

Contents

1	Introduction	1
	References	5
2	Growth Mechanism of Silicon Nanowires	7
	References	12
3	Stability of Silicon Nanostructures	13
3.1	Thin Stable Short Silicon Nanowires	13
3.2	Energetic Stability of Silicon Nanotubes	15
3.3	Energetic Stability of Hydrogen-Terminated Silicon Nanostructures	17
3.3.1	Effects of Structural Saturation of Silicon Nanostructures	17
3.3.2	Hydrogenation of Silicon Quantum Dot Surfaces	21
3.4	Thermal Stability of Hydrogen-Terminated Silicon Nanostructures	23
3.5	Chemical Stability of Hydrogen-Terminated Silicon Nanostructures	24
3.5.1	Surface Hydride Configuration Dependence	24
3.5.2	Size-Dependent Oxidation	26
	References	28
4	Novel Electronic Properties of Silicon Nanostructures	31
4.1	Excited State Relaxation of Hydrogen-Terminated Silicon Nanodots	31
4.1.1	Size Dependency of Emission Properties	34
4.1.2	Effects of Dimerization of Si-Si Surface Bonds and Its Effects	39
4.1.3	Exciton Traps in 1D Si Nanorods	44
4.2	Direct-Indirect Energy Band Transitions of Silicon Nanowires by Surface Engineering	44

4.3	Tuning Energy Bands of 1D and 2D Silicon Nanostructures by Straining	49
4.3.1	Direct–Indirect Energy Band Transitions of 1D Silicon Nanowires	49
4.3.2	Strain-Induced Band Dispersion Engineering in 2D Si Nanosheets	52
	References	61
5	Summary and Remarks	65

Growth Mechanisms and Novel Properties of Silicon
Nanostructures from Quantum-Mechanical Calculations

Zhang, R.-Q.

2014, VIII, 66 p. 31 illus., 15 illus. in color., Softcover

ISBN: 978-3-642-40904-2
