturated Porous Media	445
10.1	General	445
10.2	Basic Equations	446
10.3	Three Essential Forms of the Richards' Equation and Choice of Primary Variables	448
10.4	Use of Transformation Methods	453
10.5	Finite Element Formulation of the Mixed $h - s$ -Based Form of Richards' Equation	455
10.5.1	Weak Form	455
10.5.2	GFEM and Resulting Nonlinear Matrix System	456
10.5.3	Time Integration and Celia et al.'s Approximation Method of Picard Iteration	458
10.6	Finite Element Formulation of the Standard h -Based Form of Richards' Equation	461
10.6.1	Spatial Discretization and Resulting Nonlinear Matrix System	462
10.6.2	Time Integration and Iteration Methods	463
10.7	Primary Variable Switching Technique (PVST)	465
10.7.1	Basic Matrix System in the $\psi - s$ -Formulation	466
10.7.2	Primary Variable Switching Methodology	467
10.7.3	Deducing Standard Schemes from PVST	469
10.7.3.1	Newton Scheme of Mixed $\psi - s$ -Formulation	470
10.7.3.2	Picard Scheme of Mixed $\psi - s$ -Formulation: Celia et al.'s Approximation Method	470
10.7.3.3	Newton Scheme of Standard ψ -Formulation	471
10.7.3.4	Picard Scheme of Standard ψ -Formulation	471
10.7.4	Convergence Criteria	472
10.7.5	Solution Control	473
10.8	Overview of FEFLOW's Solution Strategies for Unsaturated-Saturated Flow	477
10.9	Modeling Hysteresis in the Retention Curve	479
10.10	Treatment of Prescribed Time-Varying Porosity	483
10.11	Computation of Darcy Velocities and Flow Budget Analysis	485
10.12	Upstream Weighting	487

10.13	Examples	488
10.13.1	Variably Saturated Flow in a Homogeneous Soil Column	488
10.13.1.1	Gardner's Problem	488
10.13.1.2	Celia et al.'s Problem	490
10.13.1.3	Williams et al.'s Problem	492
10.13.1.4	Lenhard et al.'s Problem: Hysteretic Flow	495
10.13.2	Variably Saturated Flow in an Inhomogeneous Soil Column	497
10.13.2.1	Van Genuchten's Problem	497
10.13.2.2	Brunone et al.'s Two-Layer Problem with Srivastava and Yeh's Analytical Solution	502
10.13.2.3	Matthews et al.'s Problem: Two-Layer Soil Contrast	503
10.13.3	Forsyth and Kropinski's Problem: Infiltration in a Large Caisson	505
10.13.4	Perched Water Table Problems	509
10.13.4.1	Aquifer-Aquitard-Aquifer Test Case	509
10.13.4.2	Kirkland et al.'s Problem	512
10.13.5	Capillary Barrier Modeling	514
10.13.5.1	Webb's Problem	516
10.13.5.2	Forsyth and Kropinski's Problem	519
10.13.6	Dam Seepage Problem	522
10.13.7	On Draining and Flooding	525
10.13.7.1	Vachaud et al.'s Problem: Drainage Experiment	526
10.13.7.2	Free Drainage of a Thick Porous Block	528
10.13.7.3	Pit Flooding Test Case	533
11	Variable-Density Flow, Mass and Heat Transport in Porous Media	537
11.1	Introduction	537
11.2	Basic Equations	541
11.3	Sharp Interface Approximation	544
11.4	Hydrostatic Condition and Evaluation of Observation Wells	546
11.5	Convection Phenomena	548
11.5.1	Horton-Rogers-Lapwood Problem	548
11.5.2	Dimensionless Equations and Characteristic Numbers	550
11.5.3	Convection Regimes	552
11.5.3.1	Free Convection	552
11.5.3.2	Double-Diffusive (Thermohaline) Convection	554

