

# Contents

|          |   |           |
|----------|---|-----------|
| <b>1</b> | <b>Rings and Polynomial Algebras</b>                  | <b>1</b>  |
| 1.1      | First Definitions                                     | 1         |
| 1.1.1    | Rings   | 1         |
| 1.1.2    | Canonical Morphisms                                   | 9         |
| 1.1.3    | Ideals  | 12        |
| 1.1.4    | Algebras  | 15        |
| 1.1.5    | Fields, Division Rings                                | 20        |
| 1.2      | Prime and Maximal Ideals, Integral Domains            | 36        |
| 1.2.1    | Definition and First Examples                         | 36        |
| 1.2.2    | Examples in Polynomial Rings                          | 37        |
| 1.2.3    | Nilradical and Radical                                | 39        |
| 1.2.4    | Integral Domains, Fields of Fractions                 | 42        |
| 1.3      | Divisibility and Irreducible Elements                 | 47        |
| 1.3.1    | Divisors and Irreducible Elements                     | 47        |
| 1.3.2    | Euclidean Rings                                       | 49        |
| 1.3.3    | GCD and LCM   | 51        |
| 1.3.4    | Case of $\mathbb{Z}[i]$ and Application               | 52        |
| 1.3.5    | Irreducibility Criteria in $R[X]$                     | 54        |
| 1.4      | Polynomial Rings in Several Indeterminates            | 66        |
| 1.4.1    | Universal Property, Substitutions                     | 66        |
| 1.4.2    | Transfer Properties                                   | 70        |
| 1.4.3    | Symmetric Polynomials                                 | 71        |
| 1.4.4    | Resultant and Discriminant                            | 76        |
| <b>2</b> | <b>Modules</b>  | <b>87</b> |
| 2.1      | Definitions and Conventions                           | 87        |
| 2.1.1    | Definitions   | 87        |
| 2.1.2    | Submodules  | 90        |
| 2.1.3    | Torsion Elements, Torsion Submodule                   | 96        |
| 2.1.4    | Free and Generating Systems, Free Modules             | 98        |
| 2.1.5    | Constructions: Direct Sums, Products, Tensor Products | 102       |

|       |  |     |
|-------|--|-----|
| 2.1.6 | Localization . . . . .   | 110 |
| 2.2   | Finitely Generated Modules . . . . .   | 115 |
| 2.2.1 | Application: Integrality over a Ring . . . . .   | 116 |
| 2.2.2 | Complement: Jacobson Rings, Hilbert's Nullstellensatz . . . . .                        | 122 |
| 2.2.3 | Noetherian Rings and Modules . . . . .   | 127 |
| 2.2.4 | Finitely Generated Free Modules . . . . .  | 132 |
| 2.2.5 | Finitely Generated Projective Modules . . . . .  | 137 |
| 2.3   | Finitely Generated Modules over Dedekind Domains . . . . .                             | 146 |
| 2.3.1 | Fractional Modules, Dedekind Domains . . . . .   | 146 |
| 2.3.2 | Finitely Generated Projective Modules over Dedekind Domains . . . . .                  | 154 |
| 2.3.3 | Remarkable Decompositions of Finitely Generated Torsion Modules . . . . .              | 159 |
| 2.3.4 | Adapted Pseudo-bases for Submodules of Finitely Generated Projective Modules . . . . . | 169 |
| 2.3.5 | Applications to Abelian Groups and Endomorphisms of Vector Spaces . . . . .            | 175 |
| 2.4   | Complement on Dedekind Domains . . . . .   | 186 |
| 2.4.1 | Characterizations of Dedekind Domains . . . . .  | 186 |
| 2.4.2 | Rings of Integers of Number Fields Are Dedekind . . . . .                              | 188 |
