

Contents

1	Introduction	1
2	Development of Patch Clamping	3
2.1	Conventional Patch Clamping Technique	3
2.1.1	Conventional Patch Clamp Configurations	4
2.2	Other Methods for Measuring Ion Channel Activities	7
2.3	Attempts to Improve Patch Clamping	7
2.3.1	Automation of Conventional Patch Clamping	8
2.3.2	Planar and Lateral Patch Clamping	9
2.4	Comparison of Patch Clamping Methods	13
	References	15
3	Gigaseal Formation	17
3.1	Glass Structure	17
3.2	Membrane Structure	18
3.3	Mechanism of Gigaseal Formation	20
3.4	Important Factors in Gigaseal Formation	25
3.4.1	Cleanliness	25
3.4.2	Roughness	26
3.4.3	Hydrophilicity	26
3.4.4	Tip Size	26
3.4.5	Roundness	27
3.4.6	Other Factors	27
	References	27
4	Effect of Roughness on Gigaseal Formation	29
4.1	Glass Micropipette Fabrication	29
4.2	Measurement of Roughness	30
4.2.1	SEM Stereoscopic Technique	31
4.3	Polishing Pipette Tips by Focused Ion Beam Milling	35
4.4	Patch Clamping Experiments	36
4.5	Finite Element Modelling	40

4.5.1	Patch Clamp Manipulators	40
4.5.2	Pipette Tip Profile.	41
4.5.3	Finite Element Modelling of Patch Clamping	41
4.6	Summary	44
	References	45
5	Effect of Hydrophilicity on Gigaseal Formation	49
5.1	Piranha Solution Treatment	49
5.1.1	Treatment Time	50
5.1.2	Effect of Piranha Solution Treatment on Pipette Surface Roughness	51
5.1.3	Effect of Piranha Treatment on Pipette Capacitance	51
5.1.4	Piranha Solution Treatment of Glass Micropipettes	53
5.2	Oxygen Plasma Treatment	53
5.2.1	Effect of Oxygen Plasma Treatment on Pipette Capacitance	54
5.2.2	Effect of Oxygen Plasma Treatment on Surface Roughness	54
5.2.3	Oxygen Plasma Treatment of Glass Micropipettes	54
5.3	Patch Clamping Experiments	55
5.4	Discussion	56
5.5	Summary	58
	References	58
6	Effect of Tip Size on Gigaseal Formation	61
6.1	Effect of Tip Size in Patch Clamping	61
6.2	Effect of Tip Size on Gigaseal Formation	62
6.3	Measuring Surface Properties of Pipettes	63
6.3.1	3D Reconstruction of the Tip	63
6.3.2	3D Reconstruction of the Inner Wall	66
6.4	Patch Clamp Experiments	69
6.5	Discussion	70
6.6	Summary	73
	References	73
7	Study of Glass Micropipettes from Tip Formation to Characterization	75
7.1	Measuring Surface Properties of Glass Tubes	75
7.2	Effect of Pulling Parameters on Pipette Tip Size and Surface Properties.	76
7.2.1	Pulling Pipettes.	78
7.2.2	3D Reconstruction of Pipette Tips	79
7.2.3	Effect of Pulling Parameters on Pipette Surface Properties.	80
7.3	Effect of Pulling Direction on Pipette Surface Properties	82

- 7.4 3D Reconstruction of a Pipette Using FIB/SEM
 - Nanotomography 84
 - 7.4.1 Effect of Omega Dot 85
 - 7.4.2 3D Reconstruction of a Pipette. 86
- 7.5 Tip Formation. 88
- 7.6 Summary 91

Gigaseal Formation in Patch Clamping

With Applications of Nanotechnology

Malboubi, M.; Jiang, K.

2014, XI, 94 p. 81 illus., 65 illus. in color., Softcover

ISBN: 978-3-642-39127-9