11.6	Finite Element Formulation	558
11.6.1	Weak Forms	558
11.6.2	GFEM and Resulting Nonlinear Matrix System	559
11.6.3	On Upwinding and Numerical Dispersion.....	562
11.6.4	Preferred Strategy for Solving the Coupled Nonlinear Spatio-Temporarily Discretized System	563
11.7	Consistent Velocity Approximation	568
11.7.1	The Hydrostatic Condition: The Requirement of Consistency	569
11.7.2	The Artifact: Spurious Nonconsistent Velocities and Common Ways to Overcome	570
11.7.3	The Frolkovič-Knabner Algorithm	572
11.8	Flow, Species Mass and Heat Budget Evaluation	573
11.9	Modeling 2D Horizontally Schematized Aquifers Using Projected Gravity	575
11.9.1	2D Treatment of Thin, Slightly Sloped or Curved Aquifers	575
11.9.2	Vertically Averaged Equations in a Confined Aquifer Including Gravity Term.....	576
11.9.3	Local (Layer-Oriented) Coordinates \mathbf{x}' and the Projected Gravity Term	577
11.9.4	Limitations	579
11.10	Non-Fickian Dispersion in Variable-Density Flow.....	581
11.10.1	Nonlinear Dispersion at High- Concentration Gradients.....	581
11.10.2	Extended Equations.....	581
11.10.3	Numerical Solution for Nonlinear Dispersion.....	582
11.11	Benchmarks and Examples	583
11.11.1	Hydrostatic Test.....	584
11.11.2	Henry Problem	585
11.11.3	Salt Dome Problem	589
11.11.4	Elder Problem	593
11.11.5	Salt Lake Problem	601
11.11.6	High Concentration Flow Through a Column	606
11.11.7	Saltpool Problem.....	607
11.11.8	Pringle et al.'s Double-Diffusive Finger Convection Problem	611
12	Mass Transport in Porous Media with and Without Chemical Reactions.....	625
12.1	Introduction	625
12.2	Basic Equations	625
12.2.1	3D, Vertical 2D and Axisymmetric Problems	625
12.2.2	Horizontal 2D Problems	629

12.3	Finite Element Formulation	631
12.3.1	Weak Forms	631
12.3.2	GFEM and Resulting Nonlinear Matrix System	633
12.3.3	Adaptive SIA-Based Solution Strategy for Multispecies Mass Transport Embedded in the GLS Predictor-Corrector Time Integrator	636
12.4	Mass Budget Analysis	640
12.5	Examples	642
12.5.1	Single-Species Solute Advective- Dispersive-Decay Transport in a Column	642
12.5.2	Hydrodispersive Mixing of Single-Species Solute in a Bilayered Aquifer	645
12.5.3	Multispecies Mass Transport with Comparison to Analytical Solutions	649
12.5.3.1	Sun et al.'s 1D Serial-Parallel Reaction Problem	649
12.5.3.2	Sun et al.'s 3D First-Order Degradation Reaction Kinetics Problem...	652
12.5.3.3	Rate-Limited Desorption and Decay: Comparison to Fry et al.'s Analytical Solution	654
12.5.3.4	Two-Site Equilibrium/Kinetic Sorption with Degradation: Comparison to STANMOD Analytical Solutions	659
12.5.4	Multispecies Mass Transport of Sequential and Nonsequential Chlorinated Solvents Degradation Under Variable Aerobic-Anaerobic Conditions	663
13	Heat Transport in Porous Media	673
13.1	Introduction	673
13.2	Basic Equations	674
13.2.1	3D, Vertical 2D and Axisymmetric Problems	674
13.2.2	Horizontal 2D Problems	676
13.3	Finite Element Formulation	678
13.3.1	Weak Forms	678
13.3.2	GFEM and Resulting Matrix System	679
13.3.3	Time Integration	681
13.4	Heat Budget Analysis	681
13.5	Incorporation of Borehole Heat Exchangers (BHE's)	683
13.5.1	Introduction	683
13.5.2	Implementation of BHE's	685

	13.5.2.1	Analytical BHE Solution	686
	13.5.2.2	Numerical BHE Solution	688
	13.5.3	Suitable Meshing of BHE Nodes	690
13.6	Examples	692
	13.6.1	Heat Transport for a Well Doublet System in a Layered Aquifer: 3D Modeling in Comparison to Analytical Solution	692
	13.6.2	Numerical vs. Analytical Solutions of BHE for Steady-State Conditions and Given Temperature at Borehole Wall	697
	13.6.3	Transient Solution of Coaxial BHE System	697
	13.6.4	BHE Solution Versus Fully Discretized 3D Model (FD3DM) Solution Applied to a 2U Exchanger	705
14	Discrete Feature Modeling of Flow, Mass and Heat Transport Processes	711
14.1	Introduction		711
14.2	Discrete Feature Master Equations		711
14.3	Finite Element Formulation		713
	14.3.1	Weak Form	713
	14.3.2	GFEM and Resulting Matrix System	714
	14.3.3	Assembly of DFE's into the Global System Matrix	715
		14.3.3.1 Need for Coordinate Transformation	715
		14.3.3.2 Determination of the Directional Cosines A^e of DFE e	716
	14.3.4	Implicit Monolithic Solution of the Coupled Discrete Fracture and Porous-Medium Equations	721
	14.3.5	Time Integration	722
14.4	Computation of Velocity Fields and Budget Analysis		722
14.5	Examples		724
	14.5.1	Solute Diffusion into Porous Matrix from a Single Fracture	724
	14.5.2	Density-Dependent Solute Transport in a 45°–Inclined Single Fracture Embedded in a Low-Permeable Porous Matrix	731
	14.5.3	Wendland and Himmelsbach's Experiment: Solute Transport in a 3D Fracture-Matrix System	736
	14.5.4	Flow and Solute Transport in a Fracture Network of Rock Mass	741
	14.5.5	Thermohaline Variable-Density Convection in an Aquifer-Aquitard-Aquifer System with Abandoned Borehole	746

15	Specific Topics	757
15.1	Finite Element Meshing	757
15.1.1	General	757
15.1.2	Mesh Generation	760
15.1.2.1	Transport Mapping	760
15.1.2.2	Advancing Front Technique	764
15.1.2.3	Delaunay-Voronoi Method	766
15.1.3	Mesh Quality Enhancement	770
15.1.3.1	Element Removal, Diagonal Swapping and Selective Mesh Movement	771
15.1.3.2	Mesh Smoothing	771
15.1.4	Prismatic Mesh Topologies	772
15.1.5	Mesh Refinement and Derefinement	774
15.1.6	Adaptive Mesh Refinement (AMR)	776
15.2	Particle Tracking Techniques	786
15.2.1	General	786
15.2.2	Pollock's Semianalytical Tracking Method	789
15.2.3	Numerical 4th-Order Runge-Kutta Tracking Method	792
15.3	Streamline Computation	796
15.3.1	Introduction	796
15.3.2	Streamline and Streamfunction	797
15.3.3	Streamline Integration via Vorticity Equation	799
15.3.4	Streamline Integration via Boundary Integral	800
15.3.5	Discussion	801
15.4	Interpolation on Finite Elements	802
15.4.1	Scope	802
15.4.2	Accomplishment of Reverse Transformation for Isoparametric Elements	803
A	Nomenclature	809
A.1	Roman Letters	809
A.2	Greek Letters	817
A.3	Subscripts	820
A.4	Superscripts	821
A.5	Special Symbols	822
B	Coleman and Noll Method	825
C	Thermally Variable Fluid Density Expansion $\beta^f(T^f)$	829

D	Parametric Models for Variably Saturated Porous Media	833
D.1	Definitions	833
D.2	Analytic Saturation $s(\psi)$ and Inverse Capillary Pressure $\psi(s)$ —Relations	833
D.2.1	Van Genuchten (VG) Relationship	833
D.2.2	Brooks-Corey Relationship	834
D.2.3	Haverkamp Relationship	835
D.2.4	Exponential Relationship	836
D.2.5	Linear Relationship	836
D.2.6	Time-Centered Analytic Moisture Capacity Evaluation	837
D.3	Analytic Relative Permeability $k_r(s)$ and $k_r(\psi)$ —Relations	837
D.3.1	Van Genuchten-Mualem (VGM) Relationship	837
D.3.2	Brooks-Corey Relationship	838
D.3.3	Modified van Genuchten Relationship	839
D.3.4	Haverkamp Relationship	840
D.3.5	Exponential Relationship	840
D.3.6	Linear Relationship	841
D.4	Spline Approximation of Retention and Relative Permeability Curves	841
D.4.1	Definition of Cubic Spline	843
D.4.2	$s(\psi)$ —Dependency	844
D.4.2.1	Continuation to Minus Infinity	844
D.4.2.2	Monotonic Spline Curve	844
E	Heat Transfer and Thermal Resistance for Wall Configurations	847
E.1	Conduction Heat Transfer	847
E.1.1	Single and Composite Plane Wall	847
E.1.2	Single and Composite Circular Pipe Wall	849
E.2	Heat Transfer Coefficient, Thermal Resistance and Specific Thermal Resistance	850
E.3	Thermal Circuits of Prototypical Configurations in Boreholes	853
E.3.1	Delta Configuration	853
E.3.2	Y Configuration	853
F	Optimality of the Galerkin Method	855
G	Isoparametric Finite Element Shape Functions and Their Derivatives	859
G.1	One Dimension	859
G.2	Two Dimensions	860
G.3	Three Dimensions	861

H	Analytical Evaluation of Element Matrices and Vectors	863
H.1	Linear 1D Element	863
H.2	Linear 2D Triangle	866
H.3	Linear 3D Tetrahedron	871
H.4	Simplified Element Shapes in 2D and 3D to Attain Constant Jacobians	880
H.4.1	Linear Quadrilateral Element as Parallelogram or Rectangle	880
H.4.2	Linear Hexahedral Element as Parallelepiped or Brick	881
H.4.3	Linear Pentahedral Element as Triangular Prism with Parallel Top and Bottom Surfaces	884
H.4.4	Linear Pyramidal Element with Parallelogram or Rectangular Base and Oblique Shape	887
I	Parameters in Relation to Selected Problem Class, Medium Type and Dimension	891
I.1	Flow	892
I.2	Mass Transport	897
I.3	Heat Transport	900
J	Elements of PVST for Solving the Mixed $\psi - s$-Based Form of Richards' Equation	903
J.1	Jacobian \mathbf{J}^ψ for the Pressure Head ψ as Primary Variable	903
J.2	Jacobian \mathbf{J}^s for the Saturation s as Primary Variable	904
J.3	Chord Slope Approximations of Saturation Derivatives	906
K	Integral Functions of the Frolkovič-Knabner Algorithm (FKA)	909
K.1	Transformations in Local Coordinates	909
K.2	FKA Formulation	910
K.3	The Nodal Quantities $H_{\xi J}^e, H_{\eta J}^e, H_{\zeta J}^e$ of the Integral Functions	911
K.3.1	2D Linear Triangular Element	911
K.3.2	2D Linear Quadrilateral Element	912
K.3.3	3D Linear Pentahedral (Triangular Prismatic) Element	913
K.3.4	3D Linear Hexahedral (Brick) Element	915
K.3.5	3D Linear Pyramidal Element	916
L	Formulation of Hydraulic Head BC's for Variable-Density Problems	919
L.1	Problem Description	919
L.2	Reference Potential from Measured Heads	919
L.3	Hydrostatic Condition	921

M	BHE Modeling: Numerical and Analytical Approaches	925
M.1	Types of BHE	925
M.1.1	Double U-Shape Pipe (2U)	925
M.1.2	Single U-Shape Pipe (1U)	926
M.1.3	Coaxial Pipe with Annular (CXA) and Centered (CXC) Inlet	927
M.2	Thermal Resistances	928
M.2.1	2U Exchanger	929
M.2.1.1	Thermal Resistance Due to the Advective Flow of Refrigerant in the Pipes	929
M.2.1.2	Thermal Resistances Due to the Pipes Wall Material and Grout Transition	930
M.2.1.3	Thermal Resistance Due to Inter-grout Exchange	930
M.2.1.4	Thermal Resistance Due to Grout-Soil Exchange	931
M.2.2	1U Exchanger	931
M.2.2.1	Thermal Resistance Due to the Advective Flow of Refrigerant in the Pipes	931
M.2.2.2	Thermal Resistance Due to the Pipes Wall Material and Grout Transition	931
M.2.2.3	Thermal Resistance Due to Inter-grout Exchange	932
M.2.2.4	Thermal Resistance Due to Grout-Soil Exchange	932
M.2.3	CXA Exchanger	932
M.2.3.1	Thermal Resistance Due to the Advective Flow of Refrigerant in the Pipes	933
M.2.3.2	Thermal Resistance Due to the Pipes Wall Material and Grout Transition	934
M.2.3.3	Thermal Resistance Due to Grout-Soil Exchange	934
M.2.4	CXC Exchanger	934
M.2.4.1	Thermal Resistance Due to the Advective Flow of Refrigerant in the Pipes	935
M.2.4.2	Thermal Resistance Due to the Pipes Wall Material and Grout Transition	936

	M.2.4.3	Thermal Resistance Due to Grout-Soil Exchange	936
M.2.5		Notes to Negative Thermal Resistances of Grout for 2U and 1U Exchangers	937
M.2.6		Direct Use of Borehole Thermal Resistances R_a and R_b Obtained from Thermal Response Test (TRT)	937
	M.2.6.1	Analytical BHE Solution	938
	M.2.6.2	Numerical BHE Solution	939
M.3		Heat Transfer Coefficients	940
M.4		Analytical Solution of the Local Problem	942
	M.4.1	Local Steady-State Condition with Given Temperature at Borehole Wall.....	942
	M.4.2	Eskilson and Claesson's Analytical BHE Solution.....	943
	M.4.3	Solutions for 1U and 2U Configurations	944
	M.4.4	Solution for CXA Configuration	947
	M.4.5	Solution for CXC Configuration	949
	M.4.6	Resulting Exchange Terms	951
M.5		Numerical Solution of the Local Problem	952
	M.5.1	Basic BHE Equations of Heat Transport in Pipes and Grout Zones.....	952
	M.5.2	Finite Element Discretization of the BHE Equations	953
